Safety Precautions

SAVE THESE INSTRUCTIONS – This manual contains important instructions that should be followed during installation and maintenance of the generator set and batteries.

Before operating the generator set (genset), read the Operator's Manual and become familiar with it and the equipment. **Safe and efficient operation can be achieved only if the equipment is properly operated and maintained.** Many accidents are caused by failure to follow fundamental rules and precautions.

The following symbols, found throughout this manual, alert you to potentially dangerous conditions to the operator, service personnel, or the equipment.

⚠ DANGER *This symbol warns of immediate hazards which will result in severe personal injury or death.*

⚠ WARNING *This symbol refers to a hazard or unsafe practice which can result in severe personal injury or death.*

⚠ CAUTION *This symbol refers to a hazard or unsafe practice which can result in personal injury or product or property damage.*

FUEL AND FUMES ARE FLAMMABLE

Fire, explosion, and personal injury or death can result from improper practices.

- DO NOT fill fuel tanks while engine is running, unless tanks are outside the engine compartment. Fuel contact with hot engine or exhaust is a potential fire hazard.
- DO NOT permit any flame, cigarette, pilot light, spark, arcing equipment, or other ignition source near the generator set or fuel tank.
- Fuel lines must be adequately secured and free of leaks. Fuel connection at the engine should be made with an approved flexible line. Do not use zinc coated or copper fuel lines with diesel fuel.
- Natural gas is lighter than air, and will tend to gather under hoods. Propane is heavier than air, and will tend to gather in sumps or low areas. NFPA code requires all persons handling propane to be trained and qualified.
- Be sure all fuel supplies have a positive shutoff valve.
- Be sure battery area has been well-ventilated prior to servicing near it. Lead-acid batteries emit a highly explosive hydrogen gas that can be ignited by arcing, sparking, smoking, etc.

EXHAUST GASES ARE DEADLY

- Provide an adequate exhaust system to properly expel discharged gases away from enclosed or sheltered areas and areas where individuals are likely to congregate. Visually and audibly inspect the exhaust for leaks daily or per the maintenance schedule. Make sure that exhaust manifolds are secured and not warped. Do not use exhaust gases to heat a compartment.
- The exhaust vent should be high enough to help clear gases, avoid accumulation of snow, and in accordance with local mechanical codes.
- Be sure the unit is well ventilated.
- Engine exhaust and some of its constituents are known to the state of California to cause cancer, birth defects, and other reproductive harm.

MOVING PARTS CAN CAUSE SEVERE PERSONAL INJURY OR DEATH

- Keep your hands, clothing, and jewelry away from moving parts.

- Before starting work on the generator set, disconnect battery charger from its AC source, then disconnect starting batteries, negative (–) cable first. In lean-burn natural gas (LBNG) gensets, also make sure the starter's air supply line is disconnected or completely vented until the generator set is ready to start. This will prevent accidental starting.
- Make sure that fasteners on the generator set are secure. Tighten supports and clamps, keep guards in position over fans, drive belts, etc.
- Do not wear loose clothing or jewelry in the vicinity of moving parts, or while working on electrical equipment. Loose clothing and jewelry can become caught in moving parts.
- If adjustment must be made while the unit is running, use extreme caution around hot manifolds, moving parts, etc.

DO NOT OPERATE IN FLAMMABLE AND EXPLOSIVE ENVIRONMENTS

Flammable vapor can cause an engine to overspeed and become difficult to stop, resulting in possible fire, explosion, severe personal injury and death. Do not operate a genset where a flammable vapor environment can be created by fuel spill, leak, etc., unless the genset is equipped with an automatic safety device to block the air intake and stop the engine. The owners and operators of the genset are solely responsible for operating the genset safely. Contact your authorized Cummins Power Generation distributor for more information.

ELECTRICAL SHOCK CAN CAUSE SEVERE PERSONAL INJURY OR DEATH

- Remove electric power before removing protective shields or touching electrical equipment. Use rubber insulative mats placed on dry wood platforms over floors that are metal or concrete when around electrical equipment. Do not wear damp clothing (particularly wet shoes) or allow skin surface to be damp when handling electrical equipment. Do not wear jewelry. Jewelry can short out electrical contacts and cause shock or burning.
- Use extreme caution when working on electrical components. High voltages can cause injury or death. DO NOT tamper with interlocks.
- Follow all applicable state and local electrical codes. Have all electrical installations performed by a qualified licensed electrician. Tag and lock open switches to avoid accidental closure.
- DO NOT CONNECT GENERATOR SET DIRECTLY TO ANY BUILDING ELECTRICAL SYSTEM. Hazardous voltages can flow from the generator set into the utility line. This creates a potential for electrocution or property damage. Connect only through an approved isolation switch or an approved paralleling device.

MEDIUM VOLTAGE GENERATOR SETS (601V to 15kV)

- Medium voltage acts differently than low voltage. Special equipment and training is required to work on or around medium voltage equipment. Operation and maintenance must be done only by persons trained and qualified to work on such devices. Improper use or procedures will result in severe personal injury or death.
- Do not work on energized equipment. Unauthorized personnel must not be permitted near energized equipment. Due to the nature of medium voltage electrical equipment, induced voltage remains even after the equipment is disconnected from the power source. Plan the time for maintenance with authorized personnel so that the equipment can be de-energized and safely grounded.

GENERAL SAFETY PRECAUTIONS

- Coolants under pressure have a higher boiling point than water. DO NOT open a radiator or heat exchanger pressure cap while the engine is running. To prevent severe scalding, let engine cool down before removing coolant pressure cap. Turn cap slowly, and do not open it fully until the pressure has been relieved.
- Used engine oils have been identified by some state or federal agencies as causing cancer or reproductive toxicity. When checking or changing engine oil, take care not to ingest, breathe the fumes, or contact used oil.

- Keep multi-class ABC fire extinguishers handy. Class A fires involve ordinary combustible materials such as wood and cloth; Class B fires, combustible and flammable liquid fuels and gaseous fuels; Class C fires, live electrical equipment. (ref. NFPA No. 10).
- Make sure that rags or combustible material are not left on or near the generator set.
- Make sure generator set is mounted in a manner to prevent combustible materials from accumulating under or near the unit.
- Remove all unnecessary grease and oil from the unit. Accumulated grease and oil can cause overheating and engine damage which present a potential fire hazard.
- Keep the generator set and the surrounding area clean and free from obstructions. Remove any debris from the set and keep the floor clean and dry.
- Do not work on this equipment when mentally or physically fatigued, or after consuming any alcohol or drug that makes the operation of equipment unsafe.
- Substances in exhaust gases have been identified by some state or federal agencies as causing cancer or reproductive toxicity. Take care not to breath or ingest or come into contact with exhaust gases.
- Do not store any flammable liquids, such as fuel, cleaners, oil, etc., near the generator set. A fire or explosion could result.
- Wear hearing protection when near an operating generator set.
- To prevent serious burns, avoid contact with hot metal parts such as radiator system, turbo charger system and exhaust system.

DISPOSE OF THIS UNIT PROPERLY

THIS PAGE LEFT INTENTIONALLY BLANK

1. PCC 1301/PowerCommand 1.x/PS0500 Modbus Register Map

The controller contains data that can be read by a remote device communicating via Modbus RTU protocol on a two-wire RS-485 master/slave multi-drop bus. In this arrangement the remote device is the master and the controller is the slave.

For more information about the Modbus protocol, refer to Modbus Application *Protocol v1.1a and Mod-*

bus Serial Line Implementation Guide v1.0, both available at www.modbus.org.

Multi-Drop Network Mode Pins

- Hi (+) TB2-3
- Lo (-) TB2-4
- Shield TB2-1

Note: Earlier versions of software may not support all of the Modbus registers in the following table. If a particular register is not available in your installation, it is possible that the Modbus connection is working but the controller software does not support that particular register.

Note: For the PS0500 control, Modbus functionality is ONLY available from software version 6.02 and later.

Note: If an address or bit is not listed in this table it is not used.

Note: The external device can read 1–40 contiguous registers, write 1–40 contiguous registers, or read diagnostic counters.

Addr.	Parameter	Access	Specifications	Description	Control
40004	Save Trims	Read and Write	0: No action 1: Save Unconditional	Save adjustments saves to non volatile memory all the write parameters listed in this table	PC1.x, PS0500, PCC1301
40009	Controller Type	Read Only	Multiplier: 1 Size(Bits): 8 Sign: U Lower Limit: 0 Upper Limit: 255	Device type of Controller	PC1.x, PS0500, PCC1301
40010	Operation Mode Switch Position	Read Only	0: Off 1: Auto 2: Manual	Current position of the generator set switch panel off–Run–Auto switch as seen by the generator set control	PC1.x, PS0500, PCC1301
40011	Genset State	Read Only	0: Stop 1: Ready 2: Preheat 3: Precrank 4: Crank 5: Disconnect	The parameter reflects current state of genset	PC1.x, PS0500, PCC1301
40012	Active Fault	Read Only	Multiplier: 1 Offset: 0 Size(Bits) 16 Sign: U Units: NA Lower Limit: 0 Upper Limit: 65535 Default: 0	This register contains the fault code number of currently active fault. See service manual for list of supported fault codes.	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40013	Active Fault Type	Read Only	0: Normal 1: Warning 4: Shutdown	Fault Type This register contains the fault type of currently active fault	PC1.x, PS0500, PCC1301
40016	NFPA 110 fault register	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: NA Lower Limit: NA Upper Limit: NA Default: NA	16 bit number to represent the status of the NFPA110 logical. (See Section 4 Table 4-1)	PC1.x, PS0500, PCC1301
40017	Extended Annunciation fault register	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: NA Lower Limit: NA Upper Limit: NA Default: NA	16 bit number to represent the status of the NFPA110 logical. (See Section 4 Table 4-1)	PC1.x, PS0500, PCC1301
40018	Alternator L1-N Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L1-N Voltage	PC1.x, PS0500, PCC1301
40019	Alternator L2-N Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L2-N Voltage	PC1.x, PS0500, PCC1301
40020	Alternator L3-N Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L3-N Voltage	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40022	Alternator L1–L2 Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L1–L2 Voltage	PC1.x, PS0500, PCC1301
40023	Alternator L2–L3 Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L2–L3 Voltage	PC1.x, PS0500, PCC1301
40024	Alternator L3–L1 Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set L3–L1 Voltage	PC1.x, PS0500, PCC1301
40025	Alt Voltage	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set line to line average voltage	PC1.x, PS0500, PCC1301
40026	Alternator L1 Current	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: amps Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set L1 current value	PC1.x, PS0500, PCC1301
40027	Alternator L2 Current	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: amps Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set L2 current value	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40028	Alternator L3 Current	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: amps Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set L3 current value	PC1.x, PS0500, PCC1301
40029	Genset average current	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: amps Lower Limit: 0 Upper Limit: 65535 Default: NA	Generator set average current	PC1.x, PS0500, PCC1301
40040	Alternator output volt-ampères (phase a)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kVa Lower Limit: 0 Upper Limit: 65535 Default: NA	Alternator output volt-ampères (phase a)	PC1.x, PS0500, PCC1301
40041	Alternator output volt-ampères (phase b)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kVa Lower Limit: 0 Upper Limit: 65535 Default: NA	Alternator output volt-ampères (phase b)	PC1.x, PS0500, PCC1301
40042	Alternator output volt-ampères (phase c)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kVa Lower Limit: 0 Upper Limit: 65535 Default: NA	Alternator output volt-ampères (phase c)	PC1.x, PS0500, PCC1301
40043	Alternator output volt-ampères (total)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kVa Lower Limit: 0 Upper Limit: 65535 Default: NA	Alternator output volt-ampères (total)	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40044	Average Alt Line Frequency	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 65535 Default: NA	Average alternator line frequency	PC1.x, PS0500, PCC1301
40058	Rated Alternator L1 Current (%)	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set stand by L1 current percentage output.	PC1.x, PS0500, PCC1301
40059	Rated Alternator L2 Current (%)	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set stand by L2 current percentage output.	PC1.x, PS0500, PCC1301
40060	Rated Alternator L3 Current (%)	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitors the generator set stand by L3 current percentage output.	PC1.x, PS0500, PCC1301
40061	Battery Voltage	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: Vdc Lower Limit: 0 Upper Limit: 65535 Default: NA	Value of battery voltage	PC1.x, PS0500, PCC1301
40062	Oil Pressure	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kPa Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitor point for oil pressure	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40064	Coolant Temperature	Read Only	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: degc Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitor point for Coolant Temperature	PC1.x, PS0500, PCC1301
40068	Engine Speed	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Rpm Lower Limit: 0 Upper Limit: 65535 Default: NA	Monitor point for Average Engine Speed	PC1.x, PS0500, PCC1301
40069	Total Runs	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: NA Lower Limit: 0 Upper Limit: 65535 Default: 0	Parameter reflects total number of starts	PC1.x, PS0500, PCC1301
40070	Engine Run Time (High byte) (No logical found)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Sec Lower Limit: 0 Upper Limit: 65535 Default: NA	Total Engine Run Time	PC1.x, PS0500, PCC1301
40071	Engine Run Time (Low byte) (No logical found)	Read Only	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Sec Lower Limit: 0 Upper Limit: 65535 Default: NA	Total Engine Run time	PC1.x, PS0500, PCC1301
40210	AUX101 Speed Bias	Read Only	Multiplier: 0.01 Offset: 0 Size(Bits): 16 Sign: S Units: RPM Lower Limit: -100 Upper Limit: 100 Default: NA	AUX101 Speed Bias	PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
40211	AUX101 Voltage Bias	Read Only	Multiplier: 0.01 Offset: 0 Size(Bits): 16 Sign: S Units: Volt Lower Limit: -100 Upper Limit: 100 Default: NA	AUX101 Voltage Bias	PCC1301
40300	Genset start stop control via Modbus (No logical)	Read and Write	0: Stop 1: Start	Remote start via Modbus	PC1.x, PS0500, PCC1301
40301	Fault reset via Modbus (No logical)	Read and Write	0: Inactive 1: Active	Fault reset	PC1.x, PCC1301
40302	Genset E-stop switch via Modbus (No logical)	Read and Write	0: E-stop Inactive 1: E-stop active	Status of E-stop switch	PC1.x, PS0500, PCC1301
43000	Alternator Nominal Voltage	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Vac Lower Limit: 190 Upper Limit: 600 Default: 208	This register represents Alternator nominal voltage	PC1.x, PS0500, PCC1301
43001	Generator Frequency Select	Read and Write	0: 60 Hz 1: 50 Hz	Nominal alternator voltage setting	PC1.x, PS0500, PCC1301
43002	Number of Phases	Read and Write	0: Single Phase 1: Three Phase	Alternator phase setting	PC1.x, PS0500, PCC1301
43003	Connection Type	Read and Write	0: Delta 1: Wye	Alternator connection type	PC1.x, PS0500, PCC1301
43004	Glow Plug Enable	Read and Write	0: Disable 1: Enable	Glow plug driver feature enable	PC1.x, PS0500, PCC1301
43005	Charging Alternator Functions Disable	Read and Write	0: Disable 1: Enable	Used to disable the controller related charging alt functions.	PC1.x, PS0500, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
43006	Start Time Delay	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Sec Lower Limit: 0 Upper Limit: 300 Default: 0	Remote start time delay setting	PC1.x, PS0500, PCC1301
43007	Stop Time Delay	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Sec Lower Limit: 0 Upper Limit: 600 Default: 0	Remote stop time delay setting	PC1.x, PS0500, PCC1301
43008	Cycle Crank Attempts	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: NA Lower Limit: 1 Upper Limit: 7 Default: 3	Maximum number of start attempts for cycle crank mode	PC1.x, PS0500, PCC1301
43009	Cycle Crank Engage Time	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: sec Lower Limit: 3 Upper Limit: 30 Default: 15	Maximum starter engage time for cycle crank mode	PC1.x, PS0500, PCC1301
43010	Cycle Crank Reset Time	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: sec Lower Limit: 0 Upper Limit: 60 Default: 30	Engine starting cycle crank attempts setting	PC1.x, PS0500, PCC1301
43011	Fault bypass (battle short) feature enable	Read and Write	0: Disable 1: Enable	Operator panel Enable for Battle Short	PC1.x, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
43012	Battle Short Switch Input	Read and Write	0: None, 1: Configurable Input #1, 2: Configurable Input #2, 3: Configurable Input #3, 4: Configurable Input #4, 5: Operator Panel	Switch Input for Battle Short. 0= None 1=Customer Input 1 2=Customer Input 2 3 =Customer Input 3 4 =Customer Input 4 5=Operator Panel PCC1301 Modbus mapping for parameters having different limits as compare to PC1.x and PS0500 See Table 1-1 NOTE: For PC1.x SW versions <2.73, 'Battle Short Switch Input' range is 0 to 3. For PC1.x SW versions 2.73 and greater 'Battle Short Switch Input' range is 0 to 5	PC1.x
43013	AVR Enable	Read and Write	0: Disable 1: Enable	Automatic voltage regulation Enable	PC1.x, PCC1301
43014	V/Hz Knee Frequency	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: S Units: Hz Lower Limit: 0 Upper Limit: 1000 Default: 500	Automatic voltage regulator volts per hertz roll off knee setting	PC1.x, PCC1301
43015	V/Hz Rolloff Slope	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: %v/Hz Lower Limit: 0 Upper Limit: 50 Default: 22	Automatic voltage regulator volts per hertz roll off slope setting	PC1.x, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
43016	AVR Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 5 Upper Limit: 1000 Default: 100	Automatic voltage regulator gain setting	PC1.x, PCC1301
43017	AVR K2 Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 5 Upper Limit: 1000 Default: 100	Automatic voltage regulator K2 gain setting	PC1.x, PCC1301
43018	AVR D Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 95 Upper Limit: 105 Default: 100	Automatic voltage regulator K2 gain setting	PC1.x, PCC1301
43019	Electronic Governor Enable	Read and Write	0: Disable 1: Enable	Electronic governor enable feature	PC1.x, PCC1301
43020	Initial Crank Fueling Command	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 500 Default: 250	Electronic governing initial duty cycle setting	PC1.x, PCC1301
43021	Initial Crank Fueling Period	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 8 Sign: U Units: % Lower Limit: 0 Upper Limit: 100 Default: 20	Time spent at Initial Crank Fueling Command	PC1.x, PCC1301

Addr.	Parameter	Access	Specifications	Description	Control
43022	Crank Fueling Ramp Rate	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: %/sec Lower Limit: 50 Upper Limit: 1000 Default: 250	Electronic governing start ramp duty cycle setting	PC1.x, PCC1301
43023	Maximum Crank Fueling	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 500 Upper Limit: 1000 Default: 1000	Electronic governing maximum duty cycle setting	PC1.x, PCC1301
43024	Governor Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 5 Upper Limit: 1000 Default: 100	Electronic governing gain setting	PC1.x, PCC1301
43025	Gov K2 Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 5 Upper Limit: 1000 Default: 100	Electronic governor K2 gain setting	PC1.x, PCC1301
43026	Gov D Gain Adjust	Read and Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 95 Upper Limit: 105 Default: 100	Electronic governor damping adjustment	PC1.x, PCC1301
43027	Crank Exit Fueling Command	Read and Write	Multiplier: 0.1 Offset: 0 Size(Bits): 16 Sign: U Units: % Lower Limit: 0 Upper Limit: 1000 Default: 250	Electronic governing crank exit fuel duty cycle setting	PC1.x, PCC1301

THIS PAGE LEFT INTENTIONALLY BLANK

2. PowerCommand 2.x/3.x Modbus Register Map

Use the following equation to calculate the value of 32-bit parameters.

A = high register value

B = low register value

parameter = (A * 65536 * multiplier) + (B * multiplier)

For example, Engine Running Time is a 32-bit parameter in registers 40070 and 40071.

Register 40070 has 322 (high register value = A).

Register 40071 has 15637 (low register value = B).

Engine Running Time = (322 * 65536 * 0.1) + (15637 * 0.1)

The engine run-time is 2111823 seconds, or 586.6 hours.

To write a 32-bit value to 2 modbus registers, calculate the value for each register as follows:

A (High register value) = INT ((Parameter / Multiplier) / 65536))

B (Low register value) = INT ((Parameter / Multiplier) % (65536))

% = Modulus (the remainder of integer division)

For example:

To write Load Demand Genset Run Hours = 80000.5

Register 40769 (high register value A) should be written to INT ((80000.5/0.1)/65536) = 12

Register 40770 (low register value B) should be written to INT ((80000.5/0.1)%65536) = 13573

To write 32-bit values to 2 modbus addresses always write the high register value followed by the low register value. Both registers must be written to change the 32-bit value in the control.

Note: Earlier versions of software may not support all of the Modbus registers in the following table. If a particular register is not available in your installation, it is possible that the Modbus connection is working but the controller software does not support that particular register.

Note: If an address or bit is not listed in this table it is not used.

Note: The external device can read 1–40 contiguous registers, write 1–40 contiguous registers, or read diagnostic counters.

Note: The Lowest modbus register value is considered as the High Register Value and the highest modbus register value is considered as the low Register Value.

Addr.	Parameter	Access	Specifications		Description	Function	Control
40010	Control Switch Position	Read Only	0: Off 1: Auto 2: Manual		Current position of the generator set switch panel Off–Run–Auto switch as seen by the generator set control. SEE ALSO ADDRESS 40580. NOTE: Both address 40580 and 40010 show the same information however the specification for each is different.		PC 2.x, PC 3.x
40012	Most Recent Fault or Warning	Read Only	Multiplier: 1	Unit: Fault Code	This Modbus Register displays most recent Fault or Warning. It is not mapped with any logical.		PC 2.x, PC 3.x

			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40199	Genset Negative Sequence Current %	Read Only	Multiplier: 0.01	Unit: %	Generator set Negative Sequence Current as Percent of Standby Current Rating		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40201	Coolant Temperature Sensor Type	Read Only	0: PGBU		Either PGBU(Onan) or EBU(Cummins) sensor. MODBUS Access: Read Only		PC 2.x, PC 3.x
			1: EBU				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40207	Battery Charger Alternator Flash Voltage	Read Only	Multiplier: 0.001	Unit: Vdc	The Battery Charger Alternator Flash Voltage after all scaling and validity checks.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 35			
			Sign: U				
40210	External Speed Bias Input	Read Only	Multiplier: 0.01	Unit: %	Monitor point for the external speed bias input.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -100			
			Size (bits): 16	Upper Limit: 100			
			Sign: S				
40211	External Voltage Bias Input	Read Only	Multiplier: 0.01	Unit: %	Monitor point for the external voltage bias input.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -100			
			Size (bits): 16	Upper Limit: 100			
			Sign: S				
40226	Speed Bias Output / Configurable Analog output #1 Output Predictor	Read Only	Multiplier: 0.01	Unit: Vdc	Configurable analog output voltage output value (predicted)		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40227	Voltage Bias Output / Configurable Analog output #2 Output Predictor	Read Only	Multiplier: 0.01	Unit: Vdc	Configurable analog output voltage output value (predicted)		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40228	Amber Warning Lamp Status	Read Only	0: Inactive		Engine Control System indicates a warning condition.		PC 2.x, PC 3.x
			1: Active				
40229	Barometric Absolute Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Barometric Absolute Pressure. Displayed as "Ambient Pressure" in the HMI.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40230	Boost Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Boost Absolute Pressure		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40231	CAN Datalink Status	Read Only	0: Inactive		Indicates the status of the CAN datalink		PC 2.x, PC 3.x
			1: Active				
			2: Failed				
40232	Crankcase Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Crankcase Pressure.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -35.67			
			Size (bits): 16	Upper Limit: 38			
			Sign: S				
40235	ECM Derate Request	Read Only	0: No Derate Request		Request made by the ECS for a reduction in load		PC 2.x, PC 3.x
			1: Derate Request				
			2: Error				
			3: Don't Care				
40236	Engine Application Type	Read Only	0: ECM		Monitor point for the output of the Engine application type. Either ECM (CAN) or Hydro-Mechanical.		PC 2.x, PC 3.x
			1: Hydro-Mechanical				
40242	Aftercooler Temperature	Read Only	Multiplier: 0.1	Unit: degF	Monitor point for the Aftercooler Temperature.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 410			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Sign: S				
40254	Fuel Supply Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Fuel Supply Pressure. Displayed as "Fuel Supply Pressure" in the HMI.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 145			
			Sign: U				
40258	Fuel Outlet Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Fuel Outlet Pressure Pressure. Displayed as "Fuel Rail Pressure" in the HMI.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 36404			
			Sign: U				
40259	Fuel Outlet Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Fuel Outlet Pressure Pressure. Displayed as "Fuel Rail Pressure" in the HMI.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 36404			
			Sign: U				
40260	Intake Manifold 2 Temperature	Read Only	Multiplier: 0.1	Unit: degF	Monitor point for the Intake Manifold 2 Temperature		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 410			
			Sign: S				
40261	Intake Manifold 3 Temperature	Read Only	Multiplier: 0.1	Unit: degF	Monitor point for the Intake Manifold 3 Temperature		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 410			
			Sign: S				
40264	Percent Engine Torque/Duty Cycle	Read Only	Multiplier: 1	Unit: %	Monitor point for the percent engine torque output and the governor percent duty cycle output when used with the HM ECM		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit:			
			Sign: S				
40276	Post-Filter Oil Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Post-Filter Oil Pressure		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 145			
			Sign: U				
40277	Pre-Filter Oil Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Pre-Filter Oil Pressure		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 145			
			Sign: U				
40278	Configurable Input #14 Switch	Read Only	0: Inactive		Configurable Input #14 input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
40279	Turbocharger 1 Speed	Read Only	Multiplier: 1	Unit: RPM	Monitor point for the Turbocharger 1 Speed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 257000			
			Sign: U				
40280	Turbocharger 1 Speed	Read Only	Multiplier: 1	Unit: RPM	Monitor point for the Turbocharger 1 Speed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 257000			
			Sign: U				
40281	Turbocharger 2 Boost Pressure	Read Only	Multiplier: 0.1	Unit: psi	Monitor point for the Turbocharger 2 Boost Pressure		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40282	Water in Fuel Indicator	Read Only	0: No		Water in Fuel Indication		PC 2.x, PC 3.x
			1: Yes				

Addr.	Parameter	Access	Specifications		Description	Function	Control

40717	NFPA 110 Logical Status (Modlon)	Read Only	Multiplier: 1	Unit:	This Modbus register is created for modlon register mapping. 32-bit number to represent the status of the NFPA 110 logical. (See Section 4 Table 1-1 page 26).		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 32	Upper Limit:			
			Sign: U				
40718	Genset Frequency OP (Modlon)	Read Only	Multiplier: 0.1	Unit: Hz	This Modbus register is created for modlon register mapping. Generator set Frequency OP. Modbus has different multiplier than PCCnet. For Modlon use only, Multiplier/Units = 0.1 Hz		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40719	Genset Total Power Factor (Modlon)	Read Only	Multiplier: 0.00005	Unit: PF	This Modbus register is created for modlon register mapping. Generator set total power factor (L1+L2+L3). Modbus and PCCnet has different multiplier value. For Modlon, use 0.00005 PF.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40720	Genset Total kVA (Modlon)	Read Only	Multiplier: 1	Unit: kVA	This Modbus register is created for modlon register mapping. Generator set total kVA		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40721	Genset Total kW (Modlon GenACData)	Read Only	Multiplier: 1	Unit: kW	This Modbus register is created for modlon register mapping. Generator set total kW in Gen AC Data.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40722	Genset Total kVAR (Modlon)	Read Only	Multiplier: 1	Unit: kVAR	This Modbus register is created for modlon register mapping. Generator set total kVAR		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40723	Genset L1L2 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L1L2 voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40724	Genset L2L3 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L2L3 voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40725	Genset L3L1 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L3L1 voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40726	Genset L1N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L1N voltage		PC 3.x
			Offset: 0	Lower Limit:			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit:			
			Sign: U				
40727	Genset L2N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L2N voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40728	Genset L3N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Generator set L3N voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40729	Genset L1 Current (Modlon)	Read Only	Multiplier: 1	Unit: Amps	This Modbus register is created for modlon register mapping. Monitors the generator set L1 current value.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40730	Genset L2 Current (Modlon)	Read Only	Multiplier: 1	Unit: Amps	This Modbus register is created for modlon register mapping. Generator set L2 current		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40731	Genset L3 Current (Modlon)	Read Only	Multiplier: 1	Unit: Amps	This Modbus register is created for modlon register mapping. Generator set L3 current		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40732	Genset % Standby L1 Current (Modlon)	Read Only	Multiplier: 0.5	Unit: %	This Modbus register is created for modlon register mapping. Monitors the generator set standby L1 current percentage output. Modbus and PCCnet have different multiplier value. For modlon use 0.5 %		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40733	Genset % Standby L2 Current (Modlon)	Read Only	Multiplier: 0.5	Unit: %	This Modbus register is created for modlon register mapping. Monitors the generator set standby L2 current percentage output. Modbus and PCCnet has different multiplier value. For Modlon, use 0.5 %		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40734	Genset % Standby L3 Current (Modlon)	Read Only	Multiplier: 0.5	Unit: %	This Modbus register is created for modlon register mapping. Monitors the generator set standby L3 current percentage output. Modbus and PCCnet has different multiplier value. For Modlon use 0.5 %		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40735	Battery Voltage (Modlon)	Read Only	Multiplier: 0.1	Unit: Vdc	This Modbus register is created for modlon register mapping. Battery voltage value. Modbus and PCCnet has different multiplier value. For Modlon use 0.1volts		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40736	Oil Pressure (Modlon)	Read Only	Multiplier: 0.1	Unit: kPa	This Modbus register is created for modlon register mapping. Monitor point for the Oil Pressure. Modbus and PCCnet have different multiplier value. For modlon, use 0.1 KPA		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40737	Oil Temperature (Modlon)	Read Only	Multiplier: 0.1	Unit: degK	This Modbus register is created for modlon register mapping. Monitor point for the Oil Temperature. Modbus and PCCnet has different multiplier value. For Modlon use 0.1 deg Kelvin		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40738	Coolant Temperature (Modlon)	Read Only	Multiplier: 0.1	Unit: degK	This Modbus register is created for modlon register mapping. Monitor point for the Coolant Temperature. Modbus and PCCnet has different multiplier value. For Modlon, use 0.1deg Kelvin.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
40739	Intake Manifold Temperature (Modlon)	Read Only	Multiplier: 0.1	Unit: degK	This Modbus register is created for modlon register mapping. To monitor Intake Manifold Temperature. Modbus and PCCnet has different multiplier value. For Modlon, use 0.1 deg Kelvin		PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 410			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40740	Fuel Temperature (Modlon)	Read Only	Multiplier: 0.1	Unit: degK	This Modbus register is created for modlon register mapping. Monitor point for the Fuel Temperature. Modbus and PCCnet has different multiplier value. For Modlon, use 0.1 deg Kelvin.		PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 410			
			Sign: S				
40741	Fuel Rate (Modlon)	Read Only	Multiplier: 0.01	Unit: gal/hr	This Modbus register is created for modlon register mapping. Monitor point for the Fuel Rate. Modbus and PCCnet has different multiplier value. For Modlon, use 0.01 gph		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40742	Average Engine Speed (Modlon)	Read Only	Multiplier: 1	Unit: RPM	This Modbus register is created for modlon register mapping. Monitor point for the Average Engine Speed. Modbus and PCCnet have different multiplier value. For Modlon, use 1 RPM.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40743	Total Number of Runs (Modlon)	Read Only	Multiplier: 1	Unit:	This Modbus register is created for modlon register mapping. Total number of generator set runs.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 4294967295			
			Sign: U				
40744	Engine Running Time (Modlon)	Read Only	Multiplier: 0.1	Unit: seconds	This Modbus register is created for modlon register mapping. Total engine run time. Modbus has different multiplier than PCCnet. For Modbus, use 0.1 sec		PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40745	Engine Running Time (Modlon)	Read Only	Multiplier: 0.1	Unit: seconds	This Modbus register is created for modlon register mapping. Total engine run time. Modbus has different multiplier than PCCnet. For Modbus, use 0.1 sec		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40746	Genset Total Net kWh (Modlon)	Read Only	Multiplier: 1	Unit: kWh	This Modbus register is created for modlon register mapping. Generator set total net kWh accumulation		PC 3.x
			Offset: 0	Lower Limit: -2147483648			
			Size (bits): 32	Upper Limit: 2147483643			
			Sign: S				
40747	Genset Total Net kWh (Modlon)	Read Only	Multiplier: 1	Unit: kWh	This Modbus register is created for modlon register mapping. Generator set total net kWh accumulation		PC 3.x
			Offset: 0	Lower Limit: -2147483648			
			Size (bits): 32	Upper Limit: 2147483643			
			Sign: S				
40748	Total Fuel Consumption (Modlon)	Read Only	Multiplier: 0.01	Unit: gallons	This Modbus register is created for modlon register mapping. Total fuel consumption since start of engine. Modbus and PCCnet has different multiplier value. For Modlon, use 0.01 Gallons		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 32	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40749	Total Fuel Consumption (Modlon)	Read Only	Multiplier: 0.01	Unit: gallons	This Modbus register is created for modlon register mapping. Total fuel consumption since start of engine. Modbus and PCCnet has different multiplier value. For Modlon, use 0.01 Gallons		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 32	Upper Limit:			
			Sign: U				
40750	Utility/Gen-set Bus Frequency (Modlon)	Read Only	Multiplier: 0.1	Unit: Hz	This Modbus register is created for modlon register mapping. Utility line frequency or Generator set Bus Frequency depending on Paralleling Application. Modbus and PCCnet has different multiplier value. For Modlon, use 0.1 Hz.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40751	Utility/Gen-set Bus L1L2 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L1L2 Voltage or Generator set Bus L1L2 voltage depending on paralleling application.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40752	Utility/Gen-set Bus L2L3 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L2L3 voltage		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
40753	Utility/Gen-set Bus L3L1 Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L3L1 voltage or Generator set Bus L3L1 voltage depending on paralleling application.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40754	Utility/Gen-set Bus L1N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L1N voltage or Generator set Bus L1N voltage depending on paralleling application.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40755	Utility/Gen-set Bus L2N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L2N voltage or Generator set Bus L2N voltage depending on paralleling application.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40756	Utility/Gen-set Bus L3N Voltage (Modlon)	Read Only	Multiplier: 1	Unit: Vac	This Modbus register is created for modlon register mapping. Utility L3N voltage or Generator set Bus L3N voltage depending on paralleling application.		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
40757	Customer Faults (Modlon)	Read Only	Multiplier: 1	Unit:	This Modbus register is created for modlon register mapping. 16 bit fault bitmap for Modbus interface.		PC 3.x
			Offset: 0	Lower Limit: 0			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 65530			
			Sign: S				
40760	ES State (Modlon)	Read Only	0: Standby		This Modbus register is created for modlon register mapping. Internal paralleling status variable		PC 3.x
			1: Dead Bus				
			2: Synchronize				
			3: Load Share				
			4: Load Govern				
40761	Load Demand Stop Command (Modlon)	Read Only	0: Inactive		This Modbus register is created for modlon register mapping. Modbus input for load demand stop command.		PC 3.x
			1: Active				
40764	Genset CB Position Status (Modlon)	Read Only	0: Open		This Modbus register is created for modlon register mapping. indicates generator set breaker position		PC 3.x
			1: Closed				
			2: Not Available				
40765	Utility CB Position Status (Modlon)	Read Only	0: Open 1: Closed 2: Not Available		This Modbus register is created for modlon register mapping. indicates utility breaker position		PC 3.x
40766	Remote Start Switch (Modlon)	Read/Write	0: Inactive 1: Active			This Modbus register is created for modlon register mapping. Modbus Remote Start	
40767	Fault Reset (Modlon)	Read/Write	0: Inactive 1: Active		This Modbus register is created for modlon register mapping. Modbus fault reset.		
40768	System Network Datalink Status	Read Only	0: Inactive 1: Active 2: Failed			Indicates communication status of the local genset on System Network (used for load demand). Available on PCC3300MLD controls only.	MLD Paralleling Status

Addr.	Parameter	Access	Specifications	Description	Function	Control
40769	Load Demand Genset Run Hours (Upper Register value)	Read/Write	Multiplier: 1 Offset: 0 Size: 32 Sign: U Units: Hours Lower Limit: 0 Upper Limit: 999999.9 Default: 0	Run hour accumulator used for load demand run hour equalization. This is writable. Available on PCC3300MLD controls only.	MLD paralleling set-up and status	PC 3.x
40770	Load Demand Genset Run Hours (Lower Register value)	Read/Write	Multiplier: 1 Offset: 0 Size: 32 Sign: U Units: Hours Lower Limit: 0 Upper Limit: 999999.9 Default: 0	Run hour accumulator used for load demand run hour equalization. This is writable. Available on PCC3300MLD controls only.	MLD paralleling set-up and status	PC 3.x
40771	Load Demand Spare Capacity Request Status	Read Only	0: Inactive 1: Active	Indicates the status of the spare capacity request input. When ACTIVE additional spare capacity (set by Load Demand Spare Capacity Request Value) is requested. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
40772	System Network Termination Resistor Switch Status	Read Only	0: On 1: Off	Indicates the status of the on-board CAN termination resistor switch (S1). Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
40773	Genset ID	Read/Write	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Genset identifier. All load demand gensets must have a unique Genset ID. Available on PCC3300MLD controls only. Setup Mode must be enabled to modify the value. See Modbus Address 43343.	MLD Paralleling Setup and Status	PC 3.x
40774	Load Demand Spare Capacity Request Value (Upper Register value)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Sets the kW value of additional capacity to be requested from the system when the Load Demand Spare Capacity Request Status is YES. Available on PCC3300MLD controls only. Setup Mode must be enabled to modify the value. See Modbus Address 43343.	MLD Paralleling Setup	PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
40775	Load Demand Spare Capacity Request Value (Lower Register value)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0		Sets the kW value of additional capacity to be requested from the system when the Load Demand Spare Capacity Request Status is YES. Available on PCC3300MLD controls only. Setup Mode must be enabled to modify the value. See Modbus Address 43343.	MLD Parallel Setup	PC 3.x
40776	Load Demand Gen-set Enable	Read/Write	0: Disable 1: Enable		Disables or Enables load demand on this genset only. When set to disable the genset is not included in the load demand system and can be removed without triggering a com error. Available on PCC3300MLD controls only. Setup Mode must be enabled to modify the value. See Modbus Address 43343.	MLD Parallel Setup	PC 3.x
40777	System Settings Status	Read Only	0: Out of Sync 1: In Sync		Indicates whether the system settings on the local genset are in sync with ones from other genset in the network. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x

41000	Load Demand System Enable	Read/Write	0: Disable 1: Enable		Disables or Enables load demand operation of all connected gensets. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41001	Load Demand Type	Read/Write	0: Run Hours Equalization (Run Hr Eql) 1: Fixed Sequence (Fixed Seq)		Sets the sequencing priority for load demand. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41002	Load Demand Threshold Method	Read/Write	0: kW 1: %kW		Sets whether the load demand start/stop control is based on a relative (%) or absolute (kW) threshold. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41003	Load Demand Start Threshold (%kW)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 8 Sign: U Units: % Lower Limit: 25 Upper Limit: 100 Default: 80		When the ratio of load to capacity is greater than this value the next genset will start. Must be greater than Load Demand Stop Threshold by at least 5%. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
41004	Load Demand Start Threshold (kW)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kW Lower Limit: 5 Upper Limit: 5000 Default: 500	When surplus capacity is less than this value the next genset will start. Must be less than Load Demand Stop Threshold (kW). Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x
41005	Load Demand Stop Threshold (%kW)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 8 Sign: U Units: % Lower Limit: 20 Upper Limit: 95 Default: 60	When the ratio of load to capacity is less than this value the next genset will stop. Must be less than Load Demand Start Threshold by at least 5%. Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x
41006	Load Demand Stop Threshold (kW)	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: kW Lower Limit: 5 Upper Limit: 5000 Default: 1000	When surplus capacity is greater than this value the next genset will stop. Must be greater than Load Demand Start Threshold (kW). Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x
41007	Load Demand Run Hours Differential	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: Hours Lower Limit: 1 Upper Limit: 250 Default: 50	When the difference between Load Demand Genset Run Hours between any running genset and any stopped genset reaches this value the stopped genset will be started. Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x
41008	Load Demand Genset Fail Delay	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: seconds Lower Limit: 10 Upper Limit: 900 Default: 60	Sets the time delay that the system waits for a genset to come online before declaring it as failed. Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x
41009	Load Demand Initial Delay	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: seconds Lower Limit: 60 Upper Limit: 1500 Default: 300	Sets the time delay before gensets are allowed to stop after initial start or after resuming halted load demand. Available on PCC3300MLD controls only.	MLD Paraleling Setup	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
41010	Load Demand Start Delay	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: seconds Lower Limit: 0 Upper Limit: 1500 Default: 10	Sets the time delay before next genset is allowed to start. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41011	Load Demand Stop Delay	Read/Write	Multiplier: 1 Offset: 0 Size(Bits): 16 Sign: U Units: seconds Lower Limit: 60 Upper Limit: 1500 Default: 300	Sets the time delay before next genset is allowed to stop. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41012	Clear Lost Gensets Local	Read/Write	0: No 1: Yes	When set to YES all gensets in state "Lost" will change to state "Gen Does Not Exist" in order to clear Lost Genset Warning. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41013	Load Demand Fixed Priority 1	Read/Write	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Assigns a genset to fixed priority 1. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41014	Load Demand Fixed Priority 2	Read/Write	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Assigns a genset to fixed priority 2. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x
41015	Load Demand Fixed Priority 3	Read/Write	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Assigns a genset to fixed priority 3. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
41016	Load Demand Fixed Priority 4	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9	9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 4. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup PC 3.x
41017	Load Demand Fixed Priority 5	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9	9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 5. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup PC 3.x
41018	Load Demand Fixed Priority 6	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9	9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 6. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup PC 3.x
41019	Load Demand Fixed Priority 7	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9	9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 7. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup PC 3.x
41020	Load Demand Fixed Priority 8	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9	9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 8. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Parallel Setup PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
41021	Load Demand Fixed Priority 9	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 9. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41022	Load Demand Fixed Priority 10	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 10. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41023	Load Demand Fixed Priority 11	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 11. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41024	Load Demand Fixed Priority 12	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 12. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41027	Load Demand Fixed Priority 15	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 15. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41028	Load Demand Fixed Priority 16	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16	Assigns a genset to fixed priority 16. Used when Load Demand Type is set to Fixed Sequence. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
41029	System Network Remote Fault Reset	Read/Write	0: Inactive 1: Active	When set to YES all the system network faults in the system would be reset. Available on PCC3300MLD controls only.		PC 3.x
41030	Synchronize System Settings	Read/Write	0: No 1: Yes	When set to YES system settings from the genset will be broadcasted and synchronized to all other gensets in the network. Available on PCC3300MLD controls only.	MLD Paralleling Setup	PC 3.x
42000	Load Demand State	Read Only	0: Off 1: Halted 2: Initial Delay 3: Load Monitor	Indicates the status of Load Demand operation.. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
42001	Load Demand Gen-set Bus Total kW (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total load of System Network connected gensets. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42002	Load Demand Gen-set Bus Total kW (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total load of System Network connected gensets. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42003	Load Demand Surplus Capacity (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total load of System Network connected gensets. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42004	Load Demand Surplus Capacity (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total load of System Network connected gensets. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
42005	Load Demand Online Capacity (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total amount of online kW bus capacity for load demand. Only gensets which are eligible for load demand are counted. Available on PCC3300MLD controls only.	MLD Parallel Status	PC 3.x
42006	Load Demand Online Capacity (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total amount of online kW bus capacity for load demand. Only gensets which are eligible for load demand count. Available on PCC3300MLD controls only.	MLD Parallel Status	PC 3.x
42007	Load Demand Initial Delay Timer	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 16 Sign: U Units: Seconds Lower Limit: 0 Upper Limit: 1500 Default: 0	Indicates the time remaining before gensets are allowed to stop after initial start or after resuming halted load demand. This timer is set by Load Demand Initial Delay. Available on PCC3300MLD controls only.	MLD Parallel Status	PC 3.x
42008	Load Demand Start Delay Timer	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 16 Sign: U Units: Seconds Lower Limit: 0 Upper Limit: 1500 Default: 0	Indicates the time remaining before next genset is allowed to start. This timer is set by Load Demand Start Delay. Available on PCC3300MLD controls only.	MLD Parallel Status	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
42009	Load Demand Stop Delay Timer	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 16 Sign: U Units: Seconds Lower Limit: 0 Upper Limit: 1500 Default: 0	Indicates the time remaining before next genset is allowed to stop. This timer is set by Load Demand Stop Delay. Available on PCC3300MLD controls only.	MLD Paraleling Status	PC 3.x
42010	Load Demand Spare Capacity Available	Read Only	0: No 1: Yes	Indicates when the current load and spare capacity requirements are satisfied. Available on PCC3300MLD controls only.	MLD Paraleling Status	PC 3.x
42011	Load Demand Total Spare Capacity Requested (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total kW value of all currently active spare capacity requests in the system. Available on PCC3300MLD controls only.	MLD Paraleling Status	PC 3.x
42012	Load Demand Total Spare Capacity Requested (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	Indicates the total kW value of all currently active spare capacity requests in the system. Available on PCC3300MLD controls only.	MLD Paraleling Status	PC 3.x
42013	Load Demand Next Start Threshold (kW) (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	The kW load at which the next genset will be started. Available on PCC3300MLD controls only.	MLD Paraleling Status	PC 3.x

Addr.	Parameter	Access	Specifications	Description	Function	Control
42014	Load Demand Next Start Threshold (kW) (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	The kW load at which the next genset will be started. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42015	Load Demand Next Stop Threshold (Upper Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	The kW load at which the next genset will be stopped. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42016	Load Demand Next Stop Threshold (Lower Register value)	Read Only	Multiplier: 1.0 Offset: 0 Size (bits): 32 Sign: U Units: kW Lower Limit: 0 Upper Limit: 80000 Default: 0	The kW load at which the next genset will be stopped. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42017	Load Demand Next Gen to start (kW)	Read Only	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Indicates the next genset to start by ID. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x
42018	Load Demand Next Gen to Stop	Read Only	0: Gen1 9: Gen10 1: Gen2 10: Gen11 2: Gen3 11: Gen12 3: Gen4 12: Gen13 4: Gen5 13: Gen14 5: Gen6 14: Gen15 6: Gen7 15: Gen16 7: Gen8 8: Gen9	Indicates the next genset to stop by ID. Available on PCC3300MLD controls only.	MLD Paralleling Status	PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
42019	Load Demand Inhibit Local	Read Only	0: Inactive 1: Active		Indicates the status of the Load Demand Inhibit input. When ACTIVE all the gensets will start. Available on PCC3300MLD controls only.	MLD Parallel Status	PC 3.x
43000	Genset % Application L1 Current	Read Only	Multiplier: 0.1	Unit: %	Monitors the generator set application L1 current percentage output.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:

Addr.	Parameter	Access	Specifications	Description	Function	Control
43280	Coolant Level Switch	Read Only	0: Inactive	Coolant Level input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active			
43281	Coolant Level/Configurable Input #5 Switch	Read Only	0: Inactive	This is the status of the Configurable Input #5.		PC 2.x, PC 3.x
			1: Active			
43283	Fault Reset Switch	Read Only	0: Inactive	Fault Reset input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active			
43284	Fault Reset/Configurable Input #10 Switch	Read Only	0: Inactive	This is the status of the Configurable Input #10.		PC 2.x, PC 3.x
			1: Active			
43285	Genset CB Inhibit/Configurable Input #28 Switch	Read Only	0: Inactive	This is the status of the Configurable Input #28.		PC 3.x
			1: Active			
43286	Genset CB Pos B/Configurable Input #26 Switch	Read Only	0: Inactive	This is the status of the Configurable Input #26.		PC 3.x
			1: Active			
43287	Genset CB Tripped/Configurable Input #27 Switch	Read Only	0: Inactive	This is the status of the Configurable Input #27.		PC 3.x
			1: Active			
43292	Ground Fault Switch	Read Only	0: Inactive	Ground Fault Switch function output status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active			
43293	High Alt Temp Switch	Read Only	0: Inactive	High Alt Temperature Switch function output status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active			

Addr.	Parameter	Access	Specifications		Description	Function	Control
43295	Load Demand Stop/ Configurable Input #31 Switch	Read Only	0: Inactive		This is the status of the Configurable Input #31.		PC 3.x
			1: Active				
43296	Local E-stop Switch	Read Only	0: Inactive		Monitors the E-Stop switch.		PC 2.x, PC 3.x
			1: Active				
43297	Low Coolant #2 Switch	Read Only	0: Inactive		Low Coolant #2 Switch function output status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
43298	Low Engine Temperature Switch	Read Only	0: Inactive		Low Engine Temperature Switch function output status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
43299	Low Fuel In Day Tank Switch	Read Only	0: Inactive		Low Fuel In Day Tank Switch function output status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
43300	Genset Bus Delta/Wye Connection	Read/ Write	0: Delta		Delta or Wye for Utility connection		PC 3.x
			1: Wye				
43301	Genset Bus Nominal Voltage	Read Only	Multiplier: 1	Unit: Vac	Generator set Bus nominal voltage		PC 3.x
			Offset: 0	Lower Limit: 110			
			Size (bits): 16	Upper Limit: 45000			
			Sign: U				
43302	Genset Delta/Wye Connection	Read Only	0: Delta		Delta or Wye for Generator set connection		PC 2.x, PC 3.x
			1: Wye				
43303	Genset Nominal Voltage	Read Only	Multiplier: 1	Unit: Vac	Generator set nominal line- line voltage		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 110			
			Size (bits): 16	Upper Limit: 45000			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Sign: U				
43304	Single/3 Phase Connection	Read Only	0: Single Phase		Setup mode interlocked. Generator set's single phase/3 phase metering setup configuration.		PC 2.x, PC 3.x
			1: Three Phase				
43306	Utility Delta/Wye Connection	Read/Write	0: Delta		Delta or Wye for Utility connection		PC 3.x
			1: Wye				
43307	Utility Nominal Voltage	Read Only	Multiplier: 1	Unit: Vac	Utility nominal voltage		PC 3.x
			Offset: 0	Lower Limit: 110			
			Size (bits): 16	Upper Limit: 45000			
			Sign: U				
43309	Overfrequency Enable	Read/Write	0: Disabled		Enables over frequency diagnostic witness test.		PC 2.x, PC 3.x
			1: Enabled				
43310	Overload Warning Set Time	Read/Write	Multiplier: 1	Unit: seconds	The time delay until an overload condition is reported as a fault		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 120			
			Sign: U				
43311	Overload Warning Threshold	Read/Write	Multiplier: 0.01	Unit: %	Sets the Overload Warning fault trip threshold as percentage of generator set application kW rating.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 80			
			Size (bits): 16	Upper Limit: 140			
			Sign: U				
43338	CAN Failure Retries	Read/Write	Multiplier: 1	Unit:	Sets the maximum number of CAN communication retries		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 10			
			Sign: U				
43339	Auto Sleep Enable	Read/Write	0: Awake in Auto		Trim that determines if the control will stay awake in Auto mode or Fall asleep in Auto mode.		PC 2.x, PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			1: Sleep in Auto				
43340	Max Setup Mode Time	Read/Write	Multiplier: 1	Unit: Seconds	Max time allowed in Setup Mode.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 30			
			Size (bits): 16	Upper Limit: 3600			
			Sign: U				
43341	Power Down Mode Enable	Read/Write	0: Disable		Trim to enable Sleep Mode		PC 2.x, PC 3.x
			1: Enable				
43342	Power Down Mode Time Delay	Read/Write	Multiplier: 1	Unit: seconds	Timer setting for the Power Down delay feature		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 600			
			Sign: U				
43343	Setup Mode Enable	Read/Write	0: Disable		Volatile to allow entry into Setup Mode		PC 2.x, PC 3.x
			1: Enable				
43344	Clock Date	Read/Write	Multiplier: 1	Unit:	Use to set or read the current date.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 31			
			Sign: U				
43345	Clock Hour	Read/Write	Multiplier: 1	Unit:	Use to set or read the current hour.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 23			
			Sign: U				
43346	Clock Minute	Read/Write	Multiplier: 1	Unit:	Use to set or read the current minute.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 59			
			Sign: U				
43347	Clock Mode	Read/Write	0: Normal		Use to set the real time clock and save settings.		PC 2.x, PC 3.x
			1: Set Clock				
			2: Save Clock				
43348	Clock Month	Read/Write	Multiplier: 1	Unit:	Use to set or read the current month.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 8	Upper Limit: 12			
			Sign: U				
43349	Clock Second	Read/Write	Multiplier: 1	Unit:	Use to set or read the current second.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 59			
			Sign: U				
43350	Clock Year	Read/Write	Multiplier: 1	Unit:	Use to set or read the current year.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 99			
			Sign: U				
43351	Daylight Savings End Hour	Read/Write	Multiplier: 1	Unit:	Use to set the hour of the day when daylight savings time ends.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 8	Upper Limit: 19			
			Sign: U				
43352	Daylight Savings End Month	Read/Write	Multiplier: 1	Unit:	Use to set the month when daylight savings time ends.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 12			
			Sign: U				
43353	Daylight Savings End Week Occurrence in Month	Read/Write	0: First Occurrence		Use to set the week of the month when daylight savings time ends.		PC 2.x, PC 3.x
			1: Second Occurrence				
			2: Third Occurrence				
			3: Fourth Occurrence				
			4: Last Occurrence				
43354	Daylight Savings Start Day	Read/Write	0: Sunday		Use to set the day of the week when daylight savings time starts.		PC 2.x, PC 3.x
			1: Monday				
			2: Tuesday				
			3: Wednesday				
			4: Thursday				
			5: Friday				
			6: Saturday				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43355	Daylight Savings Start Hour	Read/Write	Multiplier: 1	Unit:	Use to set the hour of the day when daylight savings time starts.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 8	Upper Limit: 19			
			Sign: U				
43356	Daylight Savings Start Month	Read/Write	Multiplier: 1	Unit:	Use to set the month when daylight savings time starts.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 12			
			Sign: U				
43357	Daylight Savings Start Week Occurrence in Month	Read/Write	0: First Occurrence		Use to set the week of the month when daylight savings time starts.		PC 2.x, PC 3.x
			1: Second Occurrence				
			2: Third Occurrence				
			3: Fourth Occurrence				
			4: Last Occurrence				
43358	Daylight Savings Time Adjustment	Read/Write	Multiplier: 1	Unit: Minutes	Use to set the amount of daylight savings time adjustment applied.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 120			
			Sign: U				
43359	Daylight Savings Time Enable	Read/Write	0: Disabled		Use to enable the daylight savings time feature.		PC 2.x, PC 3.x
			1: Enabled				
43360	Exercise Scheduler Enable	Read/Write	0: Disabled		Enables the exercise scheduler.		PC 2.x, PC 3.x
			1: Enabled				
43361	Reset Fuel Consumption	Read/Write	0: Inactive		The reset trip fuel consumption command.		PC 2.x, PC 3.x
			1: Active				
43362	Reset Runs	Read/Write	0: Inactive		The reset runs command.		PC 2.x, PC 3.x
			1: Active				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43363	Reset Start Attempts	Read/Write	0: Inactive		The reset start attempts command.		PC 2.x, PC 3.x
			1: Active				
43364	Scheduler Exception Select	Read/Write	Multiplier: 1	Unit:	Used to select an exception to adjust.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 6			
			Sign: U				
43374	Scheduler Program Select	Read/Write	Multiplier: 1	Unit:	Used to select a program to adjust.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 8	Upper Limit: 12			
			Sign: U				
43377	Scheduler Program x Enable	Read/Write	0: Disable		Used to enable or disable the selected program.		PC 2.x, PC 3.x
			1: Enable				
43379	Scheduler Program x Run Mode	Read/Write	0: No Load		Used to adjust the run mode for the selected program.		PC 3.x
			1: With Load				
			2: Extended Parallel				
43383	Daylight Savings End Day	Read/Write	0: Sunday		Use to set the day of the week when daylight savings time ends.		PC 2.x, PC 3.x
			1: Monday				
			2: Tuesday				
			3: Wednesday				
			4: Thursday				
			5: Friday				
			6: Saturday				
43502	Idle Rated Command	Read Only	0: Idle		The output command of the Idle/Rated Logic		PC 2.x, PC 3.x
			1: Rated				
43507	Load Dump Overload Condition	Read Only	0: Inactive		Monitors the state of the load dump overload detection algorithm		PC 2.x, PC 3.x
			1: Active				
			2: Reserved				
			3: Not Available				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43508	Load Dump Underfrequency Condition	Read Only	0: Inactive		The state of the load dump underfrequency detection algorithm		PC 2.x, PC 3.x
			1: Active				
			2: Reserved				
			3: Not Available				
43509	Low Battery Voltage Running Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	The low battery voltage threshold when the generator set is in rated mode		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43510	Low Battery Voltage Stopped Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	The low battery voltage threshold when the generator set is not in rated mode		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43511	Low Battery Voltage Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	The selection of the running or stopped threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43516	Prelube Mode	Read Only	0: Crank After Prelube		Set to a required mode based on the type of starting requirement		PC 2.x, PC 3.x
			1: Crank With Prelube				
			2: Prelube Only				
43517	Prelube State	Read Only	0: Complete		The monitor point for the prelube state.		PC 2.x, PC 3.x
			1: Armed				
			2: Prelube Output ON				
			3: Prelube Output OFF				
			4: Enable Crank				
43524	Remote Start Command	Read Only	0: Stop		The output of the Remote Start Command OR logic		PC 2.x, PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			1: Start				
43530	Speed and Voltage Bias Relay Command	Read Only	0: Inactive		Monitor point for the command which closes the on-board relay enabling the voltage and speed bias outputs.		PC 3.x
			1: Active				
43533	Start Countdown	Read Only	Multiplier: 1	Unit: seconds	Time remaining until start is initiated		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 300			
			Sign: U				
43538	Starter Command	Read Only	0: Inactive		State of hardware output.		PC 2.x, PC 3.x
			1: Active				
			2: Reserved				
			3: Not Available				
43539	Stop Countdown	Read Only	Multiplier: 1	Unit: seconds	Time remaining until generator set stops		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 5000			
			Sign: U				
43543	Time At No Load	Read Only	Multiplier: 1	Unit: seconds	Amount of time the generator set has run at no load		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 600			
			Sign: U				
43544	Time at Rated Cool-down	Read Only	Multiplier: 1	Unit: seconds	Amount of time spend in Rated Cooldown		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 5000			
			Sign: U				
43547	Voltage Set-point	Read Only	Multiplier: 0.01	Unit: %	The voltage setpoint command		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 150			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43550	Weak Battery Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Monitor point for the weak battery voltage threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 6			
			Size (bits): 16	Upper Limit: 16			
			Sign: U				
43551	Weak Battery Voltage Set Time	Read/Write	Multiplier: 1	Unit: seconds	The time delay until a weak battery condition is reported as a fault		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 16	Upper Limit: 5			
			Sign: U				
43553	Synchronizer Status	Read Only	0: Synchronizer Off		Indicates whether synchronizer is on or off		PC 3.x
			1: Synchronizer On				
43554	Active Transition Timer	Read Only	Multiplier: 0.1	Unit: seconds	Countdown value of the active transition timer		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43555	Active Transition Type	Read Only	0: None		Indicates the active transition type for PTC		PC 3.x
			1: Programmed Transition				
			2: Transfer				
			3: Retransfer				
			4: Max Parallel				
43558	ES State	Read Only	0: Standby		Internal paralleling status variable		PC 3.x
			1: Dead Bus				
			2: Synchronize				
			3: Load Share				
			4: Load Govern				
43560	Genset CB Close Command	Read Only	0: Inactive		Generator set cb close command status		PC 3.x
			1: Active				
43562	Genset CB Position Status	Read Only	0: Open		Indicates generator set breaker position		PC 3.x
			1: Closed				

Addr.	Parameter	Access	Specifications		Description	Function	Control
			2: Not Available				
43563	Genset Availability Status	Read Only	0: Not Available		Indicates status of the generator set source		PC 3.x
			1: Available				
			2: Unknown				
43564	Bus Status	Read Only	0: Unavailable		Indicates status of the bus		PC 3.x
			1: Dead				
			2: Live				
43565	Genset CB Inhibit Command	Read Only	0: Inactive		Generator set cb inhibit command		PC 3.x
			1: Active				
43566	Genset CB Tripped Command	Read Only	0: Inactive		Generator set cb tripped command		PC 3.x
			1: Active				
43568	Genset Frequency Lower Drop-Out Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the lower drop-out threshold in Hz for generator set frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43569	Genset Frequency Lower Pick-Up Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the lower pick-up threshold in Hz for generator set frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43570	Genset Frequency Sensor Status	Read Only	0: Unknown		Indicates generator set frequency sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43571	Genset Frequency Upper Drop-Out Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the upper drop-out threshold in Hz for generator set frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit:			
			Sign: U				
43572	Genset Frequency Upper Pick-Up Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the upper pick-up threshold in Hz for generator set frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43573	Genset Loss of Phase Sensor Status	Read Only	0: Unknown		Indicates generator set loss of phase sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43574	Genset Overvoltage Drop-Out Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the drop-out threshold in volts for generator set over voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43575	Genset Overvoltage Pick-Up Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the pick-up threshold in volts for generator set over voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43576	Genset Overvoltage Sensor Status	Read Only	0: Unknown		Indicates generator set over voltage sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43577	Genset Phase Rotation Sensor Status	Read Only	0: Unknown		Indicates generator set phase rotation sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43578	Genset Undervoltage Drop-Out Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the drop-out threshold in volts for generator set under voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43579	Genset Undervoltage Pick-Up Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the pick-up threshold in volts for generator set under voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43580	Genset Undervoltage Sensor Status	Read Only	0: Unknown		Indicates generator set under voltage sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43584	Paralleling Speed Control Mode	Read Only	0: Isochronous		Indicates which speed control algorithm is in effect		PC 2.x, PC 3.x
			1: Droop				
			2: Synchronize				
			3: Load Share				
			4: Load Govern				
43585	Paralleling Voltage Control Mode	Read Only	0: Isochronous		Indicates which voltage control algorithm is in effect		PC 2.x, PC 3.x
			1: Droop				
			2: Synchronize				
			3: Load Share				
			4: Load Govern				
43589	PTC Operating Transition Type	Read Only	0: Open Transition		Indicates the transition type currently in effect		PC 3.x
			1: Hard Closed Transition				
			2: Soft Closed Transition				
43590	PTC State	Read Only	0: PTC Not Enabled		Indicates the connected state of the Power Transfer Control		PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			1: No Source Connected				
			2: Utility Connected				
			3: Genset Connected				
			4: Paralleled				
43597	Utility CB Close Command	Read Only	0: Inactive		Utility cb close command status		PC 3.x
			1: Active				
43598	Utility CB Open Command	Read Only	0: Inactive		Utility cb open command status		PC 3.x
			1: Active				
43599	Utility CB Position Status	Read Only	0: Open		Indicates utility breaker position		PC 3.x
			1: Closed				
			2: Not Available				
43600	Load Govern kW Method	Read/Write	0: Genset kW		Use to select how generator set kW output will be controlled when paralleled to utility.		PC 3.x
			1: Genset kW w/Utility Constraint				
			2: Utility kW				
43608	Configurable Output #1 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43610	Configurable Output #2 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43613	Configurable Output #20 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43616	Configurable Output #21 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43619	Configurable Output #22 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43622	Configurable Output #3 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43625	Configurable Output #4 Event Code	Read/Write	Multiplier: 1	Unit:	The event code for this output.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 65530			
			Sign: U				
43641	Delayed Shutdown Enable	Read/Write	0: Disabled		Enables the Delayed Shutdown feature.		PC 2.x, PC 3.x
			1: Enabled				
43642	Delayed Shutdown Time Delay	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the shutdown fault delayed time delay for the Delayed Shutdown feature.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 3			
			Sign: U				
43643	Remote Fault Reset Enabled	Read/Write	0: Disable		Trim to enable Remote Fault Reset. Can only reset Warning Faults		PC 2.x, PC 3.x
			1: Enable				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43644	Fail To Shutdown Delay	Read/Write	Multiplier: 1	Unit: seconds	Trim to set the time for a shutdown fault to be active and the generator set not shutting down before the Fail to Shutdown fault occurs.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 30			
			Sign: U				
43645	LCL Detection Response	Read/Write	0: None		Sets low coolant level fault response to None, Warning, or Shutdown.		PC 2.x, PC 3.x
			1: Warning				
			2: Shutdown				
43646	LCT Warning Clear Time	Read/Write	Multiplier: 1	Unit: Minutes	Sets time to clear the low coolant temperature fault.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 30			
			Sign: U				
43647	LCT Warning Set Time	Read/Write	Multiplier: 1	Unit: Minutes	Sets time to set the low coolant temperature fault.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 30			
			Sign: U				
43648	LCT Warning Threshold	Read/Write	Multiplier: 1	Unit: degF	Sets threshold for the low coolant temperature fault warning.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -20			
			Size (bits): 16	Upper Limit: 100			
			Sign: S				
43649	V/Hz Knee Frequency	Read/Write	Multiplier: 0.1	Unit: Hz	The voltage will roll off (decrease) proportionally to the V/Hz setup, once the frequency drops below the set point in the V/Hz Knee Frequency. This allows the generator set to recover faster when the frequency drops.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43650	V/Hz Rolloff Slope	Read/Write	Multiplier: 0.1	Unit: % / Hz	The amount of voltage roll off when the frequency is below the knee frequency		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			
			Sign: U				
43651	12 V High Battery Voltage Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 12V high battery voltage fault threshold.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 14			
			Size (bits): 16	Upper Limit: 17			
			Sign: U				
43652	12 V Low Battery Voltage Running Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 12V low battery voltage fault threshold for generator set operation while in rated mode		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 12			
			Size (bits): 16	Upper Limit: 16			
			Sign: U				
43653	12 V Low Battery Voltage Stopped Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 12V low battery voltage fault threshold for generator set operation in all modes except rated		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 11			
			Size (bits): 16	Upper Limit: 13			
			Sign: U				
43654	12 V Weak Battery Voltage Threshold	Read/Write	Multiplier: 0.1	Unit: Vdc	Sets 12V weak battery voltage fault threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 6			
			Size (bits): 16	Upper Limit: 10			
			Sign: U				
43655	24 V High Battery Voltage Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 24V high battery voltage fault threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 28			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 34			
			Sign: U				
43656	24 V Low Battery Voltage Running Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 24V low battery voltage fault threshold for generator set operation while in rated mode		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 24			
			Size (bits): 16	Upper Limit: 28			
			Sign: U				
43657	24 V Low Battery Voltage Stopped Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	Sets 24V low battery voltage fault threshold for generator set operation in all modes except rated		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 22			
			Size (bits): 16	Upper Limit: 26			
			Sign: U				
43658	24 V Weak Battery Voltage Threshold	Read/Write	Multiplier: 0.1	Unit: Vdc	Sets 24V weak battery voltage fault threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 12			
			Size (bits): 16	Upper Limit: 16			
			Sign: U				
43659	Adjustable Freq/Speed Gain	Read/Write	Multiplier: 0.01	Unit: RPM/Hz	Sets the RPM/Hz conversion factor when the Freq to Speed Gain Select trim is set to this trim		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 240			
			Sign: U				
43660	Alternate Frequency Switch	Read Only	0: 50 Hz		Sets the generator set nominal frequency.		PC 2.x, PC 3.x
			1: 60 Hz				
43661	AVR Gain Adjust Trim	Read/Write	Multiplier: 0.01	Unit:	A trim that allows the user to modify the overall gains of the AVR.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0.05			
			Size (bits): 16	Upper Limit: 10			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Sign: U				
43662	Charging Alternator Fault Time Delay	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the time delay for the charging alt failure fault		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 16	Upper Limit: 300			
			Sign: U				
43663	Continuous Crank Engage Time	Read/Write	Multiplier: 1	Unit: seconds	Sets the maximum amount of time to engage the starter when using the continuous cranking method		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 40			
			Size (bits): 16	Upper Limit: 100			
			Sign: U				
43664	Controlled Shutdown Advance Notice Delay	Read/Write	Multiplier: 1	Unit: seconds	Delay allowed for a shut-down with cooldown fault prior to shutting down the generator set		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 300			
			Sign: U				
43665	Crank Attempts	Read/Write	Multiplier: 1	Unit:	Sets the maximum number of times to engage the starter when attempting to start engine using the cycle cranking method		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 16	Upper Limit: 7			
			Sign: U				
43666	Cycle / Cont Crank Select	Read Only	0: Cycle		Selects whether to use continuous cranking or cycle cranking when attempting to start engine		PC 2.x, PC 3.x
			1: Continuous				
43667	Cycle Crank Engage Time	Read/Write	Multiplier: 1	Unit: seconds	Sets the maximum amount of time to engage the starter during a single crank attempt when using the cycle cranking method		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 20			
			Sign: U				
43668	Cycle Crank Rest Time	Read/Write	Multiplier: 1	Unit: seconds	Sets the amount of time to wait between crank attempts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 7			
			Size (bits): 16	Upper Limit: 40			
			Sign: U				
43669	Delayed Off FSO Relay Time	Read/Write	Multiplier: 0.1	Unit: seconds	Time delay between when the Delayed Off Command turns off and Run Command turns off		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 120			
			Sign: U				
43671	External Bias Commands Enable	Read/Write	0: Disabled		Enables the external bias (speed and voltage commands) to the hardware outputs.		PC 3.x
			1: Enabled				
43672	Frequency Adjust	Read/Write	Multiplier: 0.01	Unit: Hz	A method of adding in a frequency offset to the base frequency subject to high and low limit calibrations		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -6			
			Size (bits): 16	Upper Limit: 6			
			Sign: S				
43673	Genset Exercise Time	Read/Write	Multiplier: 0.1	Unit: hours	Sets the total exercise time not including warmup at idle or idle cooldown time		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 25			
			Sign: U				
43674	Governor Gain Adjust	Read Only	Multiplier: 0.01	Unit:	A trim that allows the user to modify the overall gain of the governor		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0.05			
			Size (bits): 16	Upper Limit: 15			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43675	High Battery Voltage Set Time	Read Only	Multiplier: 1	Unit: seconds	The time delay until a high battery voltage condition is reported as a fault.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 16	Upper Limit: 60			
			Sign: U				
43676	High Battery Voltage Threshold	Read Only	Multiplier: 0.1	Unit: Vdc	The high battery voltage threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43677	Idle Cool-down Time	Read/Write	Multiplier: 0.25	Unit: minutes	Sets time to run at idle before shutting down generator set on normal stops		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 60			
			Sign: U				
43678	Idle Speed	Read Only	Multiplier: 1	Unit: RPM	Sets the speed at which the engine will idle subject to high and low limit calibrations		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 700			
			Size (bits): 16	Upper Limit: 1100			
			Sign: U				
43679	Idle to Rated Ramp Time	Read/Write	Multiplier: 0.1	Unit: seconds	The time over which the speed reference is to ramp from idle speed to rated speed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 30			
			Sign: U				
43680	Idle Warmup Coolant Temp	Read/Write	Multiplier: 1	Unit: degF	Coolant temperature threshold to end idle warmup time		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -40			
			Size (bits): 16	Upper Limit: 300			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43681	Idle Warmup Time	Read/Write	Multiplier: 1	Unit: seconds	Sets maximum idle warmup time. Warmup time may be less if coolant temperature exceeds threshold		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 3600			
			Sign: U				
43682	Load Dump Activation Method	Read/Write	0: Overload		Enables the load dump output as a function of the overload and underfrequency conditions		PC 2.x, PC 3.x
			1: Underfrequency				
			2: Overload or Underfrequency				
			3: Disabled				
43683	Load Dump Overload Set Time	Read/Write	Multiplier: 1	Unit: seconds	The time delay until the load dump overload condition is set active		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 120			
			Sign: U				
43684	Load Dump Overload Threshold	Read/Write	Multiplier: 1	Unit: %	The load dump overload threshold as a percentage of the generator set application rating		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 80			
			Size (bits): 16	Upper Limit: 140			
			Sign: U				
43685	Load Dump Underfrequency Offset	Read/Write	Multiplier: 1	Unit: Hz	The frequency amount which the load dump underfrequency threshold is below the final frequency reference		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			
			Sign: S				
43686	Load Dump Underfrequency Set Time	Read/Write	Multiplier: 1	Unit: seconds	The time delay until the load dump underfrequency condition is set active		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 20			
			Sign: U				
43687	Load Dump Underfrequency Threshold	Read Only	Multiplier: 0.1	Unit: Hz	The frequency trip threshold for the load dump underfrequency condition		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 90			
			Sign: U				
43688	Low Battery Voltage Set Time	Read Only	Multiplier: 1	Unit: seconds	The time delay until a low battery voltage condition is reported as a fault		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 16	Upper Limit: 60			
			Sign: U				
43689	Low Fuel in Day Tank Time	Read/Write	Multiplier: 1	Unit: seconds	Low Fuel in Day Tank Fault time delay from switch input.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 20			
			Sign: U				
43690	Low Fuel Set/Clear Time	Read/Write	Multiplier: 1	Unit: seconds	A trim that sets the delay time for generating the inactive and active faults.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 2			
			Size (bits): 16	Upper Limit: 60			
			Sign: U				
43691	Manual Warmup Bypass	Read/Write	0: Normal		Use to command idle speed or to bypass idle warmup during a manual run		PC 2.x, PC 3.x
			1: Bypass Warmup				
43692	Max Idle Time	Read/Write	Multiplier: 0.1	Unit: minutes	Sets the fault time for the Too Long in Idle fault.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 20			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43693	Nominal Battery Voltage	Read Only	0: 12V		Selects the generator set's nominal battery operating voltage		PC 2.x, PC 3.x
			1: 24V				
43694	Prelube Cycle Enable	Read/Write	0: Disabled		Enables Or Disables the cyclic mode of prelube operation		PC 2.x, PC 3.x
			1: Enabled				
43695	Prelube Cycle Time	Read/Write	Multiplier: 0.1	Unit: hours	Sets the period of the Prelube Cycle Iteration		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 1			
			Size (bits): 16	Upper Limit: 1000			
			Sign: U				
43696	Prelube Function Enable	Read/Write	0: Disabled		Selects whether the Prelube function is enabled or disabled. This is Setup mode interlocked		PC 2.x, PC 3.x
			1: Enabled				
43697	Prelube Oil Pressure Threshold	Read/Write	Multiplier: 0.1	Unit: psig	The oil pressure value which when reached the prelube driver will turn off		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			
			Sign: U				
43698	Prelube Timeout Period	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the maximum time for which the Prelube Driver will Remain ON		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 30			
			Sign: U				
43699	Rated to Idle Ramp Time	Read/Write	Multiplier: 0.1	Unit: seconds	The time over which the speed reference is to ramp from rated speed to idle speed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 30			
			Sign: U				
43700	Utility Availability Status	Read Only	0: Not Available		Indicates status of the utility source		PC 3.x
			1: Available				

Addr.	Parameter	Access	Specifications		Description	Function	Control
			2: Unknown				
43701	Utility CB Inhibit Command	Read Only	0: Inactive		Utility cb inhibit command		PC 3.x
			1: Active				
43702	Utility CB Tripped Command	Read Only	0: Inactive		Utility cb tripped command		PC 3.x
			1: Active				
43703	Utility Current Based Breaker Position	Read Only	0: Unknown		Indicates utility breaker position based on current		PC 3.x
			1: Closed				
43704	Utility Frequency Lower Drop-Out Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the lower drop-out threshold in Hz for utility frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43705	Utility Frequency Lower Pick-Up Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the lower pick-up threshold in Hz for utility frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43706	Utility Frequency Sensor Status	Read Only	0: Unknown		Indicates utility frequency sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43707	Utility Frequency Upper Drop-Out Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the upper drop-out threshold in Hz for utility frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43708	Utility Frequency Upper Pick-Up Threshold	Read Only	Multiplier: 0.1	Unit: Hz	Indicates the upper pick-up threshold in Hz for utility frequency sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43709	Utility Loss of Phase Sensor Status	Read Only	0: Unknown		Indicates utility loss of phase sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43710	Utility Over-voltage Drop-Out Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the drop-out threshold in volts for utility over voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43711	Utility Over-voltage Pick-Up Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the pick-up threshold in volts for utility over voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43712	Utility Over-voltage Sensor Status	Read Only	0: Unknown		Indicates utility over voltage sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43713	Utility Phase Rotation Sensor Status	Read Only	0: Unknown		Indicates utility phase rotation sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43714	Utility Under-voltage Drop-Out Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the drop-out threshold in volts for utility under voltage sensor		PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43715	Utility Under-voltage Pick-Up Threshold	Read Only	Multiplier: 1	Unit: Vac	Indicates the pick-up threshold in volts for utility under voltage sensor		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43716	Utility Under-voltage Sensor Status	Read Only	0: Unknown		Indicates utility under voltage sensor status		PC 3.x
			1: Picked Up				
			2: Dropped Out				
43719	Alternator Temperature 1 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Alternator Temperature 1 input from the Aux 101 I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43720	Alternator Temperature 2 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Alternator Temperature 2 input from the Aux 101 I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43721	Alternator Temperature 3 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Alternator Temperature 3 input from the Aux 101 I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43722	Ambient Temperature (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Ambient Temperature input from the Aux 101 I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43723	Aux101 0 Analog Input 1 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 0 analog input 1 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -500			
			Size (bits): 16	Upper Limit: 500			
			Sign: S				
43724	Aux101 0 Analog Input 2 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 0 analog input 2 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -500			
			Size (bits): 16	Upper Limit: 500			
			Sign: S				
43725	Aux101 0 Analog Input 3 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 0 analog input 3 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43726	Aux101 0 Analog Input 4 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 0 analog input 4 in volts		PC 2.x, PC 3.x

43736	Aux101 1 Analog Input 6 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 1 analog input 6 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43737	Aux101 1 Analog Input 7 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 1 analog input 7 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43738	Aux101 1 Analog Input 8 Voltage	Read Only	Multiplier: 0.01	Unit: Vdc	Monitor point for the module 1 analog input 8 in volts		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43739	Battery Charger AC Failure (HMI113)	Read Only	0: Inactive		Monitor point for the battery charger failure input from the PCCNET annunciator.		PC 2.x, PC 3.x
			1: Active				
43740	Drive End Bearing Temperature (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Drive End Bearing Temperature input from the I/O module.		PC 2.x, PC 3.x

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43741	Exhaust Stack Temperature 1 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Exhaust Stack Temperature1 input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32767			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43742	Exhaust Stack Temperature 2 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Exhaust Stack Temperature2 input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32768			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43745	Fuel Level % (PCCnet)	Read Only	Multiplier: 0.1	Unit: %	Monitor point for the % fuel level input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43746	Fuel Level (PCCnet)	Read Only	Multiplier: 1	Unit:	Monitor point for the fuel level (in gallons) input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43747	HMI113 Fault 1 Status	Read Only	0: Inactive		Monitor point for input #1 from the annunciator.		PC 2.x, PC 3.x
			1: Active				
43748	HMI113 Fault 2 Status	Read Only	0: Inactive		Monitor point for input #2 from the annunciator.		PC 2.x, PC 3.x
			1: Active				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43749	HMI113 Fault 3 Status	Read Only	0: Inactive		Monitor point for the input #3 from the annunciator.		PC 2.x, PC 3.x
			1: Active				
43750	Intake Manifold Temperature 1 (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Intake Manifold Temperature 1 input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -32768			
			Size (bits): 16	Upper Limit: 32762			
			Sign: S				
43751	Low Coolant Level (HMI113)	Read Only	0: Inactive		Monitor point for the Low Coolant Level input from the PCCnet annunciator.		PC 2.x, PC 3.x
			1: Active				
43752	Low Fuel Level (HMI113)	Read Only	0: Inactive		Monitor point for the Low Fuel Level input from the PCCnet annunciator.		PC 2.x, PC 3.x
			1: Active				
43755	Non-Drive End Bearing Temperature (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Non-Drive End Bearing Temperature input from the I/O module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -65534			
			Size (bits): 16	Upper Limit: 65535			
			Sign: S				
43756	Number of Connected Bargraph Modules	Read Only	Multiplier: 1	Unit:	Used to monitor the amount of connected bargraph modules.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 255			
			Sign: U				
43757	Oil Temperature (Aux101)	Read Only	Multiplier: 1	Unit: degF	Monitor point for the Oil Temperature input from the I/O Module.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -65534			
			Size (bits): 16	Upper Limit: 65535			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43758	Modbus Bus Message Count	Read Only	Multiplier: 1	Unit:	Modbus bus message count		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43759	Modbus CRC Errors Count	Read Only	Multiplier: 1	Unit:	Modbus CRC errors count		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43760	Modbus Exception Count	Read Only	Multiplier: 1	Unit:	Modbus exception count		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43761	Modbus No Response Count	Read Only	Multiplier: 1	Unit:	Modbus no response count		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43762	Modbus Slave Message Count	Read Only	Multiplier: 1	Unit:	Modbus slave message count		PC 2.x, PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43763	Frequency Match Error	Read Only	Multiplier: 0.001	Unit: Hz	frequency match error value used by frequency match PI loop		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43767	Load Govern kVAR Target	Read Only	Multiplier: 0.01	Unit: %	Indicates the final target set-point for generator set kVAR output when paralleled to utility		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43769	Load Govern kW Target	Read Only	Multiplier: 0.01	Unit: %	Indicates the final target set-point for generator set kW output when paralleled to utility		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43770	Permissive Close Allowed	Read Only	0: Not Allowed		Indicates when permissive sync check conditions have been met		PC 3.x
			1: Allowed				
43773	Phase Match Error	Read Only	Multiplier: 0.01	Unit: deg	Phase error signal for the synchronizer control algorithm		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: S				
43777	Start Type/Configurable Input #11 Switch	Read Only	0: Inactive		This is the status of the Configurable Input #11.		PC 2.x, PC 3.x
			1: Active				
43778	Scheduler Run Command	Read Only	0: Off		Indicates the current run command coming from the scheduler.		PC 2.x, PC 3.x
			1: No Load				
			2: With Load				
			3: Extended Parallel				
43785	Start Attempts Since Reset	Read Only	Multiplier: 1	Unit:	Number of start attempts since the last reset.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 4294967290			
			Sign: U				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43786	Start Attempts Since Reset	Read Only	Multiplier: 1	Unit:	Number of start attempts since the last reset.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 4294967290			
			Sign: U				
43787	Total Start Attempts	Read Only	Multiplier: 1	Unit:	Total number of start attempts.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 4294967295			
			Sign: U				
43788	Total Start Attempts	Read Only	Multiplier: 1	Unit:	Total number of start attempts.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 32	Upper Limit: 4294967295			
			Sign: U				
43789	Backup Start Disconnect/ Configurable Input #33 Switch	Read Only	0: Inactive		This is the status of the Configurable Input #33.		PC 3.x
			1: Active				
43791	Battery Charger Failed Switch	Read Only	0: Inactive		Battery Charger Failed Switch function output status; gives software Inactive/ Active state		PC 2.x, PC 3.x
			1: Active				
43792	Battle Short Switch	Read Only	0: Inactive		Battle Short Switch function output status (Active or In-active).		PC 2.x, PC 3.x
			1: Active				
43793	Configurable Input #1 Switch	Read Only	0: Inactive		Configurable Input #1 input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
43794	Configurable Input #2 Switch	Read Only	0: Inactive		Configurable Input #2 input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43795	Configurable Input #13 Switch	Read Only	0: Inactive		Configurable Input #13 input software state status. Gives software Inactive/Active state		PC 2.x, PC 3.x
			1: Active				
43796	Genset CB Open Command	Read Only	0: Inactive		generator set cb open command status		PC 3.x
			1: Active				
43800	Rated Cool-down Time	Read/Write	Multiplier: 1	Unit: seconds	Minimum time to spend at rated speed less than 10% load before normal shut-down is allowed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 600			
			Sign: U				
43801	Rated to Idle Transition Delay	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the delay time for transitioning from Rated to Idle speed. 0 seconds = feature is disabled.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			
			Sign: U				
43802	Rupture Basin Time	Read/Write	Multiplier: 0.1	Unit: seconds	Rupture Basin fault time delay		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 20			
			Sign: U				
43803	Start Time Delay	Read/Write	Multiplier: 1	Unit: seconds	Sets the time to wait from receiving a valid remote start signal until starting the generator set		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 300			
			Sign: U				
43804	Starting to Rated Ramp Time	Read/Write	Multiplier: 0.1	Unit: seconds	The time over which the speed reference is to ramp from starting speed to rated speed		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 30			
			Sign: U				
43805	Time Delay to Stop	Read/Write	Multiplier: 1	Unit: seconds	Sets time to run at rated speed before going to cool-down at idle. Does not apply to manual runs		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 600			
			Sign: U				
43806	Voltage Adjust	Read/Write	Multiplier: 0.01	Unit: %	A trim that allows the user to add/subtract an offset to the nominal voltage when calculating the voltage setpoint		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: -5			
			Size (bits): 16	Upper Limit: 5			
			Sign: S				
43807	Voltage Ramp Time	Read/Write	Multiplier: 0.01	Unit: seconds	The time period over which the voltage setpoint command should rise from 0% to the target voltage		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 5			
			Sign: U				
43808	Commit to Transfer State	Read Only	0: Not Committed		PTC – Indicates if system is committed to transferring to generator set		PC 3.x
			1: Committed				
43810	Battle Short Switch (Modbus)	Read/Write	0: Inactive		Trim to enable Battle Short via Modbus.		PC 2.x, PC 3.x
			1: Active				
43811	Exercise Switch (Modbus)	Read/Write	0: Inactive		Modbus exercise switch		PC 2.x, PC 3.x
			1: Active				
43813	Extended Parallel Switch (Modbus)	Read/Write	0: Inactive		Modbus extended parallel switch		PC 2.x, PC 3.x
			1: Active				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43814	PTC Mode Switch (Modbus)	Read/Write	0: Inactive		Modbus PTC Mode switch		PC 3.x
			1: Active				
43815	Start Type (Modbus)	Read/Write	0: Emergency		Modbus start type switch		PC 2.x, PC 3.x
			1: Non Emergency				
43817	Genset Circuit Breaker Inhibit	Read/Write	0: Inactive 1: Active		Identical operation to the configurable input of the same name. Opens genset breaker if closed; inhibits closure if genset breaker is open.	Configurable Input	PC 3.x
43818	Isolated Bus Speed Control Method	Read/Write	0: Constant		Sets the speed control method for isolated bus paralleling. Parameter is also known as Load Share Speed Droop Control Method		PC 2.x, PC 3.x
			1: Droop				
43819	Isolated Bus Voltage Control Method	Read/Write	0: Constant		Sets the voltage control method for isolated bus paralleling.		PC 2.x, PC 3.x
			1: Droop				
43820	Maximum Parallel Time (TDMP)	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the maximum time that the generator set can remain paralleled to the utility during closed transition transfers.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 1800			
			Sign: U				
43821	Programmed Transition Delay (TDPT)	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the time delay from when one source opens until the other closes during open transition transfers.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 60			
			Sign: U				
43822	Retransfer Delay (TDEN)	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the amount of time that the utility source must be available before the control will retransfer to that source.		PC 3.x
			Offset: 0	Lower Limit: 0			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Size (bits): 16	Upper Limit: 1800			
			Sign: U				
43823	Synchronizer Speed Control Method	Read/Write	0: Phase Match		Sets the speed control method for synchronizing.		PC 3.x
			1: Slip Frequency				
			2: External				
43824	Synchronizer Voltage Control Method	Read/Write	0: Voltage Match		Sets the voltage control method for synchronizing.		PC 3.x
			1: External				
43825	Transfer Delay (TDNE)	Read/Write	Multiplier: 0.1	Unit: seconds	Sets the amount of time that the generator set source must be available before the control will transfer to that source.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 120			
			Sign: U				
43826	Transition Type	Read/Write	0: Open Transition		Sets the load transfer transition type for use when Generator set Application Type = Power Transfer Control.		PC 3.x
			1: Hard Closed Transition				
			2: Soft Closed Transition				
43827	Retransfer Inhibit	Read/Write	0: Inactive 1: Active		Identical operation to the configurable input of the same name. Normally inhibits retransfer to the utility; under some conditions it is ignored; not the same as utility circuit breaker inhibit.	Configurable Input	PC 3.x
43828	Utility Circuit Breaker Inhibit	Read/Write	0: Inactive 1: Active		Identical operation to the configurable input of the same name. Opens utility main if closed; inhibits closure if utility main is open.	Configurable Input	PC 3.x
43829	Utility Parallel Speed Control Method	Read/Write	0: Load Govern		Sets the speed control method for utility paralleling.		PC 3.x
			1: Droop				

Addr.	Parameter	Access	Specifications	Description	Function	Control
43830	Utility Parallel Voltage Control Method	Read/Write	0: Load Govern	Sets the voltage control method for utility paralleling.		PC 3.x
			1: Droop			
			2: Load Govern with Droop Feed Forward			
43831	Aux101 Device 0 PCCnet Failure Response Type	Read/Write	0: Critical Device Response	Selects the generator set reaction to a loss of a Device 0 I/O module as critical (Shutdown) or non-critical (Warning).		PC 2.x, PC 3.x
			1: Non-Critical Device Response			
43832	Aux101 Device 1 PCCnet Failure Response Type	Read/Write	0: Critical Device Response	Selects the generator set reaction to a loss of a Device 1 I/O module as critical (Shutdown) or non-critical (Warning).		PC 2.x, PC 3.x
			1: Non-Critical Device Response			
43834	HMI113 Annunciator PCCnet Failure Response Type	Read/Write	0: Critical Device Response	Selects the generator set reaction to a loss of an annunciator as critical or non-critical. Selecting critical will cause a shutdown when the annunciator loses communication.		PC 2.x, PC 3.x
			1: Non-Critical Device Response			
43836	HMI220 PCCnet Failure Response Type	Read/Write	0: Critical Device Response	Selects the generator set reaction to a loss of an HMI220 operator panel as critical or non-critical. A critical response will shut-down the generator set when PCCnet communication is lost.		PC 2.x, PC 3.x
			1: Non-Critical Device Response			
43837	HMI320 PCCnet Failure Response Type	Read/Write	0: Critical Device Response	Selects the generator set reaction to a loss of an HMI320 operator panel as critical or non-critical. A critical response will shut-down the generator set when PCCnet communication is lost.		PC 2.x, PC 3.x
			1: Non-Critical Device Response			

Addr.	Parameter	Access	Specifications		Description	Function	Control
43839	PCCnet Device Failure Time Delay	Read/Write	Multiplier: 1	Unit: seconds	Selects the time allowed for arbitration to occur before a PCCnet failure fault is generated.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 8	Upper Limit: 250			
			Sign: U				
43840	Test With Load Enable	Read/Write	0: Disabled		Use to choose whether a test is with load or without load.		PC 3.x
			1: Enabled				
43841	Transfer Inhibit	Read/Write	0: Inactive 1: Active		Identical operation to the configurable input of the same name. Normally inhibits transfer to the genset; under some conditions it is ignored; not the same as genset circuit breaker inhibit.	Configurable Input	PC 3.x
43842	Commit to Transfer Method	Read/Write	0: Utility Disconnect		PTC – sets point at which system commits to transfer to generator set		PC 3.x
			1: Genset Start				
			2: No Commit				
43843	Commit to Transfer Timeout	Read/Write	Multiplier: 1	Unit: seconds	PTC – sets time system will wait for generator set when committed to transfer		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 3200			
			Sign: U				
43844	Commit to Transfer Timer	Read Only	Multiplier: 0.05	Unit: sec	PTC – remaining time system to wait for generator set when committed to transfer		PC 3.x
			Offset: 0	Lower Limit:			
			Size (bits): 16	Upper Limit:			
			Sign: U				
43845	Modbus Failure Time Delay	Read/Write	Multiplier: 1	Unit: seconds	Time delay before the control activates the Modbus failure fault after the master is sensed as no longer present.		PC 2.x, PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 10			

Addr.	Parameter	Access	Specifications		Description	Function	Control
			Sign: U				
43846	Modbus Communications Lost Response Method	Read/Write	0: Do Nothing		When set to Reset Commands will reset the Modbus control logicals to an inactive state when Modbus communications are lost		PC 2.x, PC 3.x
			1: Reset Commands				
43847	Modbus Clear Counters	Read/Write	0: Do Nothing		Resets all Modbus counters, including J14 if applicable.		PC 2.x, PC 3.x
			1: Clear Counters				
43848	Controlled Shutdown Max Ramp Unload Time	Read/Write	Multiplier: 1	Unit: seconds	maximum ramp unload time during a shutdown with cooldown		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 300			
			Sign: U				
43849	Genset kVAR Setpoint	Read/Write	Multiplier: 1	Unit: kVAR	Sets the generator set load govern kVAR base load internal operating setpoint in units of kVAR. Requires that Load Govern kVAR Setpoint Source = Internal and Load Govern kVAR Method = generator set kVAR.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 20000			
			Sign: S				
43850	Genset kVAR Setpoint Percent	Read/Write	Multiplier: 0.01	Unit: %	Sets the generator set load govern kVAR base load internal operating setpoint in % of standby kVA rating. Requires that Load Govern kVAR Setpoint Source = Internal and Load Govern kVAR Method = generator set kVAR.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 60			
			Sign: S				

Addr.	Parameter	Access	Specifications		Description	Function	Control
43851	Genset kW Setpoint	Read/Write	Multiplier: 1	Unit: kW	Sets the generator set load govern kW base load internal operating setpoint in units of kW. Requires that Load Govern kW Setpoint Source = Internal and Load Govern kW Method = Genset kW.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 20000			
			Sign: S				
43852	Genset kW Setpoint Percent	Read/Write	Multiplier: 0.01	Unit: %	Sets the generator set load govern kW base load internal operating setpoint in % of standby rating. Requires that Load Govern kW Setpoint Source = Internal and Load Govern kW Method = Genset kW.		PC 3.x
			Offset: 0	Lower Limit: 0			
			Size (bits): 16	Upper Limit: 100

THIS PAGE LEFT INTENTIONALLY BLANK

3. PowerCommand 2.x/3.x Modbus Fault Status Bitmaps

Note: Earlier versions of software may not support all of the Modbus registers in the following table. If a particular register is not available in your installation, it is possible that the Modbus connection is working but the controller software does not support that particular register.

Note: If an address or bit is not listed in this table it is not used.

Note: The external device can read 1–40 contiguous registers, write 1–40 contiguous registers, or read diagnostic counters.

Addr.	Bit#	Name	Fault Code	Event Name	Response	Control
40400	0	Fault Status Bitmap 1	115	Engine Magnetic Crankshaft Speed/ Position	Shutdown	PC 2.x, PC 3.x
40400	1	Fault Status Bitmap 1	122	Intake Manifold 1 Pressure: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40400	2	Fault Status Bitmap 1	123	Intake Manifold 1 Pressure: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40400	3	Fault Status Bitmap 1	124	Intake Manifold 1 Pressure: Moderately Severe	Warning	PC 2.x, PC 3.x
40400	4	Fault Status Bitmap 1	135	Engine Oil Rifle Pressure 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40400	5	Fault Status Bitmap 1	141	Engine Oil Rifle Pressure 1: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40400	6	Fault Status Bitmap 1	143	Engine Oil Rifle Pressure –Moderately Severe	Warning	PC 2.x, PC 3.x
40400	7	Fault Status Bitmap 1	144	Engine Coolant Temp 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40400	8	Fault Status Bitmap 1	145	Engine Coolant Temp 1: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40400	9	Fault Status Bitmap 1	146	Engine Coolant Temp: Moderately Above Normal	Derate	PC 2.x, PC 3.x
40400	10	Fault Status Bitmap 1	151	Engine Coolant Temp: Severely Above Normal	Shutdown	PC 2.x, PC 3.x
40400	11	Fault Status Bitmap 1	153	Intake Manifold 1 Temp: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40400	12	Fault Status Bitmap 1	154	Intake Manifold 1 Temp: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40400	13	Fault Status Bitmap 1	155	Intake Manifold 1 Temp: Severely Above Normal	Shutdown	PC 2.x, PC 3.x
40400	14	Fault Status Bitmap 1	187	Sensor Supply 2: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40400	15	Fault Status Bitmap 1	195	Coolant Level Sensor 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x

Addr.	Bit#	Name	Fault Code	Event Name	Response	Control
40401	0	Fault Status Bitmap 2	196	Coolant Level Sensor 1: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40401	1	Fault Status Bitmap 2	197	Coolant Level: Below Normal – Moderately Severe	Warning	PC 2.x, PC 3.x
40401	2	Fault Status Bitmap 2	212	Engine Oil Temp Sensor 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40401	3	Fault Status Bitmap 2	213	Engine Oil Temp Sensor 1: Vtg below Normal	Warning	PC 2.x, PC 3.x
40401	4	Fault Status Bitmap 2	214	Engine Oil Temp: Above Normal – Most severe	Shutdown	PC 2.x, PC 3.x
40401	5	Fault Status Bitmap 2	221	Barometric Pressure: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40401	6	Fault Status Bitmap 2	222	Barometric Pressure Sensor: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40401	7	Fault Status Bitmap 2	223	Eng Oil Burn Valve Solenoid: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40401	8	Fault Status Bitmap 2	224	Engine Oil Burn Valve Solenoid: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40401	9	Fault Status Bitmap 2	227	Sensor Supply 2: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40401	10	Fault Status Bitmap 2	228	Coolant Pressure: Below Normal–Most Severe	Shutdown	PC 2.x, PC 3.x
40401	11	Fault Status Bitmap 2	231	Coolant Pressure Sensor: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40401	12	Fault Status Bitmap 2	232	Coolant Pressure Sensor: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40401	13	Fault Status Bitmap 2	234	Engine Crankshaft Speed/Posn: Above Normal	Shutdown	PC 2.x, PC 3.x
40401	14	Fault Status Bitmap 2	235	Coolant Level: Below Normal–Most Severe	Shutdown	PC 2.x, PC 3.x
40401	15	Fault Status Bitmap 2	238	Sensor Supply 3: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40402	0	Fault Status Bitmap 3	239	Voltage Supply C High Error	Warning	PC 2.x, PC 3.x
40402	1	Fault Status Bitmap 3	245	Radiator Fan Control Driver Low Error	Warning	PC 2.x, PC 3.x
40402	2	Fault Status Bitmap 3	261	Engine Fuel Temp: Above Normal–Moderately Severe	Warning	PC 2.x, PC 3.x
40402	3	Fault Status Bitmap 3	263	Engine Fuel Temp Sensor 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40402	4	Fault Status Bitmap 3	265	Engine Fuel Temp Sensor 1: Vtg Below Normal	Warning	PC 2.x, PC 3.x

Addr.	Bit#	Name	Fault Code	Event Name	Response	Control
40402	5	Fault Status Bitmap 3	266	Engine Fuel Temp: Above Normal–Most severe	Shutdown	PC 2.x, PC 3.x
40402	6	Fault Status Bitmap 3	271	Fuel Pump Pressurizing Assembly 1: Vtg Below Normal	Warning	PC 2.x, PC 3.x
40402	7	Fault Status Bitmap 3	272	Fuel Pump Pressurizing Assembly 1: Vtg Above Normal	Warning	PC 2.x, PC 3.x
40402	8	Fault Status Bitmap 3	281	APC_DIESEL_CYL_PRS_IMBAL_ERROR	Warning	PC 2.x, PC 3.x
40402	9	Fault Status Bitmap 3	285	SAE J1939 Muxing PGN Timeout: Abnormal Update Rate	Warning	PC 2.x, PC 3.x
40402	10	Fault Status Bitmap 3	286	SAE J1939 Muxing Config: Out of Calibration	Warning	PC 2.x, PC 3.x
40402	13	Fault Status Bitmap 3	295	AMBIENT_AIR_PRESS_KEYON_ERROR	Warning	PC 2.x, PC 3.x
40402	14	Fault Status Bitmap 3	319	RTC PWR Intr: Data Erratic Intermittent or Wrong	Warning	PC 2.x, PC 3.x
40402	15	Fault Status Bitmap 3	322	Injector Solenoid Driver Cylinder 1: UnderCurrent	Warning	PC 2.x, PC 3.x
40403	0	Fault Status Bitmap 4	323	Injector Solenoid Driver Cylinder 5: UnderCurrent	Warning	PC 2.x, PC 3.x
40403	1	Fault Status Bitmap 4	324	Injector Solenoid Driver Cylinder 3: UnderCurrent	Warning	PC 2.x, PC 3.x
40403	2	Fault Status Bitmap 4	325	Injector Solenoid Driver Cylinder 6: UnderCurrent	Warning	PC 2.x, PC 3.x
40403	3	Fault Status Bitmap 4	331	Injector Solenoid Driver Cylinder 2: UnderCurrent	Warning	PC 2.x, PC 3.x

4. NFPA 110 & Extended Annunciation Bitmap

Table 4-1 NFPA110 bitmap (See Section 1 Reg 40016, Section 2 Reg 40716, 40717 and Section 5)

BIT	DESCRIPTION
0 (MSB)	Common Alarm
1	Genset Supplying Load
2	Genset Running
3	Not in Auto
4	High Battery Voltage
5	Low Battery Voltage
6	Charger AC Failure
7	Fail to Start
8	Low Coolant Temperature
9	Pre-high Engine Temperature
10	High Engine Temperature
11	Pre-low Oil Pressure
12	Low Oil Pressure
13	Overspeed
14	Low Coolant Level
15 (LSB)	Low Fuel Level

Table 4-2 Extended Annunciation Bitmap (See Section 1 Reg. 40017 and Section 5)

BIT	DESCRIPTION
0 (MSB)	Check Genset
1	Ground Fault
2	High AC Voltage
3	Low AC Voltage
4	Under Frequency
5	Overload
6	Overcurrent
7	Short Circuit
8	Reverse KW
9	Reverse KVAR
10	Fail to Sync
11	Fail to Close
12	Load Demand
13	Genset Circuit Breaker Tripped
14	Utility Circuit Breaker Tripped
15 (LSB)	Emergency Stop

Table 4-3 NFPA110 bitmap (See Section 6)

BIT	DESCRIPTION
0 (MSB)	Source 1 Connected
1	Source 2 Connected
2	NA
3	Not in Auto
4	NA
5	NA
6	Charger AC Failure
7	NA
8	NA
9	NA
10	NA
11	NA
12	NA
13	NA
14	NA
15 (LSB)	NA

Table 4-4 Extended Annunciation Bitmap (See Section 6)

BIT	DESCRIPTION
0 (MSB)	Source 1 Available
1	Source 2 Available
2	Source 1 Connected
3	Source 2 Connected
4	ATS Common Alarm
5	Not In Auto
6	Test / Exercise In Progress
7	Low Battery Voltage
8	Load Shed
9	Transfer Inhibit
10	Retransfer Inhibit
11	Fail To Close
12	Fail To Disconnect
13	Fail To Synchronize
14	Bypass to Source 1
15 (LSB)	Bypass to Source 2

THIS PAGE LEFT INTENTIONALLY BLANK

5. DMC 1000 Modbus Parametric Data

Addr.	System Name	Access	Specifications		Description	Function
42001	MB Logical Read Address	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: .000 Upper Limit: 65535.000 Default: 0	Logical address to be read via Modbus	Communications
42002	MB Logical Read Data	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Logical data to be read via Modbus	Communications
42009	Device Type	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Hard coded device type id = 52 (0x0034)	Communications
42010	Software Version	Read Only	Multiplier: 0.000100000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Software version number	Controller Information
42012	Current Fault Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	The most recently occurring fault which is still active	Fault and Event Info
42018	Genset L1N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default	Generator set L1N voltage	Voltage
42019	Genset L2N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default	Generator set L2N voltage	Voltage
42020	Genset L3N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default	Generator set L3N voltage	Voltage
42021	Genset LN Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default	Generator set LN average voltage	Voltage

Addr.	System Name	Access	Specifications		Description	Function
42022	Genset L1L2 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default:	Generator set L1L2 voltage	Voltage
42023	Genset L2L3 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default:	Generator set L2L3 voltage	Voltage
42024	Genset L3L1 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default:	Generator set L3L1 voltage	Voltage
42025	Genset LL Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default:	Generator set LL average voltage	Voltage
42026	Genset L1 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default	Generator set L1 current	Current
42027	Genset L2 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default	Generator set L2 current	Current
42028	Genset L3 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default	Generator set L3 current	Current
42029	Genset Average Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default	Generator set average current	Current
42030	Genset L1 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Generator set L1 kW	Current
42031	Genset L2 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Generator set L2 kW	Current

Addr.	System Name	Access	Specifications		Description	Function
42032	Genset L3 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Generator set L3 kW	Power
42033	Genset Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Generator set total kW	Power
42034	Genset L1 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Generator set L1 kVAR	Power
42035	Genset L2 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Generator set L2 kVAR	Power
42036	Genset L3 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Generator set L3 kVAR	Power
42037	Genset Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Generator set total kVAR	Power
42038	Genset Total Power Factor	Read Only	Multiplier: 0.010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: Upper Limit: Default:	Generator set total power factor	Power
42039	Genset L1 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Generator set L1 kVA	Power
42040	Genset L2 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Generator Set L2 kVA	Power
42041	Genset L3 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Generator set L3 kVA	Power

Addr.	System Name	Access	Specifications		Description	Function
42042	Genset Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set total kVA	Power
42043	MB Genset Frequency	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: Hz Upper Limit: Hz Default:	Generator set line frequency scaled by 10 = 1Hz for Modbus	Communications
42044	Genset Total Negative kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total negative kWh accumulation	Energy
42046	Genset Total Positive kWh	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total positive kWh accumulation	Energy
42048	Genset Total Net kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total net kWh accumulation	Energy
42050	Genset Total Negative kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total negative kVARh accumulation	Energy
42052	Genset Total Positive kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total positive kVARh accumulation	Energy
42054	Genset Total Net kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total net kVARh accumulation	Energy
40056	Genset Total kVAh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVAh Lower Limit: kVAh Upper Limit: kVAh Default:	Generator set total kVAh accumulation	Energy

Addr.	System Name	Access	Specifications		Description	Function
42058	Genset Available Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default:	Calculated Amps which represent 100% generator set bus current -- used by barograph	Current
42059	Genset L1 Current Percent	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L1 current as percent of generator set total current capacity--used by barograph	Current
42060	Genset L2 Current Percent	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L2 current as percent of generator set total current capacity--used by barograph	Current
42061	Genset L3 Current Percent	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L3 current as percent of generator set total current capacity--used by barograph	Current
42062	Genset Total kW Percent	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: Upper Limit: Default:	Generator set total kW as percent of total generator set capacity -- used by barograph	Power
42063	Genset Frequency Percent	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set frequency as percent of system frequency -- used by barograph	Frequency
42064	Genset L1L2 Voltage%	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L1L2 voltage%	Voltage
42065	Genset L2L3 Voltage%	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L2L3 voltage%	Voltage

Addr.	System Name	Access	Specifications		Description	Function
42066	Genset L3L1 Voltage%	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Generator set L3L1 voltage%	Voltage
42118	Utility L1N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L1N voltage	Voltage
42119	Utility L2N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L2N voltage	Voltage
42120	Utility L3N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L3N voltage	Voltage
42121	Utility LN Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility LN average voltage	Voltage
42122	Utility L1L2 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L1L2 voltage	Voltage
42123	Utility L2L3 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L2L3 voltage	Voltage
42124	Utility L3L1 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility L3L1 voltage	Voltage
42125	Utility LL Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Upper Limit: Default: 0	Utility LL average voltage	Voltage
42126	Utility L1 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default:	Utility L1 current	Current

Addr.	System Name	Access	Specifications		Description	Function
42127	Utility L2 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default:	Utility L2 current	Current
42128	Utility L3 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default:	Utility L3 current	Current
42129	Utility Average Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Upper Limit: Default:	Utility average current	Current
42130	Utility L1 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Utility L1 kW	Power
42131	Utility L2 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Utility L2 kW	Power
42132	Utility L3 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Utility L3 kW	Power
42133	Utility Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Utility total kW	Power
42134	Utility L1 kVARt	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Utility L1 kVAR	Power
42135	Utility L2 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Utility L2 kVAR	Power
42136	Utility L3 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Utility L3 kVAR	Power

Addr.	System Name	Access	Specifications		Description	Function
42137	Utility Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Utility total kVAR	Power
42138	Utility Total Power Factor	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: Upper Limit: Default:	Utility total power factor	Power
42139	Utility L1 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Utility L1 kVA	Power
42140	Utility L2 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Utility L2 kVA	Power
42141	Utility L3 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Utility L3 kVA	Power
42142	Utility Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Utility total kVA	Power
42143	MB Utility Frequency	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: Upper Limit: Default:	Utility line frequency scaled by 10 = 1Hz for Modbus	Communications
42144	Utility Total Negative kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: Upper Limit: Default:	Utility total negative kWh accumulation	Energy
42146	Utility Total Positive kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: Upper Limit: Default:	Utility total positive kWh accumulation	Energy
42148	Utility Total Net kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kWh Lower Limit: Upper Limit: Default:	Utility total net kWh accumulation	Energy

Addr.	System Name	Access	Specifications		Description	Function
42150	Utility Total Negative kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: Upper Limit: Default:	Utility total negative kVARh accumulation	Energy
42152	Utility Total Positive kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: Upper Limit: Default:	Utility total positive kVARh accumulation	Energy
42154	Utility Total Net kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVARh Lower Limit: Upper Limit: Default:	Utility total net kVARh accumulation	Energy
42156	Utility Total kVAh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: Upper Limit: Default:	Utility total kVAh accumulation	Energy
42158	System Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Sum of generator set bus and utility bus kW	Power
42159	System Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	Sum of generator set bus and utility bus kVAR	Power
42160	System Total Power Factor	Read Only	Multiplier: 0.010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: Upper Limit: Default:	System total power factor (totalized value of utility bus plus generator set bus)	Power
42161	System Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: Upper Limit: Default:	Sum of generator set bus and utility bus kVA	Power
42162	Utility L1 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	barograph	Current

Addr.	System Name	Access	Specifications		Description	Function
42163	Utility L2 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	barograph	Current
42164	Utility L3 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	barograph	Current
42165	Utility Total kW Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: Upper Limit: Default:	Utility total kW as percent of total utility capacity -- used by barograph	Power
42166	Utility Frequency Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Utility frequency as percent of System Frequency -- used by barograph	Frequency
42167	Utility L1L2 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Utility L1L2 voltage%	Voltage
42168	Utility L2L3 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Utility L2L3 voltage%	Voltage
42169	Utility L3L1 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: Upper Limit: Default:	Utility L3L1 voltage%	Voltage
42200	Total Number of Gensets	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Number of generator sets with non-zero ratings entered	System Information
42201	Total System Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Sum of the generator set kW ratings	System Information

Addr.	System Name	Access	Specifications		Description	Function
42202	Total Online Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Sum of the generator set kW ratings for generator sets which are online	System Information
42203	Programmed Transition Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown value of the programmed transition timer	PTC Timers
42204	Transfer Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default: 0	Countdown value of the transfer timer	PTC Timers
42205	Retransfer Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown value of the retransfer timer	PTC Timers
42206	Maximum Parallel Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown value of the maximum parallel timer	PTC Timers
42207	kW Load Reference	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	kW control reference value for utility paralleling	Master Load Control
42212	Active Transition Timer	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown timer value of active timer	PTC Timers
42213	Hardware Version	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Indicates the hardware version of the board	Discrete Inputs
42214	Controller On Time	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: seconds Lower Limit: 0.000 Upper Limit: 4294967295.000 Default: 0.000	Amount of time in seconds controller has been powered	Controller Information
42220	kVAR Load Reference	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: Upper Limit: Default:	kVAR control reference value for extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42221	kVAR Load Setpoint Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: Upper Limit: Default	Engineering units value for the kVAR load setpoint analog input	Analog Inputs
42222	kW Load Setpoint Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: Upper Limit: Default:	Engineering units value for the kW load setpoint analog input	Analog Inputs
42223	Power Factor Setpoint	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: Upper Limit: Default:	Power factor setpoint analog input value (uses kVAR load setpoint analog input)	Analog Inputs
42226	Sync Phase Difference	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: Upper Limit: Default:	Utility to generator set L1 voltage phase angle	Phase
42250	Current Add Level	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Indicates the next level to add	Load Add Shed Control
42251	Current Shed Level	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: Upper Limit: Default	Indicates the next level to shed	Load Add Shed Control
42291	Battery Voltage Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: Upper Limit: Default	Engineering units value for the battery voltage analog input	Analog Inputs
42292	kVAR Master Load Control Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: Upper Limit: Default	Voltage level commanded to kVAR master load control analog output	Analog Outputs
42293	kW Master Load Control Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: Upper Limit: Default	Voltage level commanded to kW master load control analog output	Analog Outputs

Addr.	System Name	Access	Specifications		Description	Function
42294	Master Frequency Bias Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: Upper Limit: Default	Voltage level commanded to master frequency bias analog output	Analog Outputs
42295	Master Voltage Bias Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: Upper Limit: Default:	Voltage level commanded to master voltage bias analog output	Analog Outputs
42305	Genset 01 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 1000.000	Sets gen1 kW rating	System Information
42306	Genset 02 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen2 kW rating	System Information
42307	Genset 03 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen3 kW rating	System Information
42308	Genset 04 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen4 kW rating	System Information
42309	Genset 05 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen5 kW rating	System Information
42310	Genset 06 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen6 kW rating	System Information

Addr.	System Name	Access	Specifications		Description	Function
42311	Genset 07 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen7 kW rating	System Information
42312	Genset 08 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen8 kW rating	System Information
42313	Genset 09 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen9 kW rating	System Information
42314	Genset 10 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen10 kW rating	System Information
42315	Genset 11 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen11 kW rating	System Information
42316	Genset 12 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.00 kW Default: 0.000	Sets gen12 kW rating	System Information
42317	Programmed Transition Delay (TDPT)	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 60 seconds Default: 3.000	Sets the programmed transition time delay	PTC Timers
42318	Transfer Delay (TDNE)	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 120 seconds Default: 10.000	Sets the transfer time delay	PTC Timers

Addr.	System Name	Access	Specifications		Description	Function
42319	Retransfer Delay (TDEN)	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 1800 seconds Default: 600.000	Sets the retransfer time delay	PTC Timers
42320	Maximum Parallel Time (TDMP)	Read/Write	Multiplier: 0.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit seconds Lower Limit: 0.000 seconds Upper Limit: 1800 seconds Default: 20.000	Sets the maximum parallel time for soft load transfers	PTC Timers
42321	Genset Bus %kW Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: -5.000 % Upper Limit: 105.000 % Default: 80.000	Sets %kW generator set output level for open loop base load extended paralleling	Master Load Control
42322	Genset Nominal Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 45000.000 Volts Default: 480.000	Generator set nominal voltage	AC Setup
42323	Utility Nominal Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 45000.000 Volts Default: 480.000	Utility nominal voltage	AC Setup
42324	Genset Center Frequency	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60.000	Sets the center frequency for the generator set frequency sensor bandwidth settings	PTC Sensors
42325	Utility Center Frequency	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60.000	Sets the center frequency for the utility frequency sensor bandwidth settings	PTC Sensors
42327	System Frequency	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60.000	Use to define the system nominal frequency	System Information

Addr.	System Name	Access	Specifications		Description	Function
42330	Genset Bus kW Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32767.000 kW Default: 0.000	Sets the base load kW setpoint in closed loop extended paralleling	Master Load Control
42331	Genset Bus kVAR Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: 0.000 kVAR Upper Limit: 32767 kVAR Default: 0.000	Sets the base load kVAR setpoint in closed loop extended paralleling	Master Load Control
42332	Genset Bus %kVAR Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: -5.000 % Upper Limit: 105.000 % Default: 0.000	Sets %kVAR generator set output level for open loop base load extended paralleling	Master Load Control
42333	Genset Bus Power Factor Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: 0.700 Upper Limit: 1.000 Default: 1.000	Sets the desired generator set bus power factor in closed loop extended paralleling	Master Load Control
42334	Genset Unloaded Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000 kW Upper Limit: 32767 kW Default: 50.000	Setpoint for generator set unloaded level	Master Load Control
42337	Utility Bus kW Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000 kW Upper Limit: 32767 kW Default: 100.000	Sets the peak shave kW setpoint in closed loop extended paralleling	Master Load Control
42338	Utility Bus kW Constraint Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000 kW Upper Limit: 32767.000 kW Default: 100.000	Sets the utility kW constraint level for base load extended paralleling	Master Load Control
42339	Utility Bus kVAR Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: 32768.000 kVAR Upper Limit: 32767.000 kVAR Default: 100.000	Sets the peak shave kVAR setpoint in closed loop extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42340	Utility Bus Power Factor Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 8 Sign: S	Unit: Lower Limit: 0.700 Upper Limit: 1.000 Default: 1.000	Sets the desired utility bus power factor in closed loop extended paralleling	Master Load Control
42341	Utility Un-loaded Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000 kW Upper Limit: 32767.000 kVAR Default: 50.000	Setpoint for utility unloaded level	Master Load Control
42348	Extended Parallel Ramp Load Time	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 seconds Default: 60.000	Sets ramp load time for extended paralleling	Master Load Control
42351	Fail To Synchronize Time	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 seconds Default: 120.000	Sets the fail to synchronize diagnostic time delay	Master Sync Control
42354	Slip Frequency	Read/Write	Multiplier: .001000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: Hz Lower Limit: -3.000 Hz Upper Limit: 3.000 Hz Default: 0.100	Sets the synchronizer slip frequency (used when sync method is slip)	Master Sync Control
42355	Start Time Delay (TDES)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 3600.000 seconds Default: 0.000	Sets the generator sets start time delay	PTC Operating Mode
42356	Stop Time Delay (TDEC)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 3600.000 seconds Default: 0.000	Sets the generator sets stop time delay	PTC Operating Mode
42364	Genset Bus Load Add Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 60.000 seconds Default: 1.000	Indicates delay between add levels when all generator sets are online and no utility	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42365	Utility Bus Load Add Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 60.000 seconds Default: 1.000	Indicates delay between add levels when on utility	Load Add Shed Control
42366	Load Shed Delay	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: seconds Lower Limit: 1.000 seconds Upper Limit: 10.000 seconds Default: 1.000	Indicates delay between shed levels when on generator sets	Load Add Shed Control
42373	Load 1 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 1.000	Indicates which add level load 1 is assigned to	Load Add Shed Control
42374	Load 2 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 2.000	Indicates which add level load 2 is assigned to	Load Add Shed Control
42375	Load 3 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 3.000	Indicates which add level load 3 is assigned to	Load Add Shed Control
42376	Load 4 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 4.000	Indicates which add level load 4 is assigned to	Load Add Shed Control
42377	Load 5 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 5.000	Indicates which add level load 5 is assigned to	Load Add Shed Control
42378	Load 6 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 6.000	Indicates which add level load 6 is assigned to	Load Add Shed Control
42379	Load 1 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 0.000	Indicates which shed level load 1 is assigned to	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42380	Load 2 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 5.000	Indicates which shed level load 2 is assigned to	Load Add Shed Control
42381	Load 3 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 4.000	Indicates which shed level load 3 is assigned to	Load Add Shed Control
42382	Load 4 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 3.000	Indicates which shed level load 4 is assigned to	Load Add Shed Control
42383	Load 5 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 2.000	Indicates which shed level load 5 is assigned to	Load Add Shed Control
42384	Load 6 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 5.000 Default: 1.000	Indicates which shed level load 6 is assigned to	Load Add Shed Control
42386	Genset Bus %kW Overload Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: % Lower Limit: 80.000 % Upper Limit: 140.000 % Default: 105.000	Use to set the %kW threshold for gen bus overload condition	System Information
42387	Genset Bus kW Overload Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: second Lower Limit: 0.000 second Upper Limit: 120.000 second Default: 60.000	Sets the delay time for overload based on kW	System Information
42388	Genset Bus Underfrequency Overload Threshold	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 0.100 Hz Upper Limit: 10.000 Hz Default: 3.000	Use to set the underfrequency offset threshold for gen bus overload condition	System Information
42389	Genset Bus Underfrequency Overload Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: second Lower Limit: 0.000 Hz Upper Limit: 20.000 Hz Default: 3.000	Sets the delay time for overload based on frequency	System Information

Addr.	System Name	Access	Specifications		Description	Function
42395	Load Demand Initial Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 1.000 minute Upper Limit: 60.000 minute Default: 5.000	Sets the initial delay time before load demand will operate	Load Demand Control
42396	Load Demand Restart Percent	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: % Lower Limit: 20 % Upper Limit: 100 % Default: 80.000	Sets the load demand restart threshold (make larger than shutdown percent)	Load Demand Control
42397	Load Demand Run Hours Differential	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: Hours Lower Limit: 1.000 Hours Upper Limit: 500 Hours Default: 50.000	Sets run hours differential for restarting a generator set stopped due to load demand	Load Demand Control
42398	Load Demand Shutdown Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 1.000 minute Upper Limit: 60.000 minute Default: 5.000	Sets the delay time between stopping generator sets due to load demand	Load Demand Control
42399	Load Demand Shutdown Percent	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: % Lower Limit: 20 % Upper Limit: 100 % Default: 60.000	Sets the load demand shutdown threshold (make smaller than restart percent)	Load Demand Control
42400	Genset Fail Time Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 seconds Default: 60.000	Sets how long to wait for a generator set to come online before declaring it failed	Load Demand Control
42401	Util CB Fail to Close Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.100 seconds Upper Limit: 1.000 seconds Default: 0.26	Sets the utility breaker fail to close time delay	Breaker Control
42402	Util CB Fail to Open Delay	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: seconds Lower Limit: 0.200 seconds Upper Limit: 5.000 seconds Default: 1	Sets the utility breaker fail to open time delay	Breaker Control

Addr.	System Name	Access	Specifications		Description	Function
42403	Util CB Re-charge Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 60 seconds Default: 10.000	Sets the time to allow for utility breaker recharge	Breaker Control
42404	Gen CB Fail to Close Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.100 seconds Upper Limit: 1.000 seconds Default: 0.260	Sets the generator set breaker fail to close time delay	Breaker Control
42405	Gen CB Fail to Open Delay	Read/Write	Multiplier: 0.200000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: seconds Lower Limit: 0.200 seconds Upper Limit: 5.000 seconds Default: 1.000	Sets the generator set breaker fail to open time delay	Breaker Control
42406	Gen CB Re-charge Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 60.000 seconds Default: 10.000	Sets the time to allow for generator set breaker recharge	Breaker Control
42407	Permissive Phase Window	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: 0.100 degrees Upper Limit: 20.000 degrees Default: 10.000	Sets the permissive +/- phase angle window for the sync check function	Master Sync Control
42408	Permissive Voltage Window	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: 0.5000 % Upper Limit: 10.000 % Default: 5.000	Sets the permissive +/- voltage acceptance window for the sync check function	Master Sync Control
42409	Permissive Window Time	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 0.500 seconds Upper Limit: 5.000 seconds Default: 0.500	Sets the permissive acceptance window dwell time for the sync check function	Master Sync Control
42410	Permissive Frequency Window	Read/Write	Multiplier: .001000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Hz Lower Limit: 0.001 Hz Upper Limit: 1.000 Hz Default: 1.000	Sets the maximum frequency difference allowed for permissive close	Master Sync Control

Addr.	System Name	Access	Specifications		Description	Function
42412	Sync Phase Offset	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: -50.000 degrees Upper Limit: 50.000 degrees Default: 0.000	Sets a sync phase offset to accommodate sync across transformer with phase shift	Master Sync Control
42414	kW Kp	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 1000.000 Default: 60.000	Proportional gain for kW closed loop control in extended paralleling	Master Load Control
42415	kW KI	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 255.000 Default: 60.000	Integral gain for kW closed loop control in extended paralleling	Master Load Control
42416	kVAR Kp	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 1000.000 Default: 120.000	Proportional gain for kVAR closed loop control in extended paralleling	Master Load Control
42417	kVAR KI	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 0.000 Upper Limit: 255.000 Default: 50.000	Integral gain for kVAR closed loop control in extended paralleling	Master Load Control
42418	Scheduler Program Select	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 12.000 Default: 1.000	Selects which scheduler program to view or edit	System Scheduler
42423	Scheduler Program x Start Hour	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: hour Lower Limit: 0.000 hour Upper Limit: 23.000 hour Default: 0.000	Use to adjust start hour for the selected program	System Scheduler
42424	Scheduler Program x Start Minute	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 0.000 minute Upper Limit: 59.000 minute Default: 0.000	Use to adjust start minute for the selected program	System Scheduler
42425	Scheduler Program x Duration Hours	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: hour Lower Limit: 0.000 hour Upper Limit: 23.000 hour Default: 0.000	Use to adjust duration hours for the selected program	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42426	Scheduler Program x Duration Minutes	Read / Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 0.000 minute Upper Limit: 59.000 minute Default: 0.000	Use to adjust duration minutes for the selected program	System Scheduler
42427	Scheduler Exception Select	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: 1.000 Upper Limit: 6.000 Default: 1.000	Selects which scheduler exception to view or edit	System Scheduler
42430	Scheduler Exception x Month	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: month Lower Limit: 1.000 month Upper Limit: 12.000 month Default: 1.000	Use to adjust the month of the selected exception	System Scheduler
42431	Scheduler Exception x Date	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: date Lower Limit: 1.000 date Upper Limit: 31.000 date Default: 1.000	Use to adjust the date of the selected exception	System Scheduler
42432	Scheduler Exception x Hour	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: hour Lower Limit: 0.000 hour Upper Limit: 23.000 hour Default: 0.000	Use to adjust the start hour of the selected exception	System Scheduler
42433	Scheduler Exception x Minute	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 0.000 minute Upper Limit: 59.000 minute Default: 0.000	Use to adjust the start minute of the selected exception	System Scheduler
42434	Scheduler Exception x Duration Days	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: days Lower Limit: 0.000 days Upper Limit: 44.000 days Default: 0.000	Use to adjust the duration days of the selected exception	System Scheduler
42435	Scheduler Exception x Duration Hours	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: hour Lower Limit: 0.000 hour Upper Limit: 23 hour Default: 0.000	Use to adjust the duration hours of the selected exception	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42436	Scheduler Exception x Duration Minutes	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: 0.000 minute Upper Limit: 59.000 minute Default: 0.000	Use to adjust the duration minutes of the selected exception	System Scheduler
42440	Genset PT Primary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 45000.000 Volts Default: 480	Generator Set PT primary voltage	AC Setup
42441	Genset PT Secondary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 500 Volts Default: 120	Generator set PT secondary voltage	AC Setup
42442	Genset CT Primary Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amp Lower Limit: 5.000 Amp Upper Limit: 10000.000 Amp Default: 100	Generator set CT primary current	AC Setup
42445	Utility PT Primary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 45000.000 Volts Default: 480	Utility PT primary voltage	AC Setup
42446	Utility PT Secondary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 110.000 Volts Upper Limit: 500.000 Volts Default: 120	Utility PT secondary voltage	AC Setup
42447	Utility CT Primary Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: 5.000 Amps Upper Limit: 10000.00 Amps Default: 100	Utility primary current	AC Setup
42449	Load Add Shed Required Online Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.000 kW Default: 0	Generator set kW capacity that must be online to start timed load add; 0 disables this	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42450	Load Demand Minimum On-line Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32767.000 kW Default: 0	Sets how much capacity must always be online regardless of what the load is	Load Demand Control
42451	Load Demand Restart Delay	Read/Write	Multiplier: 0.100000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: seconds Lower Limit: 0.000 seconds Upper Limit: 25.000 seconds Default: 1	Sets generator restart delay time to avoid nuisance restarts due to load transients	Load Demand Control
42452	Utility Available Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: 1.000 Amps Upper Limit: 32000.000 Amps Default: 1000	barograph	AC Setup
42453	Total Utility Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 1.000 kW Upper Limit: 32000.00 kW Default: 1000	Use to set how kW = 100% utility kW -- Used by barograph	AC Setup
42455	24 V High Battery Voltage Threshold	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: 28.000 VDC Upper Limit: 34.000 VDC Default: 32	Sets 24V high battery voltage fault threshold	Battery Voltage Protection
42456	24 V Low Battery Voltage Threshold	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: 22.000 VDC Upper Limit: 26.000 VDC Default: 24	Sets 24V low battery voltage fault threshold	Battery Voltage Protection
42457	12 V High Battery Voltage Threshold	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: 14.000 VDC Upper Limit: 17.000 VDC Default: 16	Sets 12V high battery voltage fault threshold	Battery Voltage Protection
42458	12 V Low Battery Voltage Threshold	Read/Write	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: 11.000 VDC Upper Limit: 13.000 VDC Default: 12	Sets 12V low battery voltage fault threshold	Battery Voltage Protection

Addr.	System Name	Access	Specifications		Description	Function
42459	High Battery Voltage Set time	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: second Lower Limit: 2 second Upper Limit: 60 second Default: 60	Sets high battery voltage set time	Battery Voltage Protection
42460	Low Battery Voltage Set Time	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: second Lower Limit: 2 second Upper Limit: 60 second Default: 60	Sets low battery voltage set time	Battery Voltage Protection
42462	Genset Online Capacity Sensor Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: 0.000 kW Upper Limit: 32000.000 kW Default: 0	Sets the online kW threshold at which generator set bus is available for loading	PTC Sensors
42500	Fault Status BitMap 1	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Bitmapped state of utility and other faults – 32 bits	Fault and Event Info
42502	Fault Status BitMap 2	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Bitmapped state of generator set and other faults – 32 bits	Fault and Event Info
42504	Event Status BitMap 1	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Bitmapped state of events – 32 bits	Fault and Event Info
42506	Genset Metering Fault Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Bitmapped word with status of generator set AC metering out of range conditions	AC Interrupt Service
42507	Utility Metering Fault Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Bitmapped word with status of utility AC metering out of range conditions	AC Interrupt Service
42704	Gen1 Online Time	Read Only	Multiplier: 0.000277778 Offset: 0 Size (bits): 32 Sign: U	Unit: Hours Lower Limit: 0.000 Hours Upper Limit: 1193046.000 Hours Default: 0	Total online time for Gen1	System Information

Addr.	System Name	Access	Specifications		Description	Function
42706	Gen2 Online Time	Read Only	Multiplier: 0.000277778 Offset: 0 Size (bits): 32 Sign: U	Unit: Hours Lower Limit: 0.000 Hours Upper Limit: 1193046.000 Hours Default: 0	Total online time for Gen2	System Information
42708	Gen3 Online Time	Read Only	Multiplier: 0.000277778 Offset: 0 Size (bits): 32 Sign: U	Unit: Hours Lower Limit: 0.000 Hours Upper Limit: 1193046.000 Hours Default: 0	Total online time for Gen3	System Information
42710	Gen4 Online Time	Read Only	Multiplier: 0.000277778 Offset: 0 Size (bits): 32 Sign: U	Unit: Hours Lower Limit: 0.000 Hours Upper Limit: 1193046.000 Hours Default: 0	Total online time for Gen4	System Information
42717	Total Number of Gensets Online	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Indicates how many of the defined Gen1 thru Gen4 generator sets are online	System Information
42718	Total Spare Online Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Difference between online capacity (4 generator sets) and Genset Bus Total kW	System Information
42719	Next Gen Restart Threshold	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Indicates kW threshold for gen bus at which the next generator set will restart	Load Demand Control
42720	Next Gen Shutdown Threshold	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Indicates kW threshold for gen bus at which the next generator set will load demand stop	Load Demand Control
42727	Genset Bus kW Overload Threshold	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: Upper Limit: Default:	Calculated kW overload threshold based on online capacity and % setting	System Information
42732	Modbus Bus Message Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Modbus bus message count	Communications

Addr.	System Name	Access	Specifications		Description	Function
42733	Modbus CRC Error Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Modbus CRC error count	Communications
42734	Modbus Exception Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Modbus exception count	Communications
42735	Modbus No Response Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Modbus no response count	Communications
42736	Modbus Slave Message Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Lower Limit: Upper Limit: Default:	Modbus slave message count	Communications
42739	Clock Year	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: year Lower Limit: .000 year Upper Limit: 99.000 year Default:	Use to set or read current year	Real Time Clock
42740	Clock Month	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: month Lower Limit: 1.000 month Upper Limit: 12.000 month Default:	Use to set or read current month	Real Time Clock
42741	Clock Date	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: date Lower Limit: 1.000 date Upper Limit: 31.000 date Default:	Use to set or read current date	Real Time Clock
42742	Clock Hour	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: hour Lower Limit: .000 hour Upper Limit: 23.000 hour Default:	Use to set or read current hour	Real Time Clock
42743	Clock Minute	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: minute Lower Limit: .000 minute Upper Limit: 59.000 minute Default:	Use to set or read current minute	Real Time Clock

Addr.	System Name	Access	Specifications		Description	Function
42744	Clock Second	Read/ Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 8 Sign: U	Unit: seconds Lower Limit: .000 seconds Upper Limit: 59.000 seconds Default:	Use to set or read current se- conds	Real Time Clock
42746	Start Timer	Read Only	Multiplier: 0.100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown timer value for genera- tor set start timer	PTC Operat- ing Mode
42747	Stop Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: Upper Limit: Default:	Countdown timer value for genera- tor set stop timer	PTC Operat- ing Mode
42748	Low Battery Voltage Thre- shold	Read Only	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: Upper Limit: Default:	Battery voltage with respect to the set low bat- tery threshold	Battery Volt- age Protec- tion
42749	High Battery Voltage Thre- shold	Read Only	Multiplier: 0.010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: Upper Limit: Default:	Battery voltage with respect to set high battery threshold	Battery Volt- age Protec- tion

6 DMC 1000 Modbus Enumerated Data

Addr.	System Name	Access	Specifications		Description	Function
42004	Save Adjustments	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Save Trims Default: Do Nothing	Use to save adjustments directly in non-volatile memory	Controller Information
42011	Genset Run Sequence State	Read Only	Size (bits): 8 Number of Fields: 4	0: Time Delay Start 1: Time Delay Stop 2: Stop 3: Run Default:	Indicates state of the generator set run sequence	PTC Operating Mode
42017	Genset Bus Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Unavailable 1: Dead 2: Live Default:	Energization status of the generator set bus	PTC Sensors
42117	Utility Bus Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Unavailable 1: Dead 2: Live Default:	Energization status of the utility bus	PTC Sensors
42208	Utility Unload Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Not Unloaded 2: Unloaded Default:	Indicates utility unloaded status	Master Load Control
42209	Genset Unload Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Not Unloaded 2: Unloaded Default:	Indicates generator set unloaded status	Master Load Control
42210	System State	Read / Write	Size (bits): 8 Number of Fields: 18	0: Not Available 1: TD Start 2: TD Stop 3: TD Programmed Transition 4: TD Transfer 5: TD Retranfer 6: Synchronizing 7: Sync Check OK 8: Inhibit 9: Unassigned 10: Ramp Unload 11: Ramp Load 12: Manual 13: Utility Failure 14: Test 15: Standby 16: Factory Test 17: Extended Parallel Default: Not Available	Indicates what state the control is currently in	System Information

Addr.	System Name	Access	Specifications		Description	Function
42211	PTC Operating Mode	Read Only	Size (bits): 8 Number of Fields: 6	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default:	Indicates the current PTC operating mode. Read/Write in Comp mode	PTC Operating Mode
42216	Genset Availability Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Available 2: Unknown Default:	Indicates availability of generator set for loading as determined by generator set sensors	Availability
42217	Utility Availability Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Available 2: Unknown Default:	Indicates availability of utility for loading as determined by utility sensors	Availability
42218	Gen CB Position Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default:	Generator set breaker position	Breaker Control
42219	Util CB Position Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default:	Utility breaker position	Breaker Control
42224	PTC State	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Enabled 1: No Source Connected 2: Utility Connected 3: Genset Connected 4: Paralleled Default:	Indicates the connected state of the power transfer control Read/Write in Comp.	PTC State Machine
42225	Sync Check Close Allowed	Read Only	Size (bits): 8 Number of Fields: 2	0: Not Allowed 1: Allowed Default:	Indicates whether any sync check conditions for have been met	Master Sync Control
42227	Synchronizer Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Synchronizer Off 1: Synchronizer On Default:	Indicates state of the synchronizer	Master Sync Control
42228	System Lock-out Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	Faults have occurred which prevent normal system operation; reset faults	System Information

Addr.	System Name	Access	Specifications		Description	Function
42229	Breaker 1 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 1	Load Add Shed Control
42230	Breaker 2 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 2	Load Add Shed Control
42231	Breaker 3 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 3	Load Add Shed Control
42232	Breaker 4 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 4	Load Add Shed Control
42233	Breaker 5 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 5	Load Add Shed Control
42234	Breaker 6 Position	Read Only	Size (bits): 8 Number of Fields: 3	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 6	Load Add Shed Control
42235	Breaker 1 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 1	Load Add Shed Control
42236	Breaker 2 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 2	Load Add Shed Control
42237	Breaker 3 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 3	Load Add Shed Control
42238	Breaker 4 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 4	Load Add Shed Control
42239	Breaker 5 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 5	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42240	Breaker 6 Trip Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 6	Load Add Shed Control
42241	ATS 1 Position	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 1	Load Add Shed Control
42242	ATS 2 Position	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 3	Load Add Shed Control
42243	ATS 3 Position	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 3	Load Add Shed Control
42244	ATS 4 Position	Read Only	Size (bits):8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 4	Load Add Shed Control
42245	ATS 5 Position	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 5	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42246	ATS 6 Position	Read Only	Size (bits): 8 Number of Fields: 5	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 6	Load Add Shed Control
42248	PCCNet Communications Status	Read Only	Size (bits): 8 Number of Fields: 3	0: Failed 1: Good 2: Wait Default: Wait	Indicates status of PCCNet	Communications
42249	Expansion Board Communications	Read Only	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Indicates the status of the SID to expansion board connection	Communications
42252	Add Level 1 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 1	Load Add Shed Control
42253	Add Level 2 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 2	Load Add Shed Control
42254	Add Level 3 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 3	Load Add Shed Control
42255	Add Level 4 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 4	Load Add Shed Control
42256	Add Level 5 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 5	Load Add Shed Control
42257	Add Level 6 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 6	Load Add Shed Control
42258	Shed Level 1 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 1	Load Add Shed Control
42259	Shed Level 2 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 2	Load Add Shed Control
42260	Shed Level 3 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 3	Load Add Shed Control
42261	Shed Level 4 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 4	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42262	Shed Level 5 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 5	Load Add Shed Control
42263	Manual add Level 1 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 1	Load Add Shed Control
42264	Manual add Level 2 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 2	Load Add Shed Control
42265	Manual add Level 3 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 3	Load Add Shed Control
42266	Manual add Level 4 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 4	Load Add Shed Control
42267	Manual add Level 5 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 5	Load Add Shed Control
42268	Manual add Level 6 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add loads assigned to level 6	Load Add Shed Control
42269	Manual Shed Level 1	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 1	Load Add Shed Control
42270	Manual Shed Level 2	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 2	Load Add Shed Control
42271	Manual Shed Level 3	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 3	Load Add Shed Control
42272	Manual Shed Level 4	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 4	Load Add Shed Control
42273	Manual Shed Level 5	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 5	Load Add Shed Control
42274	Restore Shed Level 1 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Restore Level Default: Do Nothing	Indicates if shed level 1 has been restored	Load Add Shed Control
42275	Restore Shed Level 2 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Restore Level Default: Do Nothing	Indicates if shed level 2 has been restored	Load Add Shed Control
42276	Restore Shed Level 3 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Restore Level Default: Do Nothing	Indicates if shed level 3 has been restored	Load Add Shed Control
42277	Restore Shed Level 4 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Restore Level Default: Do Nothing	Indicates if shed level 4 has been restored	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42278	Restore Shed Level 5 Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Restore Level Default: Do Nothing	Indicates if shed level 5 has been restored	Load Add Shed Control
42279	Add Load 1 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 1	Load Add Shed Control
42280	Add Load 2 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 2	Load Add Shed Control
42281	Add Load 3 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 3	Load Add Shed Control
42282	Add Load 4 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 4	Load Add Shed Control
42283	Add Load 5 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 5	Load Add Shed Control
42284	Add Load 6 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Add Load Default: Do Nothing	Indicates add command for load 6	Load Add Shed Control
42285	Shed Load 1 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 1	Load Add Shed Control
42286	Shed Load 2 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 2	Load Add Shed Control
42287	Shed Load 3 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 3	Load Add Shed Control
42288	Shed Load 4 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 4	Load Add Shed Control
42289	Shed Load 5 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 5	Load Add Shed Control
42290	Shed Load 6 Command	Read Only	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 6	Load Add Shed Control
42296	PTC Genset Operating Mode	Read Only	Size (bits): 8 Number of Fields: 6	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default:	Indicates the current operating mode of the generator sets	PTC Operating Mode

Addr.	System Name	Access	Specifications		Description	Function
42297	PTC Transfer Pair Operating Mode	Read Only	Size (bits):8 Number of Fields: 6	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default:	Indicates the current operating mode of the transfer pair	PTC Operating Mode
42298	PTC Operating Transition Type	Read Only	Size (bits): 8 Number of Fields: 3	0: Open Transition 1: Hard Closed Transition 2: Soft Closed Transition Default:	Indicates the transition type currently applicable to the PTC function operation	PTC Operating Mode
42300	System Topology	Read / Write	Size (bits): 8 Number of Fields: 6	0: Master Synchronize Only 1: Isolated Bus w/out GM 2: Isolated Bus w/GM 3: Common Bus 4: Transfer Pair 5: Component Mode Default: Master Synchronize Only	Main setting: Sets system topology; control must be in manual to set	Application Configuration
42301	Transition Type	Read / Write	Size (bits):8 Number of Fields: 3	0: Open Transition 1: Hard Closed Transition 2: Soft Closed Transition Default: Open Transition	Sets the type of transition that will be used	Application Configuration
42302	Extended Parallel Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable extended parallel operation	Application Configuration
42303	Load Demand Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Fixed Sequence 2: Run Hours Default: None	Sets load demand type	Load Demand Control
42304	Priority Control Method	Read / Write	Size (bits): 8 Number of Fields: 2	0: Manual 1: Automatic Default: Manual	Sets priority control method	Priority Control
42326	Test With Load Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable load transfer during a test	Application Configuration

Addr.	System Name	Access	Specifications		Description	Function
42328	Genset Bus kW Setpoint Source	Read / Write	Size (bits):8 Number of Fields: 2	0: Internal 1: Analog Input Default: Internal	selects where the generator set kW setpoint will come from for extended paralleling	Master Load Control
42329	Genset Bus kVAR Setpoint Source	Read / Write	Size (bits):8 Number of Fields: 2	0: Internal 1: Analog Input Default: Internal	Selects where the generator set kVAR setpoint will come from extended paralleling	Master Load Control
42335	Utility Bus kW Setpoint Source	Read / Write	Size (bits):8 Number of Fields: 2	0: Internal 1: Analog Input Default: Internal	Selects where the utility kW setpoint will come from for extended paralleling	Master Load Control
42336	Utility Bus kVAR Setpoint Source	Read / Write	Size (bits):8 Number of Fields: 2	0: Internal 1: Analog Input Default: Internal	Selects where the utility kVAR setpoint will come from extended paralleling	Master Load Control
42342	Clear Fault History Table	Read / Write	Size (bits):8 Number of Fields: 2	0: Inactive 1: Active Default: Inactive	Use to completely clear the fault history table	Fault and Event Info
42343	Clear Occurrence Table	Read / Write	Size (bits):8 Number of Fields: 2	0: Inactive 1: Active Default: Inactive	Use to completely clear the counts in faults and events occurrence tables	Fault and Event Info
42344	Genset Reset All Energy Meters	Read / Write	Size (bits):8 Number of Fields: 2	0: Do Nothing 1: Clear Counters Default: Do Nothing	Use to permanently clear all generator set energy meter values	Energy
42345	Utility Reset All Energy Meters	Read / Write	Size (bits):8 Number of Fields: 2	0: Do Nothing 1: Clear Counters Default: Do Nothing	Use to permanently clear all utility energy meter values	Energy
42346	Extended Paralleling kW Load Control Type	Read / Write	Size (bits):8 Number of Fields: 4	0: Genset % Level (Open Loop) 1: Genset Bus kW (Closed Loop) 2: Genset Bus kW w/ Utility (open Loop) 3: Utility Bus kW (Closed Loop) Default: Genset Bus % Level (Open Loop)	Sets how and where the kW will be controlled for extended parallel operation	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42347	Extended Paralleling kVAR Load Control Type	Read / Write	Size (bits):8 Number of Fields: 7	0: Genset Controllers 1: Genset Bus % Level (Open Loop) 2: Genset Bus Power Factor 3: Genset Bus kVAR (Closed Loop) 4: Genset Bus Power Factor (Closed Loop) 5: Utility Bus kVAR (Closed Loop) 6: Utility Bus Power Factor (Closed Loop) Default: Genset Controllers	Sets how and where the kVAR will be controlled for extended parallel operation	Master Load Control
42349	Fail To Sync Lockout Enable	Read / Write	Size (bits):8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Enable if want synchronizing to stop if fail to sync occurs	Master Sync Control
42350	Fail to Sync Open Transition Retransfer Enable	Read / Write	Size (bits):16 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable an open transition retransfer upon a fail to sync	PTC State Machine
42352	Gen CB Manual Control	Read / Write	Size (bits):8 Number of Fields: 3	0: Closed Requested 1: No Command 2: Open Command Default: No Command	In manual mode, can be used to semi-manually control the generator set breaker	Breaker Control
42353	Util CB Manual Control	Read / Write	Size (bits):8 Number of Fields: 3	0: Closed Requested 1: No Command 2: Open Command Default: No Command	In manual mode, can be used to semi-manually control the utility breaker	Breaker Control
42357	Synchronizer Polarity	Read / Write	Size (bits):8 Number of Fields: 2	0: Normal 1: Invert Default: Normal	Use to invert synchronizer polarity	Master Sync Control
42358	Synchronize Method	Read / Write	Size (bits):8 Number of Fields: 2	0: Phase Match 1: Slip Frequency Default: Phase Match	Sets the synchronizing method	Master Sync Control
42359	Port Protocol Selection	Read / Write	Size (bits): 8 Number of Fields: 2	0: PCCNet 1: MON Default: PCCNet	Allows protocol CT the PCCNet port to be changed to MON for troubleshooting	Communications
42360	System Scheduler Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable the system scheduler	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42361	Load Add Shed Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable the load add shed feature	Load Add Shed Control
42362	Open Transition Retransfer Load Shed Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable the shedding of loads during open transition retransfer	Load Add Shed Control
42363	Auto/Manual Load Add Restore Mode	Read / Write	Size (bits): 8 Number of Fields: 2	0: Auto 1: Manual Default: Auto	Indicates automatic or manual load add restore operation	Load Add Shed Control
42367	Load 1 Device Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connection to load 1 add shed control and status I/O	Load Add Shed Control
42368	Load 2 Device Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connection to load 2 add shed control and status I/O	Load Add Shed Control
42369	Load 3 Device Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connection to load 3 add shed control and status I/O	Load Add Shed Control
42370	Load 4 Device Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connection to load 4 add shed control and status I/O	Load Add Shed Control
42371	Load 5 Device Type	Read / Write	Size (bits): 8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connection to load 5 add shed control and status I/O	Load Add Shed Control
42372	Load 6 Device Type	Read / Write	Size (bits):8 Number of Fields: 3	0: None 1: Breaker 2: ATS Default: None	Indicates type of load connected to load 6 add shed control and status I/O	Load Add Shed Control
42385	Genset Bus Overload Method	Read / Write	Size (bits):8 Number of Fields: 3	0: Both kW and Frequency 1: kW Only 2: Frequency Only Default: Both kW and Frequency	Use to choose method for determining generator bus overload condition	System Information

Addr.	System Name	Access	Specifications		Description	Function
42390	Load Demand Enable	Read / Write	Size (bits):8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Use to enable or disable the load demand feature	Load Demand Control
42391	Load Demand GenA	Read / Write	Size (bits): 8 Number of Fields: 4	0: Gen1 1: Gen2 2: Gen3 3: Gen4 Default: Gen1	Sets GenA for fixed sequence load demand	Load Demand Control
42392	Load Demand GenB	Read / Write	Size (bits):8 Number of Fields: 4	0: Gen1 1: Gen2 2: Gen3 3: Gen4 Default: Gen2	Sets GenB for fixed sequence load demand	Load Demand Control
42393	Load Demand GenC	Read / Write	Size (bits):8 Number of Fields: 4	0: Gen1 1: Gen2 2: Gen3 3: Gen4 Default: Gen3	Sets GenC for fixed sequence load demand	Load Demand Control
42394	Load Demand GenD	Read / Write	Size (bits):8 Number of Fields: 4	0: Gen1 1: Gen2 2: Gen3 3: Gen4 Default: Gen4	Sets GenD (first to stop) for fixed sequence load demand	Load Demand Control
42413	System Phase Rotation	Read / Write	Size (bits):8 Number of Fields: 2	0: L1-L2-L3 1:L1-L3-L2 Default: L1-L2-L3	Defines what the system phase rotation sequence is	System Information
42419	Scheduler Program x Enable	Read / Write	Size (bits):8 Number of Fields: 2	0: Disable 1: Enable Default: Disable	Use to enable or disable the selected program	System Scheduler
42420	Scheduler Program x Repeat Interval	Read / Write	Size (bits):8 Number of Fields: 11	0: Once 1: Every Week 2: Every 2 Weeks 3: Every 3 Weeks 4: Every 4 Weeks 5: Every 5 Weeks 6: First Week of Month 7: Second Week of Month 8: Third Week of month 9: Forth Week of the Month 10: Last Week of the Month Default: Once	Use to adjust repeat interval for the selected program	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42421	Scheduler Program x Run Mode	Read / Write	Size (bits): 8 Number of Fields: 3	0: No Load 1: With Load 2: Extended Parallel Default: No Load	Use to adjust run mode for the selected program	System Scheduler
42422	Scheduler Program x Start Day	Read / Write	Size (bits): 8 Number of Fields: 7	0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday Default: Sunday	Use to adjust start day of week for the selected program	System Scheduler
42428	Scheduler Exception x Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disable 1: Enable Default: Disable	Use to enable or disable the selected exception	System Scheduler
42429	Scheduler Exception x Repeat	Read / Write	Size (bits): 8 Number of Fields: 2	0: Once Only 1: Every Year Default: Once Only	Use to adjust the repeat setting of the selected exception	System Scheduler
42437	Daylight Saving Time Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disabled 1: Enabled Default: Disabled	Enables the daylight savings time feature	Real Time Clock
42438	Load Demand Refresh Sequence Command	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Refresh Sequence Default: Do Nothing	Use to force a refresh of the active load demand sequence	Load Demand Control
42439	Genset Connection Type	Read / Write	Size (bits): 8 Number of Fields: 2	0: Wye 1: Delta Default: Wye	Delta or Wye for generator set connection	AC Setup
42443	Genset CT Secondary Current	Read / Write	Size (bits): 8 Number of Fields: 2	0: 1 Amp 1: 5 Amp Default: 5 Amp	Generator set CT secondary current	AC Setup
42444	Utility Connection Type	Read / Write	Size (bits): 8 Number of Fields: 2	0: Wye 1: Delta Default: Wye	Delta or Wye for utility connection	AC Setup
42448	Utility CT Secondary Current	Read / Write	Size (bits): 8 Number of Fields: 2	0: 1 Amp 1: 5 Amp Default: 5 Amp	Utility CT secondary current	AC Setup
42454	Nominal Battery Voltage	Read / Write	Size (bits): 8 Number of Fields: 2	0: 12V 1: 24V Default: 24V	DC voltage provided to the control	Battery Voltage Protection
42461	Genset Online Capacity Sensor Enable	Read / Write	Size (bits): 8 Number of Fields: 2	0: Disable 1: Enable Default: Disable	Use to enable or disable the generator set online capacity sensor	PTC Sensors

Addr.	System Name	Access	Specifications		Description	Function
42472	Gen Bus Base Load Status	Read Only	Size (bits):8 Number of Fields: 2	0: Inactive 1: Active Default:	Indicates that the generator bus is on base load extended paralleling	System Information
42473	Util Bus Peak Shave Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	Indicates that the utility bus is on peak shave extended paralleling	System Information
42600	Extended Parallel Start Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Stop 1: Start Default: Stop	State of extended parallel start volatile input	Discrete Inputs
42601	Synchronizer Enable Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: inactive 1: Active Default: inactive	State of synchronizer enable volatile input	Discrete Inputs
42602	Utility Source Failure Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: inactive 1: Active Default: inactive	State of utility source failure volatile input	Discrete Inputs
42603	Transfer Inhibit Vol	Read / Write	Size (bits):16 Number of Fields: 2	0: No Inhibit 1: Inhibit Default: No Inhibit	State of transfer inhibit volatile input	Discrete Inputs
42604	Retranfer Inhibit Vol	Read / Write	Size (bits):8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default: No Inhibit	State of retransfer inhibit volatile input	Discrete Inputs
42605	Gen CB Inhibit Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default: No Inhibit	State of generator CB inhibit volatile input	Discrete Inputs
42606	Util CB Inhibit Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default: No Inhibit	State of utility CB inhibit volatile input	Discrete Inputs
42607	Auto/Manual Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Auto 1: Manual Default: Auto	State of auto/manual volatile input	Discrete Inputs
42608	Test Start Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Stop 1: Start Default: Stop	State of test start volatile input	Discrete Inputs
42609	Fault Reset Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Not Reset 1: Reset Default: Not Reset	State of fault reset volatile input	Discrete Inputs
42610	Override Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: No Override 1: Override Default: No Override	State of override volatile input	Discrete Inputs
42611	Extended Parallel Start Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Start 1: Stop Default:	State of extended parallel start input	Discrete Inputs

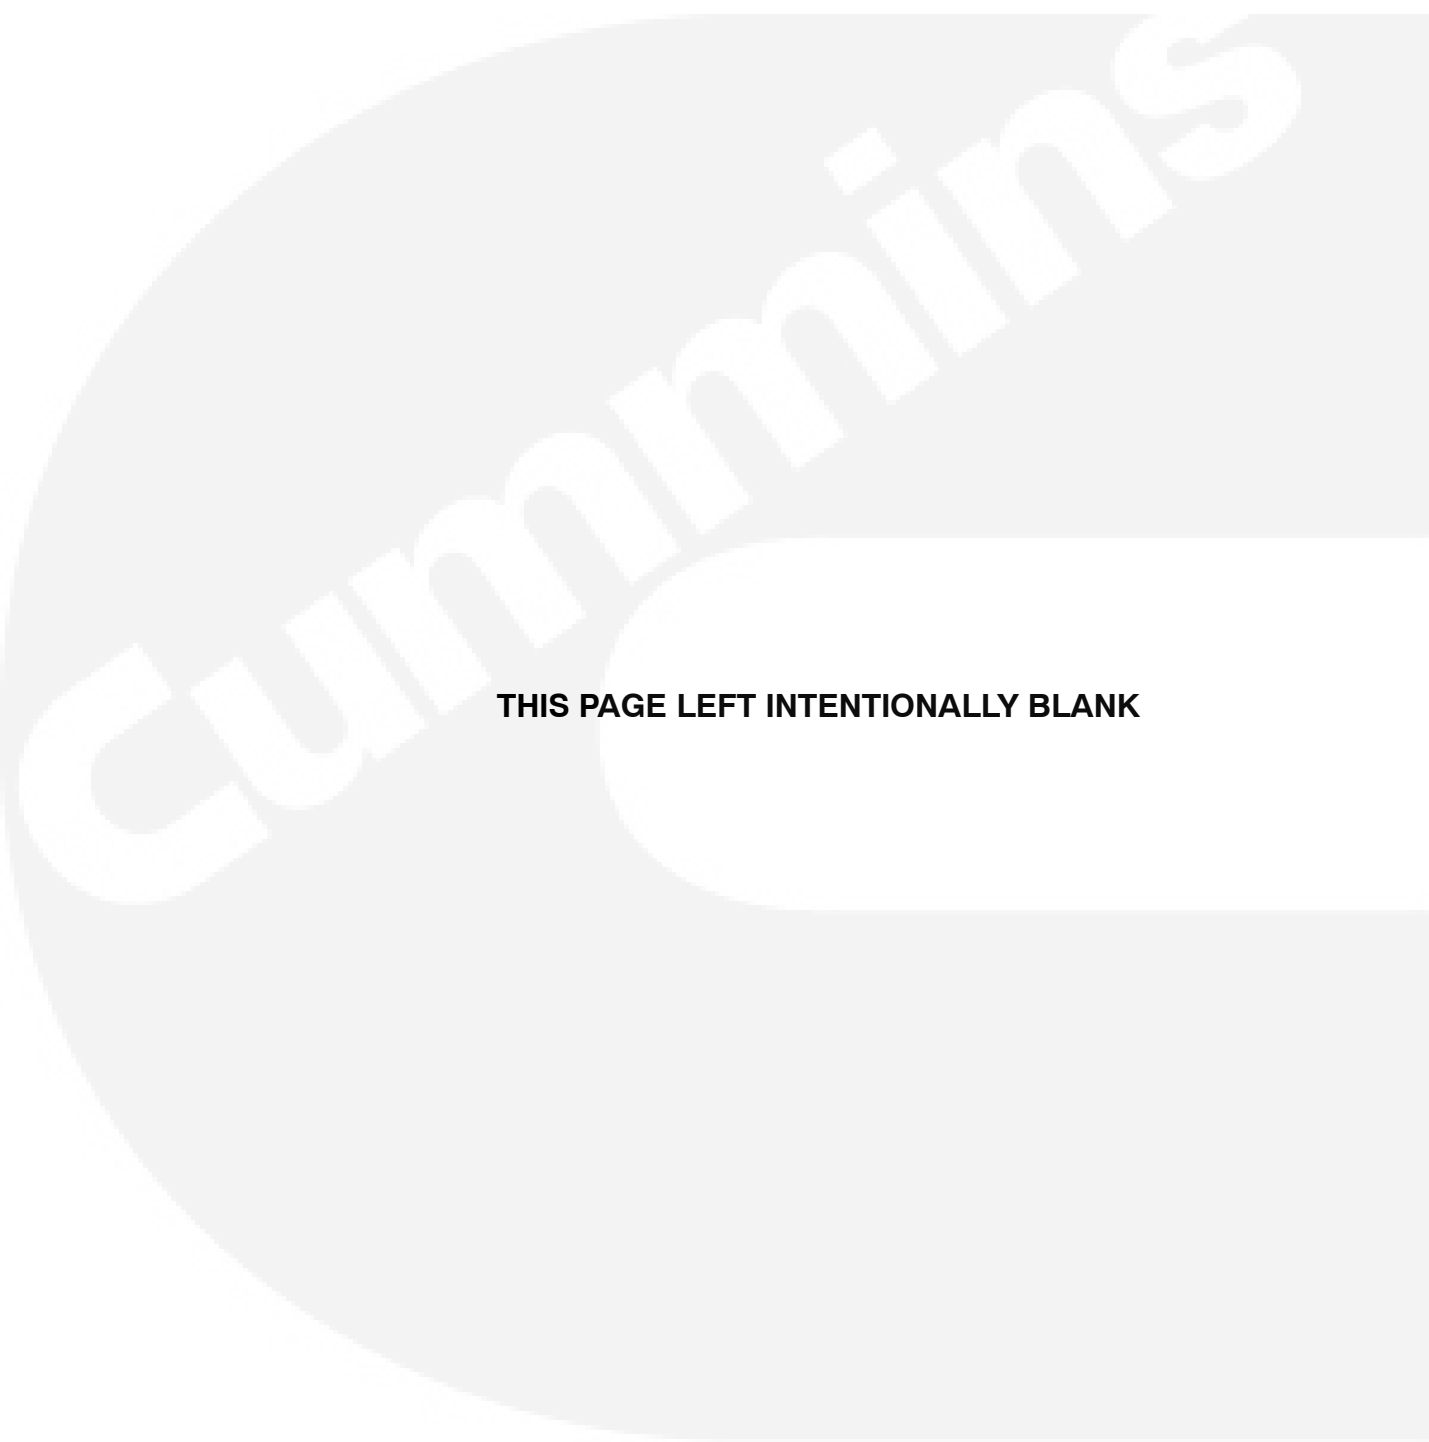

Addr.	System Name	Access	Specifications		Description	Function
42612	Synchronizer Enable Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	State of synchronizer enable input	Discrete Inputs
42613	Utility Source Failure Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	State of utility source failure input	Discrete Inputs
42614	Transfer Inhibit Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default:	State of transfer inhibit input	Discrete Inputs
42615	Retransfer Inhibit Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default:	State of retransfer inhibit input	Discrete Inputs
42616	Gen CB Inhibit Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default:	State of generator CB inhibit input	Discrete Inputs
42617	Util CB Inhibit Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default:	State of utility CB inhibit input	Discrete Inputs
42618	Auto/Manual Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Auto 1: Manual Default:	State of auto/manual input	Discrete Inputs
42619	Test Start Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Stop 1: Start Default:	State of test start input	Discrete Inputs
42620	Fault Reset Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Reset 1: Reset Default:	State of fault reset input	Discrete Inputs
42621	Override Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: No Override 1: Override Default:	State of override input	Discrete Inputs
42622	Master Inhibit	Read Only	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default:	Indicates state of master priority inhibit	Priority Control
42623	Gen CB Tripped Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	State of generator CB tripped input	Discrete Inputs
42624	Gen CB Tripped Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default: Inactive	State of generator CB tripped volatile input	Discrete Inputs
42625	Util CB Tripped Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Inactive 1: Active Default:	State of utility CB tripped input	Discrete Inputs
42626	Util Cb Tripped Vol	Read / Write	Size (bits): 8 Number of Fields: 4	0: Inactive 1: Active Default: Inactive	State of utility CB tripped volatile input	Discrete Inputs
42627	Genset Phase Rotation	Read Only	Size (bits): 8 Number of Fields: 2	0: L1-L2-L3 1: L1-L3-L2 Default:	Generator set phase rotation	Phase

Addr.	System Name	Access	Specifications		Description	Function
42628	Utility Phase Rotation	Read Only	Size (bits): 8 Number of Fields: 2	0: L1-L2-L3 1: L1-L3-L2 Default:	Utility phase rotation	Phase
42629	Gen1 CB Position Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default:	State of Gen1 CB position input	Discrete Inputs
42630	Gen1 CB Position Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen1 CB position volatile input	Discrete Inputs
42631	Gen2 CB Position Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default:	State of Gen2 CB position input	Discrete Inputs
42632	Gen2 CB Position Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen2 CB position volatile input	Discrete Inputs
42633	Gen3 CB Position Sw	Read Only	Size (bits): 16 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default:	State of Gen3 CB position input	Discrete Inputs
42634	Gen3 CB Position Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen3 CB position volatile input	Discrete Inputs
42635	Gen4 CB Position Sw	Read Only	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default:	State of Gen4 CB position input	Discrete Inputs
42636	Gen4 CB Position Vol	Read / Write	Size (bits): 8 Number of Fields: 2	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen4 CB position volatile input	Discrete Inputs
42637	Network Master Inhibit	Read / Write	Size (bits): 8 Number of Fields: 2	0: No Inhibit 1: Inhibit Default: No Inhibit	Use to manually inhibit the module	Priority Control
42700	Gen1 Availability State	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:	For load demand use – Indicates status of Gen1	Load Demand Control
42701	Gen2 Availability State	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:	For load demand use – Indicates status of Gen2	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42702	Gen3 Availability State	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:	For load demand use – Indicates status of Gen3	Load Demand Control
42703	Gen4 Availability State	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:	For load demand use – Indicates status of Gen4	Load Demand Control
42712	GenA	Read Only	Size (bits): 8 Number of Fields: 4	0: Gen1 1: Gen2 2: Gen3 3: Gen4 Default:	Indicates which generator set is currently GenA for load demand	Load Demand Control
42713	GenB	Read Only	Size (bits): 8 Number of Fields: 4	0: Gen1 1: Gen2 1: Gen3 1: Gen4 Default:	Indicates which generator set is currently GenB for load demand	Load Demand Control
42714	GenC	Read Only	Size (bits): 8 Number of Fields: 4	0: Gen1 1: Gen2 1: Gen3 1: Gen4 Default:	Indicates which generator set is currently GenC for load demand	Load Demand Control
42715	GenD	Read Only	Size (bits): 8 Number of Fields: 4	0: Gen1 1: Gen2 1: Gen3 1: Gen4 Default:	Indicates which generator set is currently GenD (first to stop) for load demand	Load Demand Control
42716	Load Demand State	Read Only	Size (bits): 8 Number of Fields: 3	0: Off 1: Initial Delay Timing 2: Load Monitor Default:	Indicates operating state of the load demand control	Load Demand Control
42721	Next Gen To Restart	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: None Default:	Indicates which generator set is next to be re-started if load conditions are met	Load Demand Control
42722	Next Gen To Shutdown	Read Only	Size (bits): 8 Number of Fields: 5	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: None Default:	Indicates which generator set is next to be stopped if load conditions are met	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42723	Load Demand Gen1 Driver Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen1 driver output	Discrete Outputs
42724	Load Demand Gen2 Driver Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen2 driver output	Discrete Outputs
42725	Load Demand Gen3 Driver Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen3 driver output	Discrete Outputs
42726	Load Demand Gen4 Driver Status	Read Only	Size (bits): 8 Number of Fields: 2	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen4 driver output	Discrete Outputs
42728	Genset Bus kW Overload Status	Read Only	Size (bits): 8 Number of Fields: 2	0: No Overload 1: Overload Default:	Indicates whether generator bus is overloaded based on kW	System Information
42729	Genset Bus Underfrequency Overload Status	Read Only	Size (bits): 8 Number of Fields: 2	0: No Overload 1: Overload Default:	Indicates whether generator bus is overloaded based on frequency	System Information
42730	Active Schedule	Read Only	Size (bits): 8 Number of Fields: 19	0: None 1: Program 1 2: Program 2 3: Program 3 4: Program 4 5: Program 5 6: Program 6 7: Program 7 8: Program 8 9: Program 9 10: Program 10 11: Program 11 12: Program 12 13: Exception 1 14: Exception 2 15: Exception 3 16: Exception 4 17: Exception 5 18: Exception 6 Default:	Indicates the currently active scheduler program or exception	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42731	Scheduler Run Command	Read Only	Size (bits): 8 Number of Fields: 4	0: Off 1: No Load 2: With Load 3: Extended Parallel Default:	Indicates current run command coming from the scheduler function	System Scheduler
42737	Modbus Clear Counters	Read / Write	Size (bits): 8 Number of Fields: 2	0: Do Nothing 1: Clear Counters Default: Do Nothing	Clears all the Modbus counters	Communications
42738	Clock Mode	Read / Write	Size (bits): 8 Number of Fields: 3	0: Normal 1: Set Clock 2: Save Clock Default: Normal	Use to set clock and save setting	Real Time Clock
42745	Clock Day	Read Only	Size (bits): 8 Number of Fields: 7	0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday Default:	Indicates day of week for current date	Real Time Clock

7 DMC 1000 Modbus Bitmap Data

Note: Earlier versions of software may not support all of the Modbus registers in the following table. If a particular register is not available in your installation, it is possible that the Modbus connection is working but the controller software does not support that particular register.

Note: If an address or bit is not listed in this table, it is not used.

Addr.	Bit#	System Name	Fault Code	Event Name	Response
42500	0	Fault Status Bit-map 1	1455	Utility Main Breaker Position Contact Warning	Warning

9. DMC 1500 Communication Server 2

Modbus Address: 1 (Slave).

Note: If an address or bit is not listed in this table, it is not used.

Note: The external device can read 1–40 contiguous registers, write 1–40 contiguous registers, or read diagnostic counters.

10. MCM3320 Modbus Register Map

Modbus Communications

This section defines the Modbus communications interface. Serial communications use an RTU (Remote Terminal Unit) two-wire RS-485, master/slave multi-drop network configuration described in the Modbus Protocol Reference Guide. The controller is defined as a slave.

Reference Documents

1. Modicon “Modbus Protocol Reference Guide PI-MBUS-300 Rev. G” describes the serial transmission modes.
2. “Modbus Over Serial Line Specification and Implementation Guide v1.0” describes the lower levels of modbus protocol.
3. “Modbus Application Protocol Specification v1.1a” describes the application layer of the modbus protocol.

Serial Port Configuration

The port communications occur, by default, at a baud rate of 19200 using eight data bits, one stop-bit with even parity, and are configurable via MON and PCCnet logically.

Device Addresses

The PLC is the master device in the modbus network. The modbus node address is configurable and is set to node 1 by default.

Power-Up Time

The MCM3320 is capable of supporting communication transactions within 10 seconds following initial power-up.

Response Time

The controller responds within 100 ms of a request for information the master.

Data Formatting

The format for each register is defined in the modbus register table.

All data parameters are transmitted as registers. All registers are two 8 bit bytes in length (16 bits per register). If a register requires more than 16 bits, then, the subsequent registers are also used. Therefore, with a 32 bit register X and X+1, the X register contains the upper 16 bits of data and the X+1 register contains the lower 16 bits. A register with 1 bit of data uses the least significant bit of a 16 bit register.

For all discrete data referenced a by bit number, the least significant bit for the register is numbered as “0” and the most significant bit as “15”. For all fault status and event status, a “1” indicates the fault or event is active and a “0” indicates inactive.

Modbus Activity LED

The modbus activity LED is on when either the control is receiving a modbus packet or sending a modbus packet. It is also on when a protocol timer is in timer mode. This precedes a protocol switch on the SC11 port. Otherwise, the LED is off.

Supported Functions

The controller is only capable of processing the following modbus data and control function queries from the master:

- Read holding registers (Function Code 03)
- Preset single register (Function Code 06)
- Diagnostics (Function Code 08)
- Preset multiple registers (Function Code 16)

The control responds to any query containing a function code, other than codes 03, 06, 08 and 16 #by sending an exception response with the exception code set to “01” (Illegal Function).

The control responds to any read of a single address that is not specified in this specification by sending an exception response with the exception code set to “02” (Illegal Address).

The control responds to any read of a block of 2 or more addresses containing an address that is not specified in this specification by returning data of 0xFF for that address.

The control responds to Preset Single Register and Preset

Multiple Register functions when the data is out of bounds by sending an exception response with the exception code set to "03" (Illegal Data Value).

Holding Register Function

The control provides the ability to read all read only and read/write registers in the Modbus Registers Table via the Holding Register function. From 1 to 40 contiguous registers can be read at a time. If an attempt is made to read a register that's not available, then an error is returned and none of the data will be returned.

Preset Single/Preset Multiple Registers Function

The control provides the ability to write to (preset) Read/Write registers in the modbus registers table via both the present single register (Function Code 06) and the preset multiple registers (Function Code 16). A write to a single register can be performed by the master using the modbus data and control function query preset single register (Function Code 06). For writes requiring writes to 1 to 40 contiguous registers, the master uses the modbus data and control function query called preset multiple registers (Function Code 16). If a write attempt is made and any of the data is invalid or if an attempt is made to write to a register that's not available, then an error is returned and none of the data will be written.

Diagnostic Counters

The following diagnostic counters is also available via the modbus diagnostic function (Function Code 08). The following parameters are updated and available via MON and modbus logical access. A single logical is also available to clear all counters.

- Bus Message Count – Total Modbus packets on bus
- CRC Errors Count – Total Modbus packets received with a bad CRC
- Exception Count – Total Modbus packets received where an exception was sent back
- No Response Count – Total Modbus packets received where no response sent back
- Slave Message Count – Total Modbus packets on bus addressed to this node

Register Maps

Addresses were assigned to maintain compatibility with the existing Modlon gateway where applicable. The following conventions are followed:

- 40xxx – Genset control registers
- 41xxx – Transfer switch control register
- 42xxx – Master control registers (MCM3320)
- 4x0xx – General data registers (volts, current, etc.) primarily for genset bus
- 4x1xx – General data registers (volts, current, etc.) primarily for utility bus
- 4x2xx – Configuration and status registers – Block 1
- 4x3xx – Settings – Block 1
- 4x4xx – Settings – Block 2
- 4x5xx – Bitmap
- 4x6xx – Switch I/O
- 4x7xx – Configuration and status registers – Block 2

Application Layer

The application layer processes the packet. Four functions are supported: Read Hold Registers, Set Single Register, Modbus Loopback, and Set Multiple Registers. If the request packet specifies an unsupported function, then an illegal function response is returned. See the "Modbus Application Protocol Specification" to see how the request and response packets are formatted and how each function processes the data.

Read Hold Registers

Given a starting address and the quantity of registers desired, this function gets the data, formats it if required, and writes it to the TX buffer. If any register in the range is not supported, then an error is returned.

Set Single Register

Given a register address and data, this function verifies that the data is within range; then if OK, writes the data.

Modbus Loopback

This function performs Modbus diagnostic functionality. Some of the functionality defined here is also

available via MON and PCCnet logicals. See the “Diagnostic Counters” section of this document for details. The Loopback function supports:

0x00 Return Query Data

0x01 Restart

0x04 Force Listen Only Mode

0x0A Clear Counter

0x0B Return Bus Message Count

0x0C Return Bus Communication Error Count (bad CRC)

0x0D Return Bus Exception Error Count

0x0E Return Slave Message Count

0x0F Return Slave No Response Count

Set Multiple Registers

Given a starting address, the quantity of registers, and two bytes of data for each register, this function verifies that all the data is within range; then if OK, writes all data. If any register in the range is not supported or any of the data is out of range then an error is returned and no data is written. A 32-bit parameter is written using “Write Multiple Register” (Command Code 16) only. Using “Write Single Register” (Command Code 06) returns an exception code 2 – Illegal Address. If both registers are not in the same block, the control sends an exception code 2–Illegal Address.

Modbus Register Table

Note: For bitmapped quantities, refer to table in section 8 on page 425. For 32 bit quantities, the register address listed (X) is the high 16 bit. The low 16 bits are at register X+1. If an address or bit is not listed in this table, it is not used.

Addr.	System Name	Access	Specifications		Description	Function

42025	Genset LL Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default	Generator set LL Average voltage	Voltage

Addr.	System Name	Access	Specifications		Description	Function
42026	Genset L1 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Generator set L1 current	Current
42027	Genset L2 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Generator set L2 current	Current
42028	Genset L3 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Generator set L3 current	Current
42029	Genset Average Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Generator set average current	Current
42030	Genset L1 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Generator set L1 kW	Power
42031	Genset L2 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Generator set L2 kW	Power
42032	Genset L3 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Generator set L3 kW	Power
42033	Genset Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Generator set total kW	Power
42034	Genset L1 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Generator set L1 kVAR	Power
42035	Genset L2 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Generator set L2 kVAR	Power

Addr.	System Name	Access	Specifications		Description	Function
42036	Genset L3 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Generator set L3 kVAR	Power
42037	Genset Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Generator set total kVAR	Power
42038	Genset Total Power Factor	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: Upper Limit: Default:	Generator set L1 power factor	Power
42039	Genset L1 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set L1 kVA	Power
42040	Genset L2 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set L2 kVA	Power
42041	Genset L3 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set L3 kVA	Power
42042	Genset Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set total kVA	Power
42043	MB Genset Frequency	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: Hz Upper Limit: Hz Default:	Generator set line frequency scaled by 10 = 1Hz for modbus	Communications
42044	Genset Total Negative kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total negative kWh accumulation	Energy
42046	Genset Total Positive kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total positive kWh accumulation	Energy

Addr.	System Name	Access	Specifications		Description	Function
42048	Genset Total Net kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Generator set total net kWh accumulation	Energy
42050	Genset Total Negative kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total negative kVARh accumulation	Energy
40052	Genset Total Positive kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total positive kVARh accumulation	Energy
42054	Genset Total Net kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total net kVARh accumulation	Energy
42056	Genset Total kVAh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Generator set total kVAh accumulation	Energy
42058	Genset Available Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Calculated amps which represent 100-% generator set bus current – used by bargraph	Current
42059	Genset L1 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L1 current as percent of generator Set total current capacity – used by bargraph	Current
42060	Genset L2 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L2 current as percent of generator Set total current capacity – used by bargraph	Current
42061	Genset L3 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L3 current as percent of generator Set total current capacity – used by bargraph	Current

Addr.	System Name	Access	Specifications		Description	Function
42062	Genset Total kW Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set kW as percent of total generator set capacity – used by bargraph	Power
42063	Genset Frequency Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set frequency as percent of system frequency – used by bargraph	Frequency
42064	Genset L1L2 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L1L2 voltage%	Voltage
42065	Genset L2L3 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L2L3 voltage %	Voltage
42066	Genset L3L1 Voltage%	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Generator set L3L1 voltage%	Voltage
42070	Genset Total kW_32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Generator set total kW in 32 bit	Power
42072	Genset Total kVAR_32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Generator set total kVAR in 32 bit	Power
42074	Genset Total kVA_32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Generator set total kVA in 32 bit	Power
42117	Utility Bus Status	Read Only	0: Unavailable 1: Dead 2: Live Default:		Energization status of the utility bus	PTC Sensors
42118	Utility L1N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L1N voltage	Voltage

Addr.	System Name	Access	Specifications		Description	Function
42119	Utility L2N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L2N voltage	Voltage
42120	Utility L3N Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L3N voltage	Voltage
42121	Utility LN Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility LN average voltage	Voltage
42122	Utility L1L2 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L1L2 voltage	Voltage
42123	Utility L2L3 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L2L3 voltage	Voltage
42124	Utility L3L1 Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility L3L1 voltage	Voltage
42125	Utility LL Average Voltage	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: Volts Upper Limit: Volts Default:	Utility LL average voltage	Voltage
42126	Utility L1 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Utility L1 current	Current
42127	Utility L2 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Utility L2 current	Current
42128	Utility L3 Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Utility L3 current	Current

Addr.	System Name	Access	Specifications		Description	Function
42129	Utility Average Current	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Amps Lower Limit: Amps Upper Limit: Amps Default:	Utility average current	Current
42130	Utility L1 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Utility L1 kW	Power
42131	Utility L2 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Utility L2 kW	Power
42132	Utility L3 kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Utility L3 kW	Power
42133	Utility Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Utility total kW	Power
42134	Utility L1 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Utility L1 kVAR	Power
42135	Utility L2 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Utility L2 kVAR	Power
42136	Utility L3 kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Utility L3 kVAR	Power
42137	Utility Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Utility total kVAR	Power
42138	Utility Total Power Factor	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: Upper Limit: Default:	Utility L1 power factor	Power

Addr.	System Name	Access	Specifications		Description	Function
42139	Utility L1 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Utility L1 kVA	Power
42140	Utility L2 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Utility L2 kVA	Power
42141	Utility L3 kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Utility L3 kVA	Power
42142	Utility Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Utility total kVA	Power
42143	MB Utility Frequency	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: Hz Upper Limit: Hz Default:	Utility line frequency scaled by 10 = 1Hz for modbus	Communications
42144	Utility Total Negative kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Utility total negative kWh accumulation	Energy
42146	Utility Total Positive kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Utility total positive kWh accumulation	Energy
42148	Utility Total Net kWh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kWh Lower Limit: kWh Upper Limit: kWh Default:	Utility total net kWh accumulation	Energy
42150	Utility Total Negative	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Utility total negative kVARh accumulation	Energy
42152	Utility Total Positive kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Utility total positive kVARh accumulation	Energy

Addr.	System Name	Access	Specifications		Description	Function
42154	Utility Total Net kVARh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVARh Lower Limit: kVARh Upper Limit: kVARh Default:	Utility total net kVARh accumulation	Energy
42156	Utility Total kVAh	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVAh Lower Limit: kVAh Upper Limit: kVAh Default:	Utility total kVARh accumulation	Energy
42158	System Total kW	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of generator set bus and utility bus kW	Power
42159	System Total kVAR	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Sum of generator set bus and utility bus kVAR	Power
42160	System Total Power Factor	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: Upper Limit: Default:	System total power factor (totalized value of utility bus plus generator set bus)	Power
42161	System Total kVA	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Sum of generator set bus and utility bus kVA	Power
42162	Utility L1 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L1 current as % of utility total current capacity – used by bargraph	Current
42163	Utility L2 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L2 current as % of utility total current capacity – used by bargraph	Current
42164	Utility L3 Current Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L3 current as as % of utility total current capacity – used by bargraph	Current

Addr.	System Name	Access	Specifications		Description	Function
42165	Utility Total kW Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: % Upper Limit: % Default:	Utility total kW as percent of total utility capacity – used by bargraph	Power
42166	Utility Frequency Percent	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility frequency as percent of system frequency – used by bargraph	Frequency
42167	Utility L1L2 Voltage %	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L1L2 voltage %	Voltage
42168	Utility L2L3 Voltage %	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L2L3 voltage %	Voltage
42169	Utility L3L1 Voltage %	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Utility L3L1 voltage %	Voltage
42170	Utility Total kW _32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Utility total kW	Power
42172	Utility total kVAR _32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Utility total kVAR in 32 bit	Power
42174	Utility total kVA _32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Utility total kVA in 32 bit	Power
42176	System Total kW _32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of generator bus and utility bus kW in 32 bit	Power
42178	System Total kVAR _32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	Sum of generator bus and utility bus kVAR in 32 bit	Power

Addr.	System Name	Access	Specifications		Description	Function
42180	System Total kVA_32 bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: kVA Lower Limit: kVA Upper Limit: kVA Default:	Sum of generator set and utility bus kVA in 32 bit	Power
42200	Total Number of Gensets	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Number of generator sets with non-zero rating entered	System Information
42201	Total System Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of the generator set kW ratings	System Information
42202	Total Online Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of the generator set kW ratings for generator sets which are Online	System Information
42203	Programmed Transition Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown value of the programmed transition timer	PTC Timers
42204	Transfer Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown value of the transfer timer	PTC Timers
42205	Retransfer Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown value of the retransfer timer	PTC Timers
42206	Maximum Parallel Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown value of the maximum parallel timer	PTC Timers
42207	kW Reference	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	kW Control reference value for utility paralleling	Master Load Control
42208	Utility Unloaded Status	Read Only	0: Not Available 1: Not Unloaded 2: Unloaded Default:		Indicates utility unloaded status	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42209	Genset Un-loaded Status	Read Only	0: Not Available 1: Not Unloaded 2: Unloaded Default:		Indicates generator set unloaded status	Master Load Control
42210	System State	Read Only	0: Not Available 1: TD Start 2: TD Stop 3: TD Programmed Transition 4: TD Transfer 5: TD Retransfer 6: Synchronizing 7: Sync Check OK 8: Inhibit 9: Unassigned 10: Ramp Upload 11: Ramp Load 12: Manual 13: Utility Failure 14: Test 15: Standby 16: Factory Test 17: Extended Parallel Default: Not Available		Indicates what state the control is currently IN	System Information
42211	PTC Operating Mode	Read Only	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default:		Indicates the Current PTC Operating mode. Read/Write on comp mode.	PTC Operating Mode
42212	Active Transition Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown timer value of active timer	PTC Timers
42213	Hardware Version	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Indicates the hardware version of the board	Discrete Inputs
42214	Controller On Time	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: seconds Lower Limit: .000 sec. Upper Limit: 4294967295.000 sec Default: 0	Amount of time in seconds the controller has been powered	Controller Information

Addr.	System Name	Access	Specifications		Description	Function
42216	Genset Availability Status	Read Only	0: Not Available 1: Available 2: Unknown Default:		Indicates availability of generator set for Loading, as determined by the generator set sensors	PTC Availability
42217	Utility Availability Status	Read Only	0: Not Available 1: Available 2: Unknown Default:		Indicates availability of utility for loading as determined by the utility sensors	PTC Availability
42218	Gen CB Position Status	Read Only	0: Open 1: Closed 2: Not Available Default:		Generator set breaker position	Breaker Control
42219	Util CB Position Status	Read Only	0: Open 1: Closed 2: Not Available Default:		Utility breaker position	Breaker Control
42220	kVAR Load Reference	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	kVAR control reference value for extended paralleling	Master Load Control
42221	kVAR Load Setpoint Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: % Upper Limit: % Default:	Engineering units value for the kVAR load setpoint analog input	Analog Inputs
42222	kW Load Setpoint Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: % Upper Limit: % Default:	Engineering units value for the kW load setpoint analog input	Analog Inputs
42223	Power Factor Setpoint	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: Upper Limit: Default:	Power factor setpoint analog input value (uses kVAR load setpoint analog input)	Analog Inputs
42224	PTC State	Read Only	0: Not Enabled 1: No Source Connected 2: Utility Connected 3: Genset Connected 4: Paralleled Default:		Indicates the connected state of power transfer control. read / write in comp.	PTC State Machine

Addr.	System Name	Access	Specifications		Description	Function
42225	Sync Check Close Allowed	Read Only	0: Not Allowed 1: Allowed Default:		Indicates whether any sync check conditions have been met	Master Sync Control
42226	Sync Phase Difference	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: degrees Upper Limit: degrees Default:	Utility to generator set L1 voltage phase angle	Phase
42227	Synchronizer Status	Read Only	0: Synchronizer Off 1: Synchronizer On Default:		Indicates state of the synchronizer	Master Sync Control
42228	System Lock-out Status	Read Only	0: Inactive 1: Active Default:		Faults have occurred which prevent normal system operation; reset faults	System Information
42229	Breaker 1 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 1	Load Add Shed Control
42230	Breaker 2 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 2	Load Add Shed Control
42231	Breaker 3 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 3	Load Add Shed Control
42232	Breaker 4 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 4	Load Add Shed Control
42233	Breaker 5 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 5	Load Add Shed Control
42234	Breaker 6 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available		Indicates the position status of breaker 6	Load Add Shed Control
42235	Breaker 1 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available		Indicates trip status of breaker 1	Load Add Shed Control
42236	Breaker 2 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available		Indicates trip status of breaker 2	Load Add Shed Control

Addr.	System Name	Access	Specifications	Description	Function
42237	Breaker 3 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 3	Load Add Shed Control
42238	Breaker 4 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 4	Load Add Shed Control
42239	Breaker 5 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 5	Load Add Shed Control
42240	Breaker 6 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 6	Load Add Shed Control
42241	ATS 1 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 1	Load Add Shed Control
42242	ATS 2 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 2	Load Add Shed Control
42243	ATS 3 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 3	Load Add Shed Control
42244	ATS 4 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 4	Load Add Shed Control
42245	ATS 5 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 5	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42246	Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available		Indicates position status of ATS 6	Load Add Shed Control
42247	SID1 Status	Read Only	0: Missing 1: Good 2: Connecting 3: No EXP Board 4: Not Applicable Default:		Indicates status of SID1 (AUX 101 / 102 module 1)	Communications
42248	SID0 Status	Read Only	0: Missing 1: Good 2: Connecting 3: No EXP Board 4: Not Applicable Default:		Indicates status of SID0 (AUX 101 / 102 module 0)	Communications
42249	Expansion Board Communications	Read Only	0: Disable 1: Enable Default: Disable		Indicates the status of SID0 to expansion board connection	Communications
42250	Current Add Level	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Indicates the next level to add	Load Add Shed Control
42251	Current Shed Level	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Indicates the next level to shed	Load Add Shed Control
42252	Add Level 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates status of add level 1	Load Add Shed Control
42253	Add Level 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates status of add level 2	Load Add Shed Control
42254	Add Level 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates status of add level 3	Load Add Shed Control
42255	Add Level 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates status of add level 4	Load Add Shed Control
42256	Add Level 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates status of add level 5	Load Add Shed Control

Addr.	System Name	Access	Specifications	Description	Function
42257	Add Level 6 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 6	Load Add Shed Control
42258	Shed Level 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of shed level 1	Load Add Shed Control
42259	Shed Level 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of shed level 2	Load Add Shed Control
42260	Shed Level 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of shed level 3	Load Add Shed Control
42261	Shed Level 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of shed level 4	Load Add Shed Control
42262	Shed Level 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of shed level 5	Load Add Shed Control
42263	Manual Add Level 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 1	Load Add Shed Control
42264	Manual Add Level 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 2	Load Add Shed Control
42265	Manual Add Level 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 3	Load Add Shed Control
42266	Manual Add Level 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 4	Load Add Shed Control
42267	Manual Add Level 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 5	Load Add Shed Control
42268	Manual Add Level 6 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to add level 6	Load Add Shed Control
42269	Manual Shed Level 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to shed loads assigned to level 1	Load Add Shed Control
42270	Manual Shed Level 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to shed loads assigned to level 2	Load Add Shed Control
42271	Manual Shed Level 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to shed loads assigned to level 3	Load Add Shed Control
42272	Manual Shed Level 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator input to shed loads assigned to level 4	Load Add Shed Control

Addr.	System Name	Access	Specifications	Description	Function
42273	Manual Shed Level 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Operator Input to Shed Loads Assigned to Level 5	Load Add Shed Control
42274	Restored Shed Level 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates if shed level 1 has been restored	Load Add Shed Control
42275	Restored Shed Level 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates if shed level 2 has been restored	Load Add Shed Control
42276	Restored Shed Level 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates if shed level 3 has been restored	Load Add Shed Control
42277	Restored Shed Level 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates if shed level 4 has been restored	Load Add Shed Control
42278	Restored Shed Level 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates if shed level 5 has been restored	Load Add Shed Control
42279	Add Load 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 1	Load Add Shed Control
42280	Add Load 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 2	Load Add Shed Control
42281	Add Load 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 3	Load Add Shed Control
42282	Add Load 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 4.	Load Add Shed Control
42283	Add Load 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 5	Load Add Shed Control
42284	Add Load 6 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 6	Load Add Shed Control
42285	Shed Load 1 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates shed command for load 1	Load Add Shed Control
42286	Shed Load 2 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates shed command for load 2	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42287	Shed Load 3 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates shed command for load 3	Load Add Shed Control
42288	Shed Load 4 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates Shed Command for Load 4	Load Add Shed Control
42289	Shed Load 5 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates shed command for load 5	Load Add Shed Control
42290	Shed Load 6 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing		Indicates shed command for load 6	Load Add Shed Control
42291	Battery Voltage Engr Units Display Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default	Engineering units value for the battery voltage analog input	Analog Inputs
42292	kVAR Master Load Control Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default	Voltage level commanded to kVAR master load control analog output	Analog Inputs
42293	kW Master Load Control Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default	Voltage level commanded to kW master load control analog output	Analog Inputs
42294	Master Frequency Bias Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default	Voltage level commanded to master frequency bias analog output	Analog Inputs
42295	Master Voltage Bias Output Predictor Value	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default	Voltage level commanded to master voltage bias analog output	Analog Inputs
42296	PTC Genset Operating Mode	Read Only	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default		Indicates the current operating mode of the generator set	PTC Genset Operating Mode

Addr.	System Name	Access	Specifications		Description	Function
42297	PTC Transfer Pair Operating Mode	Read Only	0: Manual 1: Normal 2: Normal Override 3: Test 4: Utility Fail 5: Extended Parallel Default:		Indicates the current operating mode of the transfer pair	PTC Genset Operating Mode
42298	PTC Operating Transition Type	Read Only	0: Open Transition 1: Hard Closed Transition 2: Soft Closed Transition Default:		Indicates the transition type currently applicable to the PTC function operation	PTC Genset Operating Mode
42299	Expansion Board Communications 1	Read Only	0: Disabled 1: Enabled Default: Disabled		Indicates the status of the SID1 to expansion board connection	Communications
42300	System Topology	Read/Write	0: Master Synchronize Only 1: Isolated Bus w/ out GM 2: Isolated Bus w/GM 3: Common Bus 4: Transfer Pair 5: Component Mode Default: Master Synchronize Only		Main setting: sets system topology; control must be in manual to set	Application Configuration
42301	Transition Type	Read/Write	0: Open Transition 1: Hard Closed Transition 2: Soft Closed Transition Default: Open Transition		Sets the type of transition that will be used	Application Configuration
42302	Extended Parallel Enable	Read/Write	0: Disabled 1: Enabled Default: Disabled		Use to enable extended parallel operation	Application Configuration
42303	Load Demand Type	Read/Write	0: None 1: Fixed Sequence 2: Run Hours Default: None		Sets the load demand type	Load Demand Control
42304	Priority Control Method	Read/Write	0: Manual 1: Automatic Default: Manual		Set the priority control method	Priority Control
42305	Genset 01 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 1000	Sets generator 1 kW rating	System Information
42306	Genset 02 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 2 kW rating	System Information

Addr.	System Name	Access	Specifications		Description	Function
42307	Genset 03 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 3 kW rating	System Information
42308	Genset 04 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 4 kW rating	PC 3.x
42309	Genset 05 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 5 kW rating	System Information
42310	Genset 06 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 6 kW rating	System Information
42311	Genset 07 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 7 kW rating	System Information
42312	Genset 08 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 8 kW rating	System Information
42313	Genset 09 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 9 kW rating	System Information
42314	Genset 10 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 10 kW rating	System Information
42315	Genset 11 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 11 kW rating	System Information

Addr.	System Name	Access	Specifications		Description	Function
42316	Genset 12 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 12 kW rating	System Information
42317	Programmed Transition Delay (TDPT)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Seconds Lower Limit: .000 Seconds Upper Limit: 60.000 Seconds Default: 3	Set the programmed transition time delay	PTC Timers
42318	Transfer Delay (TDNE)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Seconds Lower Limit: .000 Seconds Upper Limit: 120.000 Seconds Default: 10	Sets the transfer time delay	PTC Timers
42319	Retransfer Delay (TDEN)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Seconds Lower Limit: .000 Seconds Upper Limit: 1800.000 Seconds Default: 600	Sets the transfer time delay	PTC Timers
42320	Maximum Parallel Time (TDMP)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Seconds Lower Limit: .000 Seconds Upper Limit: 1800.000 Seconds Default: 20	Sets the maximum parallel time for soft load transfers	PTC Timers
42321	Genset Bus %kW Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: -5.000% Upper Limit: 105.000% Default: 80	Generator set nominal voltage	Master Load Control
42322	Genset Nominal Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 45000.000 Volts Default: 480	Generator set nominal voltage	AC Setup
42323	Utility Nominal Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 45000.000 Volts Default: 480	Utility nominal voltage	AC Setup

Addr.	System Name	Access	Specifications		Description	Function
42324	Genset Center Frequency	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60	Sets the center frequency sensor bandwidth settings	PTC Sensors
42325	Utility Center Frequency	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60	Sets the center frequency sensor bandwidth settings	PTC Sensors
42326	test With Load Enable	Read/Write	0: Disable 1: Enable Default: Disable		Use to enable or disable load transfer during a Test	Application Configuration
42327	System Frequency	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: 45.000 Hz Upper Limit: 65.000 Hz Default: 60	Use to define the system nominal frequency	System Information
42328	Genset Bus kW Setpoint Source	Read/Write	0: Internal 1: Analog Input Default Internal		Selects where the generator set kW setpoint will come from for extended paralleling	Master Load Control
42329	Genset Bus kVAR Setpoint Source	Read/Write	0: Internal 1: Analog Input Default Internal		Selects where the generator set kVAR setpoint will come from for extended paralleling	Master Load Control
42330	Genset Bus kW Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32767.000 kW Default: 0	Set the base load kW setpoint in closed loop extended paralleling	Master Load Control
42331	Genset Bus kVAR Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kVAR Lower Limit: .000 kVAR Upper Limit: 32767.000 kVAR Default: 0	Sets the base load kVAR setpoint in closed loop extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42332	Genset Bus % kVAR Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: % Lower Limit: -5.000% Upper Limit: 105.000% Default: 0	Sets % kVAR generator output level for open loop base load extended paralleling	Master Load Control
42333	Genset Bus Power Factor Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: .700 Upper Limit: 1.000 Default: 1.00	Sets the desired generator set bus power factor in closed loop extended paralleling	Master Load Control
42334	Genset Un-loaded Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000kW Upper Limit: 32767.000 kW Default: 50	Setpoint for generator set unloaded level	Master Load Control
42335	Utility Bus kW Setpoint Source	Read/Write	0: Internal 1: Analog Input Default: Internal		Selects where the utility kW setpoint will come from for extended paralleling	Master Load Control
42336	Utility Bus kVAR Setpoint Source	Read/Write	0: Internal 1: Analog Input Default: Internal		Selects where the utility kVAR setpoint will come from for extended paralleling	Master Load Control
42337	Utility Bus kW Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000kW Upper Limit: 32767.000 kW Default: 100	Sets the peak Shave kW setpoint in closed loop extended paralleling	Master Load Control
42338	Utility Bus kW Constraint Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000kW Upper Limit: 32767.000 kW Default: 100	Sets the utility kW constraint level for base load extended paralleling	Master Load Control
42339	Utility Bus kVAR Setpoint	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000 kVAR Upper Limit: 32767.000 kVAR Default: 100	Sets the peak shave kVAR setpoint in closed loop extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42340	Utility Bus Power Factor Setpoint	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: NA Lower Limit: .700 Upper Limit: 1.000 Default: 1.00	Sets the desired utility bus power factor in loop extended paralleling	Master Load Control
42341	Utility Unloaded Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: -32768.000kW Upper Limit: 32767.000 kW Default: 50	Setpoint for utility unloaded level	Master Load Control
42342	Clear Fault History Table	Read/Write	0: Inactive 1: Active Default: Inactive		Use to completely clear the fault history table	Fault and Event Info
42343	Clear Occurrence Tables	Read/Write	0: Inactive 1: Active Default: Inactive		Use to completely clear the counters in faults and events occurrence tables	Fault and Event Info
42344	Genset Reset All Energy Meters	Read/Write	0: Do Nothing 1: Clear Counters Default: Do Nothing		Use to permanently clear all generator set energy meter values	Energy
42345	Utility Reset All Energy Meters	Read/Write	0: Do Nothing 1: Clear Counters Default: Do Nothing		Use to permanently clear all utility energy meter values	Energy
42346	Extended Paralleling kW Load Control Type	Read/Write	0: Genset Bus % Level (Open Loop) 1: Genset Bus kW (Closed Loop) 2: Genset Bus kW w/ Utility Constraint (Closed Loop) 3: Utility Bus kW (Closed Loop) Default: Genset Bus % Level (Open Loop)		Sets how and where the kW will be controlled for extended parallel operation	Master Load Control
42347	Extended Paralleling kVAR Load Control Type	Read/Write	0: Genset Controllers 1: Genset Bus % Level (Open Loop) 2: Genset Bus Power Factor (Open Loop) 3: Genset Bus kVAR (Closed Loop) 4: Genset Bus Power Factor (Closed Loop) 5: Utility Bus kVAR (Closed Loop) 6: Utility Bus Power Factor (Closed Loop) Default: Genset Controllers		Sets how and where the kVAR will be controlled for extended parallel operation	Master Load Control
42348	Extended Parallel Ramp Load Time	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 seconds Default: 60	Set ramp load time for extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42349	Fail To Sync Lockout Enable	Read/Write	0:Disabled 1:Enabled Default:Disable		Enable if want synchronizing to stop if fail to sync occurs	Master Sync Control
42350	Fail To Sync Open Transition Retransfer Enable	Read/Write	0:Disabled 1:Enabled Default:Disable		Use to enable or disable an open transition retransfer upon fail to sync	PTC State Machine
42351	Fail To Synchronize Time	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 seconds Default:120	Set the fill to synchronize diagnostic time delay	Master Sync Control
42352	Gen CB Manual Control	Read/Write	0: Closed Requested 1: No Command 2: Open Commanded Default: No Command		In manual mode can be used to semi-manually control the generator set breaker	Breaker Control
42353	Util CB Manual Control	Read/Write	0: Closed Requested 1: No Command 2: Open Commanded Default: No Command		In Manual Mode can be used to Semi-Manually Control the Utility Breaker	Breaker Control
42354	Slip Frequency	Read/Write	Multiplier: .001000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: seconds Lower Limit: -3.000 Hz Upper Limit: 3.000 Hz Default:0.1	Sets the Synchronizer Slip Frequency (used when Sync Method is Slip)	Master Sync Control
42355	Start Time Delay (TDES)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .000 seconds Upper Limit: 3600.000 seconds Default: 0	Sets the generator set Start Time Delay	PTC Operating Mode
42356	Stop Time Delay (TDEC)	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .000 seconds Upper Limit: 3600.000 seconds Default: 0	Sets the generator set Stop Time Delay	PTC Operating Mode
42357	Synchronizer Polarity	Read/Write	0: Normal 1: Invert Default: Normal		Use to Invert Synchronizer Polarity	Master Sync Control

Addr.	System Name	Access	Specifications		Description	Function
42358	Synchronize Method	Read/Write	0: Phase Match 1: Slip Frequency Default: Phase Match		Sets the synchronizing method	Master Sync Control
42359	Port Protocol Selection	Read/Write	0: PCCNet 1: MON Default: PCCNet		Allows protocol of the PCCNet port to be changed to MON for troubleshooting	Communications
42360	System Scheduler Enable	Read/Write	0: Disabled 1: Enabled Default: Disabled		Use to enable or disable the system scheduler	System Scheduler
42361	Load Add Shed Enable	Read/Write	0: Disabled 1: Enabled Default: Disabled		Use the enable or disable the load add shed feature	Load Add Shed Control
42362	Open Transition Retransfer Load Shed Enable	Read/Write	0: Disabled 1: Enabled Default: Disabled		Use to enable or disable the shedding of loads during open transition retransfer	Load Add Shed Control
42363	Auto/Manual Load Add Restore Mode	Read/Write	0: Auto 1: Manual Default: Auto		Indicates automatic or manual load add restore operation	Load Add Shed Control
42364	Genset Bus Load Add Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 60.000 second Default: 1	Indicates delay between add levels when all generator sets are online and no utility	Load Add Shed Control
42365	Utility Bus Load Add Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 60.000 second Default: 1	Indicates delay between add levels when on utility	Load Add Shed Control
42366	Load Shed Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 1.000 seconds Upper Limit: 10.000 seconds Default: 1	Indicates delay between shed levels when on generator sets	Load Add Shed Control
42367	Load 1 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 1 add shed control and status I/O	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42368	Load 2 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 2 add shed control and status I/O	Load Add Shed Control
42369	Load 3 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 3 add shed control and status I/O	Load Add Shed Control
42370	Load 4 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 4 add shed control and status I/O	Load Add Shed Control
42371	Load 5 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 5 add shed control and status I/O	Load Add Shed Control
42372	Load 6 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 6 add shed control and status I/O	Load Add Shed Control
42373	Load 1 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 1	Indicates which add level load 1 is assigned to	Load Add Shed Control
42374	Load 2 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 2	Indicates which add level load 2 is assigned to	Load Add Shed Control
42375	Load 3 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 3	Indicates which add level load 3 is assigned to	Load Add Shed Control
42376	Load 4 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 4	Indicates which add level load 4 is assigned to	Load Add Shed Control
42377	Load 5 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 5	Indicates which add level load 5 is assigned to	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42378	Load 6 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 6	Indicates which add level load 6 is assigned to	Load Add Shed Control
42379	Load 1 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 1	Indicates which shed level load 1 is assigned to	Load Add Shed Control
42380	Load 2 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 2	Indicates which shed level load 2 is assigned to	Load Add Shed Control
42381	Load 3 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 3	Indicates which shed level load 3 is assigned to	Load Add Shed Control
42382	Load 4 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 4	Indicates which shed level load 4 is assigned to	Load Add Shed Control
42383	Load 5 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 5	Indicates which shed level load 5 is assigned to	Load Add Shed Control
42384	Load 6 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 17.000 Default: 6	Indicates which shed level load 6 is assigned to	Load Add Shed Control
42385	Genset Bus Overload Method	Read/Write	0: Both kW and Frequency 1: kW Only 2: Frequency Only Default: Both kW and Frequency		Use to choose method for determining generator bus overload condition	System Information
42386	Genset Bus kW Overload Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: 80.000% Upper Limit: 140.000% Default: 105	Use to set the % kW threshold for generator bus overload condition	System Information

Addr.	System Name	Access	Specifications		Description	Function
42387	Genset Bus kW Overload Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 120.000 second Default: 60	Sets the delay time for overload based on kW	System Information
42388	Genset Bus Underfrequency Overload Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hz Lower Limit: .1000 Hz Upper Limit: 10.000 Hz Default: 3	Use to set the underfrequency offset threshold for generator bus overload condition	System Information
42389	Genset Bus Underfrequency Overload Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 20.000 second Default: 3	Sets the delay time for overload based on frequency	System Information
42390	Load Demand Enable	Read/Write	0: Disable 1: Enable Default: Disable		Use enable or disable the load demand feature	Load Demand Control
42391	Load Demand GenA	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen1		Sets GenA (never stop) for fixed sequence load demand	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42392	Load Demand GenB	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen2	Sets GenB (never stop) for fixed sequence load demand	Load Demand Control
42393	Load Demand GenC	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen3	Sets GenC (never stop) for fixed sequence load demand	Load Demand Control
42394	Load Demand GenD	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen4	Sets GenD (never stop) for fixed sequence load demand	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42395	Load Demand Initial Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: 1.000 minute Upper Limit: 60.000 minute Default: 5	Sets the Initial delay time before load demand will operate	Load Demand Control
42396	Load Demand Restart Percent	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: 20.000% Upper Limit: 100.000% Default: 80	Sets load demand restart threshold when method is %kW	Load Demand Control
42397	Load Demand Run Hours Differential	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: Hours Lower Limit: 1.000 Hours Upper Limit: 500.000 Hours Default: 50	Sets run hours differential for restart a generator set stopped due to load demand	Load Demand Control
42398	Load Demand Shutdown Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: 1.000 minute Upper Limit: 60.000 minute Default: 5	Sets the delay time between stopping generator sets due to load demand	Load Demand Control
42399	Load Demand Shutdown Percent	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: 20.000 % Upper Limit: 100.000 % Default: 60	Sets load demand shutdown threshold when method is %kW	Load Demand Control
42400	General Fail Time Delay	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: 10.000 seconds Upper Limit: 900.000 second Default: 59	Sets how long to wait for a generator set to come online before declaring it failed	Load Demand Control
42401	Util CB Fail to Close Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .100 seconds Upper Limit: 1.000 seconds Default: 0.26	Sets the utility breaker fail to close time delay	Breaker Control
42402	Util CB Fail to Open Delay	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .200 seconds Upper Limit: 5.000 seconds Default: 1	Sets the utility breaker fail to open time delay	Breaker Control

Addr.	System Name	Access	Specifications		Description	Function
42403	Util CB Re-charge Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .000 seconds Upper Limit: 60.000 seconds Default: 10	Sets time to allow for utility breaker recharge	Breaker Control
42404	Gen CB Fail to Close Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: seconds Lower Limit: .100 seconds Upper Limit: 1.000 seconds Default: 0.26	Sets the generator Set breaker fail to close time delay	Breaker Control
42405	Gen CB Fail to Open Delay	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .200 seconds Upper Limit: 5.000 seconds Default: 1	Sets generator set breaker fail to open time delay	Breaker Control
42406	Gen CB Re-charge Delay	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .000 seconds Upper Limit: 60.000 second Default: 10	Sets the time to allow for generator set breaker recharge	Breaker Control
42407	Permissive Phase Window	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: .100 degrees Upper Limit: 20.000 degrees Default: 10	Sets the permissive +/- phase angle window for sync check function	Master Sync Control
42408	Permissive Voltage Window	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: % Lower Limit: .500 % Upper Limit: 10.000 % Default: 5	Sets the permissive +/- voltage acceptance window for sync check function	Master Sync Control
42409	Permissive Window Time	Read/Write	Multiplier: .020000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: .500 seconds Upper Limit: 5.000 seconds Default: 0.5	Sets the permissive acceptance window dwell time for sync check function	Master Sync Control
42410	Permissive Frequency Window	Read/Write	Multiplier: .001000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: Hz Lower Limit: .001 Hz Upper Limit: 1.000 Hz Default: 1	Sets maximum frequency difference allowed for permissive close	Master Sync Control

Addr.	System Name	Access	Specifications		Description	Function
42412	Sync Phase Offset	Read/Write	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: degrees Lower Limit: -50.000 degrees Upper Limit: 50.000 degrees Default: 0	Sets a sync phase offset to accommodate sync across transformer with phase shift	Master Sync Control
42413	System Phase Rotation	Read/Write	0: L1-L2-L3 1: L1-L3-L2 Default: L1-L2-L3		Defines what the system phase rotation sequence is	System Information
42414	kW Kp	Read/Write	Multiplier: 1.0000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 1000.000 Default: 60	Proportional gain for kW closed loop control in extended paralleling	Master Load Control
42415	kW KI	Read/Write	Multiplier: 1.0000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 255.000 Default: 60	Integral gain for kW closed loop control in extended paralleling	Master Load Control
42416	kVAR Kp	Read/Write	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 1000.000 Default: 120	Proportional gain for kVAR closed loop control in extended paralleling	Master Load Control
42417	kVAR K1	Read/Write	Multiplier: 1.0000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 255.000 Default: 50	Integral gain for kVAR closed loop control in extended paralleling	Master Load Control
42418	Scheduler Program Select	Read/Write	Multiplier: 1.0000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 12.000 Default: 1	Selects which scheduler program to view or edit	System Scheduler
42419	Scheduler Program Enable	Read/Write	0: Disable 1: Enable Default: Disable		Use to enable or disable the selected program	System Scheduler
42420	Scheduler Program x Repeats Interval	Read/Write	0: Once 1: Every Week 2: Every 2 Weeks 3: Every 3 Weeks 4: Every 4 Weeks 5: Every 5 Weeks 6: First Week of the Month 7: Second Week of the Month 8: Third Week of the Month 9: Forth Week of the Month 10: Last Week of the Month Default: Once		use to adjust repeat interval for the selected program	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42421	Scheduler Program x Run Mode	Read/Write	0: No Load 1: With Load 2: Extended Parallel Default: No Load		Use to adjust run mode for the selected program	System Scheduler
42422	Scheduler Program x Start Day	Read/Write	0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday Default: Sunday		Use to adjust start day of week for the selected program	System Scheduler
42423	Scheduler Program x Start Hour	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: hour Lower Limit: .000 hour Upper Limit: 23.000 hour Default: 0	Use to adjust start hour for the selected program	System Scheduler
42424	Scheduler Program x Start Minute	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: .000 minute Upper Limit: 59.000 minute Default: 0	Use to adjust start minute for the selected program	System Scheduler
42425	Scheduler Program x Duration Hours	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: hour Lower Limit: .000 hour Upper Limit: 23.000 hour Default: 0	Use to adjust duration hours for the selected program	System Scheduler
42426	Scheduler Program x Duration Minutes	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: .000 minute Upper Limit: 59.000 minute Default: 0	Use to adjust duration minute for the selected program	System Scheduler
42427	Scheduler Exception Select	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 6.000 Default: 1	Selects which scheduler exception to view or edit	System Scheduler
42428	Scheduler Exception x Enable	Read/Write	0: Disable 1: Enable Default: Disable		Use to enable or disable the selected exception	System Scheduler
42429	Scheduler Exception x Repeat	Read/Write	0: Once Only 1: Every Year Default: Only Once		Use to adjust the repeat setting of the selected exception	System Scheduler

Addr.	System Name	Access	Specifications		Description	Function
42430	Scheduler Exception x Month	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: month Lower Limit: 1.000 month Upper Limit: 12.000 month Default: 1	Use to adjust the month of the selected exception	System Scheduler
42431	Scheduler Exception x Date	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: date Lower Limit: 1.000 date Upper Limit: 31.000 date Default: 1	Use to adjust the start date of the selected exception	System Scheduler
42432	Scheduler Exception x Hour	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: hour Lower Limit: .000 hour Upper Limit: 23.000 hour Default: 0	Use to adjust the start hour of the selected exception	System Scheduler
42433	Scheduler Exception x Duration Minute	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: .000 minute Upper Limit: 59.000 minute Default: 0	Use to adjust the start minute of the selected exception	System Scheduler
42434	Scheduler Exception x Duration Days	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: days Lower Limit: .000 days Upper Limit: 44.000 days Default: 0	Use to adjust the duration days of the selected exception	System Scheduler
42435	Scheduler Exception x Duration Hours	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: hour Lower Limit: .000 hour Upper Limit: 23.000 hour Default: 0	Use to adjust the duration hours of the selected exception	System Scheduler
42436	Scheduler Exception x Duration Minutes	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: .000: minute Upper Limit: 59.000: minute Default: 0	Use to adjust the duration minutes of the selected exception	System Scheduler
42437	Daylight Saving Time Enable	Read/Write	0: Disable 1: Enable Default: Disable		Enables the daylight savings time feature	Real Time Clock
42438	Load Demand Refresh Sequence Command	Read/Write	0: Do Nothing 1: Refresh Sequence Default: Do Nothing		Use to force a refresh of the active load demand sequence	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42439	Genset Connection Type	Read/Write	0: Wye 1: Delta Default: Wye		Delta or wye for generator set connection	AC Setup
42440	Genset PT Primary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 45000.000 Volts Default: 480	Generator set PT primary voltage	AC Setup
42441	Genset PT Secondary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 500.000 Volts Default: 120	Generator set PT secondary voltage	AC Setup
42442	Genset CT Primary Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Amps Lower Limit: 5.000 Amps Upper Limit: 25000.000 Volts Default: 100	Generator set CT primary current	AC Setup
42443	Genset CT Secondary Current	Read/Write	0: 1 Amp 1: 5 Amp Default: 5 Amp		Generator set CT secondary current	AC Setup
42444	Utility Connection Type	Read/Write	0: Wye 1: Delta Default: Wye		Delta or wye for utility connection	AC Setup
42445	Utility PT Primary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 45000.000 Volts Default: 480	Utility PT primary voltage	AC Setup
42446	Utility PT Secondary Voltage	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Volts Lower Limit: 100.000 Volts Upper Limit: 500.000 Volts Default: 120	Utility PT secondary voltage	AC Setup
42447	Utility CT Primary Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Amps Lower Limit: 5.000 Amps Upper Limit: 25000.000 Amps Default: 100	Utility CT primary current	AC Setup
42448	Utility CT Secondary Current	Read/Write	0: 1 Amp 1: 5 Amp Default: 5 Amp		Utility CT secondary current	AC Setup

Addr.	System Name	Access	Specifications		Description	Function
42449	Load Add Shed Re-quired Online Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32767.000 kW Default: 0	Generator set kW capacity that must be online to start timed load add : 0 disables this	Load Add Shed Control
42450	Load Demand Minimum On-line Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32767.000 kW Default: 0	Sets how much capacity must always be online regardless of what the load is	Load Demand Control
42451	Load Demand Restart Delay	Read/Write	Multiplier: .100000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 25.000 second Default: 1	Sets generator restart delay time to avoid nuisance restarts due to load transients	Load Demand Control
42452	Utility Available Current	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: Amps Lower Limit: 1.000 Amps Upper Limit: 32000.000 Amps Default: 1000	Use to set how many amps = 100% utility kW – used by bargraph	AC Setup
42453	Total Utility Capacity	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: S	Unit: kW Lower Limit: 1.000 kW Upper Limit: 32000.000 kW Default: 1000	Use to set hoe many kW = 100% utility kW – used by bargraph	AC Setup
42454	Nominal Battery Voltage	Read/Write	0: 12V 1: 24V Default: 24V		DC voltage provided to the control	Battery Voltage Protection
42455	24V High Battery Voltage Threshold	Read/Write	Multiplier: .010000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: VDC Lower Limit: 28.000 VDC Upper Limit: 34.000 VDC Default: 32	Sets 24V high battery voltage fault threshold	Battery Voltage Protection
42456	24V Low Battery Voltage Threshold	Read/Write	Multiplier: .010000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: VDC Lower Limit: 22.000 VDC Upper Limit: 26.000 VDC Default: 24	Sets 24V low battery voltage fault threshold	Battery Voltage Protection
42457	12V High Battery Voltage Threshold	Read/Write	Multiplier: .0100000000 Offset: 0 Size(bits): 16 Sign: U	Unit: VDC Lower Limit: 14.000 VDC Upper Limit: 17.000 VDC Default: 16	Sets 12V high battery voltage fault threshold	Battery Voltage Protection

Addr.	System Name	Access	Specifications		Description	Function
42458	12 V Low Battery Voltage Threshold	Read/Write	Multiplier: .010000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: VDC Lower Limit: 11.000 VDC Upper Limit: 13.000 VDC Default: 12	Sets 12V low battery voltage fault threshold	Battery Voltage Protection
42459	High Battery Voltage Set Time	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: second Lower Limit: 2.000 second Upper Limit: 60.000 second Default: 60	Sets high battery voltage set time	Battery Voltage Protection
42460	Low Battery Voltage Set Time	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: second Lower Limit: 2.000 second Upper Limit: 60.000 second Default: 60	Sets low battery voltage set time	Battery Voltage Protection
42461	Genset Online Capacity Sensor Enable	Read/Write	0: Disable 1: Enable Default: Disable		Used to enable or disable the generator set on-line capacity sensor	PTC Sensors
42462	Genset Online Capacity Sensor Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets the online kW threshold at which generator set bus is available for loading	PTC Sensors
42463	Nominal Battery Voltage Check Enable	Read/Write	0: Disable 1: Enable Default: Disable		Use to enable or disable the nominal battery voltage monitoring	Battery Voltage Protection
42464	Configurable Output1 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 1483	Event or fault code tied to configurable output 1	Discrete Outputs
42465	Configurable Output2 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 1457	Event or fault code tied to configurable output 2	Discrete Outputs
42466	Configurable Output3 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 2965	Event or fault code tied to configurable output 3	Discrete Outputs

Addr.	System Name	Access	Specifications		Description	Function
42467	Configurable Output4 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 2328	Event or fault code tied to configurable output 4	Discrete Outputs
42468	Configurable Output5 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 1121	Event or fault code tied to configurable output 5	Discrete Outputs
42469	Configurable Output6 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 1916	Event or fault code tied to configurable output 6	Discrete Outputs
42470	Configurable Output7 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 0	Event or fault code tied to configurable output 7	Discrete Outputs
42471	Configurable Output8 Code	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size(bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 65535.000 Default: 343	Event or fault code tied to configurable output 8	Discrete Outputs
42472	Gen Bus Base Load Status	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates that the generator bus is on base load extended paralleling	System Information
42473	Util Bus Peak Shave Status	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates that the utility bus is on peak shave extended paralleling	System Information
42474	Load 7 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 7 add shed control and status I/O	Load Add Shed Control
42475	Load 8 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 8 add shed control and status I/O	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42476	Load 9 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 9 add shed control and status I/O	Load Add Shed Control
42477	Load 10 Device Type	Read/Write	0: None 1: Breaker 2: ATS Default: None		Indicates type of load connected to load 10 add shed control and status I/O	Load Add Shed Control
42478	Load 7 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 17.000 Default: 7	Indicates which add level load 7 is assigned to	Load Add Shed Control
42479	Load 8 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 8	Indicates which add level load 8 is assigned to	Load Add Shed control
42480	Load 9 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 9	Indicates which add level load 9 is assigned to	Load Add Shed control
42481	Load 10 Add Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: 1.000 Upper Limit: 18.000 Default: 10	Indicates which add level load 10 is assigned to	Load Add Shed control
42482	Load 7 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 17.000 Default: 6	Indicates which shed level load 7 is assigned to	Load Add Shed control
42483	Load 8 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 17.000 Default: 7	Indicates which shed level load 8 is assigned to	Load Add Shed control
42484	Load 9 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 17.000 Default: 8	Indicates which shed level load 9 is assigned to	Load Add Shed control
42485	Load 10 Shed Level	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: .000 Upper Limit: 17.000 Default: 9	Indicates which shed level load 10 is assigned to	Load Add Shed control

Addr.	System Name	Access	Specifications		Description	Function
42486	Load Demand Threshold Method	Read/Write	0: %kW 1: kW Default: %kW		Selects whether to shutdown / restart generator sets based on %kW or absolute kW	Load Add Shed control
42487	Load Demand Restart kW Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 500	Sets minimum kW reserve capacity when threshold method is absolute kW	Load Add Shed control
42488	Load Demand Shutdown kW Threshold	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 1000	Sets maximum kW reserve capacity when threshold method is absolute kW	Load Add Shed control
42489	Load Demand GenE	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen5		Sets GenE for fixed sequence load demand	Load Demand Control
42490	Load Demand GenF	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen6		Sets GenF for fixed sequence load demand	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42491	Load Demand GenG	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen7		Sets GenG for fixed sequence load demand	Load Demand Control
42492	Load Demand GenH	Read/Write	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default: Gen8		Sets GenH for fixed sequence load demand	Load Demand Control
42494	Virtual Gen Main Fail to Open Delay	Read/Write	Multiplier: .200000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: 2.000 second Upper Limit: 30.000 second Default: 5	Sets how long to wait for generator set paralleling circuit breakers to open when no generator main	Breaker Control
42495	Genset 13 kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 13 kW rating	System Information
42496	Genset 14kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 14 kW rating	System Information

Addr.	System Name	Access	Specifications		Description	Function
42497	Genset 15kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 15 kW rating	System Information
42498	Genset 16kW Rating	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 32000.000 kW Default: 0	Sets generator 16 kW rating	System Information
42500	Fault Status BitMap 1	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: NA Lower Limit: Upper Limit: Default: 0	Bitmapped state of utility and other faults – 32 bits	Fault and Event Info
42502	Fault Status BitMap 2	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: NA Lower Limit: Upper Limit: Default: 0	Bitmapped state of generator set and other faults – 32 bits	Fault and Event Info
42504	Event Status BitMap 1	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: U	Unit: NA Lower Limit: Upper Limit: Default: 0	Bitmapped state of events – 32 bits	Fault and Event Info
42506	Genset Metering Fault Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default: 0	Bit mapped word with status of generator set AC metering out of range conditions	AC Interrupt Service
42507	Utility Metering Fault Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default: 0	Bit mapped word with status of utility AC metering out of range conditions	AC Interrupt Service
42600	Extended Parallel Start Vol	Read / Write	0: Stop 1: Start Default: Stop		State of extended parallel start volatile input	Discrete Inputs
42601	Synchronizer Enable Vol	Read / Write	0: Inactive 1: Active Default: Inactive		State of synchronizer enable volatile input	Discrete Inputs
42602	Utility Source Fail Vol	Read / Write	0: Inactive 1: Active Default: Inactive		State of utility source failure volatile input	Discrete Inputs
42603	Transfer Inhibit Vol	Read / Write	0: No Inhibit 1: Inhibit Default: No Inhibit		State of transfer inhibit volatile input	Discrete Inputs
42604	Retransfer Inhibit Vol	Read / Write	0: No Inhibit 1: Inhibit Default: No Inhibit		State of retransfer inhibit volatile input	Discrete Inputs

Addr.	System Name	Access	Specifications	Description	Function
42605	Gen CB Inhibit Vol	Read / Write	0: No Inhibit 1: Inhibit Default: No Inhibit	State of generator CB inhibit volatile input	Discrete Inputs
42606	Util CB Inhibit Vol	Read / Write	0: No Inhibit 1: Inhibit Default: No Inhibit	State of utility CB inhibit volatile input	Discrete Inputs
42607	Auto/Manual Vol	Read/ Write	0: Auto 1: Manual Default: Auto	State of auto/manual volatile input	Discrete Inputs
42608	Test Start Vol	Read/ Write	0: Stop 1: Start Default: Stop	state of test start volatile input	Discrete Inputs
42609	Fault Reset Vol	Read/ Write	0: No Reset 1: Reset Default: No Reset	state of fault reset volatile input	Discrete Inputs
42610	Override Vol	Read/ Write	0: No Override 1: Override Default: No Override	State of override volatile input	Discrete Inputs
42611	Extended Parallel Start Sw	Read Only	0: Stop 1: Start Default:	State of extended parallel start input	Discrete Inputs
42612	Synchronizer Enable Sw	Read Only	0: Inactive 1: Active Default:	State of synchronizer enable input	Discrete Inputs
42613	Utility Source Failure Sw	Read Only	0: Inactive 1: Active Default:	State of utility source failure input	Discrete Inputs
42614	Transfer Inhibit Sw	Read Only	0: No Inhibit 1: Inhibit Default:	Status of transfer inhibit input	Discrete Inputs
42615	Retransfer Inhibit Sw	Read Only	0: No Inhibit 1: Inhibit Default:	Status of retransfer inhibit input	Discrete Inputs
42616	Gen CB Inhibit Sw	Read Only	0: No Inhibit 1: Inhibit Default:	State of generator CB inhibit input	Discrete Inputs
42617	Unitl CB Inhibit Sw	Read Only	0: No Inhibit 1: Inhibit Default:	State of utility CB inhibit input	Discrete Inputs
42618	Auto/Manual Sw	Read Only	0: Auto 1: Manual Default:	State of auto / manual input	Discrete Inputs
42619	Test Start Sw	Read Only	0: Stop 1: Start Default:	State of test start input	Discrete Inputs
42620	Fault Reset Sw	Read Only	0: No Reset 1: Reset Default:	State of fault reset input	Discrete Inputs

Addr.	System Name	Access	Specifications	Description	Function
42621	Override Sw	Read Only	0: No Override 1: Override Default:	State of override input	Discrete Inputs
42622	Master Inhibit	Read Only	0: No Inhibit 1: Inhibit Default:	Indicates state of master priority inhibit	Priority Control
42623	Genset CB Tripped Sw	Read Only	0: Inactive 1: Active Default:	State of generator CB tripped input	Discrete Inputs
42624	Genset CB Tripped Vol	Read/Write	0: Inactive 1: Active Default: Inactive	State of generator CB tripped volatile input	Discrete Inputs
42625	Util CB Tripped Sw	Read Only	0: Inactive 1: Active Default:	State of Utility CB tripped input	Discrete Inputs
42626	Util CB Tripped Vol	Read/Write	0: Inactive 1: Active Default: Inactive	State of Utility CB tripped volatile input	Discrete Inputs
42627	Genset Phase Rotation	Read Only	0: L1-L2-L3 1: L1-L3-L2 Default:	Generator set phase rotation	Phase
42628	Utility Phase Rotation	Read Only	0: L1-L2-L3 1: L1-L3-L2 Default:	Utility phase rotation	Phase
42929	Gen1 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen1 CB position input	Discrete Inputs
42630	Gen1 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen1 CB volatile input	Discrete Inputs
42631	Gen2 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen2 CB position input	Discrete Inputs
42632	Gen2 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen2 CB volatile input	Discrete Inputs
42633	Gen3 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen3 CB position input	Discrete Inputs
42634	Gen3 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen3 CB volatile input	Discrete Inputs
42635	Gen4 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen4 CB position input	Discrete Inputs
42636	Gen4 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen4 CB volatile input	Discrete Inputs

Addr.	System Name	Access	Specifications	Description	Function
42637	Network Master Inhibit	Read/Write	0: No Inhibit 1: Inhibit Default: No Inhibit	Use to manually inhibit the module	Priority Control
42638	Gen5 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen5 CB position input	Discrete Inputs
42639	Gen5 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen5 CB position volatile input	Discrete Inputs
42640	Gen6 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen6 CB position input	Discrete Inputs
42641	Gen6 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen6 CB position volatile input	Discrete Inputs
42642	Gen7 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen7 CB position input	Discrete Inputs
42643	Gen7 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen7 CB position volatile input	Discrete Inputs
42644	Gen8 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen8 CB position input	Discrete Inputs
42645	Gen8 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen8 CB position volatile input	Discrete Inputs
42646	ATS 7 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 7	Load Add Shed Control
42647	ATS 8 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 8	Load Add Shed Control
42648	ATS 9 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 9	Load Add Shed Control

Addr.	System Name	Access	Specifications	Description	Function
42649	ATS 10 Position	Read Only	0: Not Available 1: No Source Connected 2: Source 1 Connected 3: Source 2 Connected 4: Paralleled Default: Not Available	Indicates position status of ATS 10	Load Add Shed Control
42650	Breaker 7 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 7	Load Add Shed Control
42651	Breaker 8 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 8	Load Add Shed Control
42652	Breaker 9 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 9	Load Add Shed Control
42653	Breaker 10 Position	Read Only	0: Open 1: Closed 2: Not Available Default: Not Available	Indicates position status of breaker 10	Load Add Shed Control
42654	Breaker 7 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 7	Load Add Shed Control
42655	Breaker 8 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 8	Load Add Shed Control
42656	Breaker 9 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 9	Load Add Shed Control
42657	Breaker 10 trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 10	Load Add Shed Control
42658	Gen9 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen9 CB position input	Discrete Inputs
42659	Gen9 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen9 CB position volatile input	Discrete Inputs
42660	Gen10 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen10 CB position input	Discrete Inputs

Addr.	System Name	Access	Specifications	Description	Function
42661	Gen10 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen10 CB position volatile input	Discrete Inputs
42662	Gen11 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen11 CB position input	Discrete Inputs
42663	Gen11 CB Position Vol	Read/Write	0: Breaker Open 1: Breaker Closed Default: Open	State of Gen11 CB position volatile input	Discrete Inputs
42664	Gen12 CB Position Sw	Read Only	0: Breaker Open 1: Breaker Closed Default:	State of Gen12 CB position input	Discrete Inputs

42695	Breaker 16 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available	Indicates trip status of breaker 16	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42696	Breaker 17 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available		Indicates trip status of breaker 17	Load Add Shed Control
42697	Breaker 18 Trip Status	Read Only	0: Not Available 1: Normal 2: Tripped Default: Not Available		Indicates trip status of breaker 18	Load Add Shed Control
42698	Load Add Shed Enable Status	Read Only	0: Disabled 1: Enabled 2: Paused Default:		Indicates the overall state of the load add shed function	Load Add Shed Control
42699	PCCNet Status	Read Only	0: No Connection 1: Connected 2: Connecting Default:		Indicates overall state of the PCCNet communications bus	Communications
42700	Gen1 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting For Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen1	Load Demand Control
42701	Gen2 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting For Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen2	Load Demand Control
42702	Gen3 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting For Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen3	Load Demand Control
42703	Gen4 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting For Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen4	Load Demand Control
42704	Gen1 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32 Sign:U	Unit:Hours Lower Limit:.000 Hours Upper Limit: 1193046.000 Hours Default:0	Total online time for Gen1	System Information

Addr.	System Name	Access	Specifications		Description	Function
42706	Gen2 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32	Unit:Hours Lower Limit: .000 Hours Upper Limit: 1193046.000 Hours Default:0	Total online time for Gen2	System Information
42708	Gen3 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32	Unit:Hours Lower Limit: .000 Hours Upper Limit: 1193046.000 Hours Default:0	Total online time for Gen3	System Information
42710	Gen4 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32	Unit:Hours Lower Limit: .000 Hours Upper Limit: 1193046.000 Hours Default:0	Total online time for Gen4	System Information
42712	GenA	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:		Indicates which generator set is currently GenA (never stops) for load demand	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42713	GenB	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:	Indicates which generator set is currently GenB for load demand	Load Demand Control
42714	GenC	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:	Indicates which generator set is currently GenC for load demand	Load Demand Control
42715	GenD	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:	Indicates which generator sets is currently GenD for load demand	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42716	Load Demand State	Read Only	0: Off 1: Initial Delay Timing 2: Load Monitor Default		Indicates operating state of the load demand control	Load Demand Control
42717	Total Number of Gensets Online	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Indicates how many of the generator sets are online which are sensed by CB position	System Information
42718	Total Spare Online Capacity	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Difference between sensed online capacity and generator set bus total kW	System Information
42719	Next Gen Shutdown Threshold	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Indicates kW threshold for generator bus at which next generator set will restart	Load Demand Control
42720	Next Gen Shutdown Threshold	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Indicates kW threshold for generator bus at which the next generator set will load demand stop	Load Demand Control
42721	Next Gen Restart	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:		Indicates which generator set is next to be restarted if load conditions are met	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42722	Next Gen Shutdown	Read Only	0: Gen1 1: Gen2 2: Gen3 3: Gen4 4: Gen5 5: Gen6 6: Gen7 7: Gen8 8: Gen9 9: Gen10 10: Gen11 11: Gen12 12: Gen13 13: Gen14 14: Gen15 15: Gen16 Default:		Indicates which generator set is next to be stopped if load conditions are met	Load Demand Control
42723	Load Demand Gen1 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:		Status of the load demand Gen1 driver output	Discrete Outputs
42724	Load Demand Gen2 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:		Status of the load demand Gen2 driver output	Discrete Outputs
42725	Load Demand Gen3 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:		Status of the load demand Gen3 driver output	Discrete Outputs
42726	Load Demand Gen4 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:		Status of the load demand Gen4 driver output	Discrete Outputs
42727	Genset Bus kW Overload Status	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Calculated kW overload threshold based on on-line capacity and % setting	System Information
42728	Genset Bus kW Overload Status	Read Only	0: No Overload 1: Overload Default:		Indicates whether generator bus is overloaded based on kW	System Information
42729	Genset Bus Underfrequency Overload Status	Read Only	0: No Overload 1: Overload Default:		Indicates whether generator bus is overloaded based on frequency	System Information

Addr.	System Name	Access	Specifications		Description	Function
42730	Active Schedule	Read Only	0: None 1: Program 1 2: Program 2 3: Program 3 4: Program 4 5: Program 5 6: Program 6 7: Program 7 8: Program 8 9: Program 9 10: Program 10 11: Program 11 12: Program 12 13: Exception 1 14: Exception 2 15: Exception 3 16: Exception 4 17: Exception 5 18: Exception 6 Default:		Indicates the currently active scheduler program or exception	System Scheduler
42731	Scheduler Run Command	Read Only	0: Off 1: No Load 2: With Load 3: Extended Parallel Default:		Indicates current run command coming from scheduler function	System Scheduler
42732	Modbus Bus Message Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Modbus message count	Communications
42733	Modbus CRC Error Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Modbus CRC error count	Communications
42734	Modbus Exception Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Modbus exception count	Communications
42735	Modbus No Response Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Modbus no response count	Communications
42736	Modbus Slave Message Count	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: NA Lower Limit: Upper Limit: Default:	Modbus slave message count	Communications

Addr.	System Name	Access	Specifications		Description	Function
42737	Modbus Clear Counters	Read/Write	0: Do Nothing 1: Clear Counters Default: Do Nothing		Clears all modbus counters	Communications
42738	Clock Mode	Read/Write	0: Normal 1: Set Clock 2: Save Clock Default: Normal		Use to set clock and save setting	Real Time Clock
42739	Clock Year	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: year Lower Limit: .000 year Upper Limit: 99.000 year Default: Read from RTC chip	Use to set or read current year	Real Time Clock
42740	Clock Month	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: month Lower Limit: 1.000 month Upper Limit: 12.000 month Default: Read from RTC chip	Use to set or read current month	Real Time Clock
42741	Clock Date	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: date Lower Limit: 1.000 date Upper Limit: 31.000 date Default: Read from RTC chip	Use to set or read current date	Real Time Clock
42742	Clock Hour	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: hour Lower Limit: 1.000 hour Upper Limit: 23.000 hour Default: Read from RTC chip	Use to set or read current hour	Real Time Clock
42743	Clock Minute	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: minute Lower Limit: 1.000 minute Upper Limit: 59.000 minute Default: Read from RTC chip	Use to set or read current minute	Real Time Clock
42744	Clock Second	Read/Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: second Lower Limit: .000 second Upper Limit: 59.000 second Default: Read from RTC chip	Use to set or read current second	Real Time Clock

Addr.	System Name	Access	Specifications		Description	Function
42745	Clock Day	Read Only	0: Sunday 1: Monday 2: Tuesday 3: Wednesday 4: Thursday 5: Friday 6: Saturday Default:		Indicates day of the week for current date	Real Time Clock
42746	Start Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown timer value for generator set start timer	PTC Operating Mode
42747	Stop Timer	Read Only	Multiplier: .100000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: seconds Lower Limit: seconds Upper Limit: seconds Default:	Countdown timer value for generator set stop timer	PTC Operating Mode
42748	Low Battery Voltage Threshold	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default:	Battery voltage with respect to set low battery threshold	Battery Voltage Protection
42749	High Battery Voltage Threshold	Read Only	Multiplier: .010000000000 Offset: 0 Size (bits): 16 Sign: U	Unit: VDC Lower Limit: VDC Upper Limit: VDC Default:	Battery voltage with respect to set high battery threshold	Battery Voltage Protection
42750	Gen5 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen5	Load Demand Control
42751	Gen6 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen6	Load Demand Control
42752	Gen7 Availability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:		For load demand use – indicates status of Gen7	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42753	Gen8 Avail- ability State	Read Only	0: Gen Does Not Exist 1: Offline 2: Waiting for Gen 3: Online 4: Failed Default:	For load demand use – indicates status of Gen8	Load Demand Control
42754	Load Demand Gen5 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen5 driver output	Discrete Out- puts
42755	Load Demand Gen6 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen6 driver output	Discrete Out- puts
42756	Load Demand Gen7 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen7 driver output	Discrete Out- puts
42757	Load Demand Gen8 Driver Status	Read Only	0: Run 1: Load Demand Stop Default:	Status of the load demand Gen8 driver output	Discrete Out- puts
42758	GenE	Read Only	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default:	Indicates which generator set is currently GenE for load demand	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42759	GenF	Read Only	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default:	Indicates which generator set is currently GenF for load demand	Load Demand Control
42760	GenG	Read Only	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default:	Indicates which generator set is currently GenG for load demand	Load Demand Control
42761	GenH	Read Only	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default:	Indicates which generator set is currently GenH for load demand	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42762	Add Level 7 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 7	Load Add Shed Control
42763	Add Level 8 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 8	Load Add Shed Control
42764	Add Level 9 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 9	Load Add Shed Control
42765	Add Level 10 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates status of add level 10	Load Add Shed Control
42766	Add Load 7 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 7	Load Add Shed Control
42767	Add Load 8 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 8	Load Add Shed Control
42768	Add Load 9 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 9	Load Add Shed Control
42769	Add Load 10 Command	Read Only	0: Do Nothing 1: Add Level Default: Do Nothing	Indicates add command for load 10	Load Add Shed Control
42770	Shed Level 6 Command	Read Only	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 6	Load Add Shed Control
42771	Shed Level 7 Command	Read Only	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 7	Load Add Shed Control
42772	Shed Level 8 Command	Read Only	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 8	Load Add Shed Control
42773	Shed Level 9 Command	Read Only	0: Do Nothing 1: Shed Level Default: Do Nothing	Indicates status of shed level 9	Load Add Shed Control
42774	Shed Load 7 Command	Read Only	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 7	Load Add Shed Control
42775	Shed Load 8 Command	Read Only	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 8	Load Add Shed Control
42776	Shed Load 9 Command	Read Only	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 9	Load Add Shed Control
42777	Shed Load 10 Command	Read Only	0: Do Nothing 1: Shed Load Default: Do Nothing	Indicates shed command for load 10	Load Add Shed Control

Addr.	System Name	Access	Specifications		Description	Function
42778	Restore Shed Level 6 Command	Read Only	0: Do Nothing 1: Restore Level Default: Do Nothing		Indicates if shed level 6 has been restored	Load Add Shed Control
42779	Restore Shed Level 7 Command	Read/Write	0: Do Nothing 1: Restore Level Default: Do Nothing		Indicates if shed level 7 has been restored	Load Add Shed Control
42780	Restore Shed Level 8 Command	Read/Write	0: Do Nothing 1: Restore Level Default: Do Nothing		Indicates if shed level 8 has been restored	Load Add Shed Control
42781	Restore Shed Level 9 Command	Read/Write	0: Do Nothing 1: Restore Level Default: Do Nothing		Indicates if shed level 9 has been restored	Load Add Shed Control
42782	Gen5 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32 Sign: U	Unit: hours Lower Limit: .000 hours Upper Limit: 1193046.000 hours Default: 0	Total online time for Gen5	System Information
42784	Gen6 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32 Sign: U	Unit: hours Lower Limit: .000 hours Upper Limit: 1193046.000 hours Default: 0	Total online time for Gen6	System Information
42786	Gen7 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32 Sign: U	Unit: hours Lower Limit: .000 hours Upper Limit: 1193046.000 hours Default: 0	Total online time for Gen7	System Information
42788	Gen8 Online Time	Read Only	Multiplier: .000277777780 Offset: 0 Size (bits): 32 Sign: U	Unit: hours Lower Limit: .000 hours Upper Limit: 1193046.000 hours Default: 0	Total online time for Gen8	System Information
42790	Manual Add Level 7 Command	Read/Write	0: Do Nothing 1: Add Level Default: Do Nothing		Operator input to add loads assigned to level 7	Load Add Shed Control
42791	Manual Add Level 8 Command	Read/Write	0: Do Nothing 1: Add Level Default: Do Nothing		Operator input to add loads assigned to level 8	Load Add Shed Control
42792	Manual Add Level 9 Command	Read/Write	0: Do Nothing 1: Add Level Default: Do Nothing		Operator input to add loads assigned to level 9	Load Add Shed Control
42793	Manual Add Level 10 Command	Read/Write	0: Do Nothing 1: Add Level Default: Do Nothing		Operator input to add loads assigned to level 10	Load Add Shed Control

Addr.	System Name	Access	Specifications	Description	Function
42794	Manual Shed Level 6 Command	Read/Write	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 6	Load Add Shed Control
42795	Manual Shed Level 7 Command	Read/Write	0: Do Nothing 1: Shed Level Default: Do Nothing	Operator input to shed loads assigned to level 7	Load Add Shed Control

42922	Load Demand GenM	Read /Write	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default: Gen13	Sets GenM for fixed sequence load demand	Load Demand Control

Addr.	System Name	Access	Specifications	Description	Function
42923	Load Demand GenN	Read /Write	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default: Gen14	Sets GenN for fixed sequence load demand	Load Demand Control
42924	Load Demand GenO	Read /Write	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default: Gen15	Sets GenO for fixed sequence load demand	Load Demand Control
42925	Load Demand GenP	Read /Write	0: Gen 1 1: Gen 2 2: Gen 3 3: Gen 4 4: Gen 5 5: Gen 6 6: Gen 7 7: Gen 8 8: Gen 9 9: Gen 10 10: Gen 11 11: Gen 12 12: Gen 13 13: Gen 14 14: Gen 15 15: Gen 16 Default: Gen16	Sets GenP for fixed sequence load demand	Load Demand Control

Addr.	System Name	Access	Specifications		Description	Function
42926	SID2 Status	Read Only	0: Missing 1: Good 2: Connecting 3: No Exp Board 4: Not Applicable Default:		Indicates status of SID2 (aux101/102 module 2)	Communications
42927	SID3 Status	Read Only	0: Missing 1: Good 2: Connecting 3: No Exp Board 4: Not Applicable Default:		Indicates status of SID3 (aux101/102 module 3)	Communications
42928	Expansion Board Communications 2	Read Only	0: Disabled 1: Enabled 2: Connecting Default: Disabled		Indicates the status of the SID2 to expansion board connection	Communications
42929	Expansion Board Communications 3	Read Only	0: Disabled 1: Enabled 2: Connecting Default: Disabled		Indicates the status of the SID3 to expansion board connection	Communications
42930	Utility Breaker Opening Point	Read /Write	0: After Transfer Delay 1: Upon Utility Failure Default: After Transfer Delay		PTC – point in time at which system opens utility breaker	PTC Connected
42931	Commit To Transfer Method	Read /Write	0: Utility Disconnect 1: Genset Start 2: No Commit Default: Utility Disconnect		PTC – sets point at which system commits to transfer to generator set	PTC Operating Mode
42932	Commit To Transfer State	Read Only	0: Not Committed 1: Committed Default:		PTC – indicates if system is committed to transferring to generator set	PTC Operating Mode
42933	Total System Capacity 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of the generator set kW ratings in 32bit	System Information
42935	Total Online Capacity 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Sum of the generator set kW ratings in 32bit for generator sets which are online	System Information
42937	kW Load Reference 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	kW control reference value in 32bit for extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42939	kVAR Load Reference 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: kVAR Upper Limit: kVAR Default:	kVAR control reference value in 32bit for extended paralleling	Master Load Control
42943	Genset Bus kW Setpoint 32bit	Read /Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kW Default: 0	Sets the base load kW setpoint in 32bit in closed loop extended paralleling	Master Load Control
42945	Genset Bus kVAR Setpoint 32bit	Read /Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: .000 kVAR Upper Limit: 2147483647.000 kVAR Default: 0	Sets the base load kVAR setpoint in 32bit in closed loop extended paralleling	Master Load Control
42947	Genset Un-loaded Level 32bit	Read /Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: -2147483648.000 kW Upper Limit: 2147483647.000 kW Default: 50	Setpoint for generator set unloaded level in 32bit	Master Load Control
42949	Utility Bus kW Setpoint 32bit	Read /Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: -2147483648.000 kW Upper Limit: 2147483647.000 kW Default: 100	Sets the peak shave kW setpoint in 32bit in closed loop extended paralleling	Master Load Control
42951	Utility Bus kW Constraint Level 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: -2147483648.000 kW Upper Limit: 2147483647.000 kW Default: 100	sets the utility kW constraint level in 32bit for base load extended paralleling	Master Load Control
42953	Utility Bus kVAR Setpoint 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kVAR Lower Limit: -2147483648.000 kVAR Upper Limit: 2147483647.000 kVAR Default: 100	Sets the peak shave kVAR setpoint in 32bit in closed loop extended paralleling	Master Load Control

Addr.	System Name	Access	Specifications		Description	Function
42955	Utility Un-loaded Level 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: -2147483648.000 kW Upper Limit: 2147483647.000 kW Default: 50	Setpoint for utility unload level in 32bit	Master Load Control
42957	Load Add Shed Re-quired Online Capacity 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kW Default: 0	generator set kW capacity that must be online to start timed load add; 0 disables this	Load Demand Control
42959	Load Demand Minimum On-line Capacity 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kW Default: 0	Sets how much capacity must always be online regardless of what the load is	Load Demand Control
42961	Total Utility Capacity 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: 1.000 kW Upper Limit: 2147483647.000 kW Default: 1000	Use to set how many kW (32bit) =100% utility kW -- used by bar-graph	AC Setup
42963	Genset Online Capacity Sensor Threshold 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kW Default: 0	Set the online kW threshold 32bit at which generator set but is available for loading	PTC Sensors
42965	Load Demand Restart kW Threshold 32bit	Read /Write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kW Default: 500	Set minimum kW reserve capacity when kW in 32bit	Load Demand Control
42967	Load Demand Shutdown kW Threshold 32bit	Read / write	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: .000 kW Upper Limit: 2147483647.000 kw Default: 1000	Sets maximum kW reserve capacity when threshold method is absolute kW in 32bit	Load Demand Control
42971	Total Spare Online Capacity 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Difference between sensed online capacity and generator Set bus total kW in 32bit	System Information

Addr.	System Name	Access	Specifications		Description	Function
42973	Next Gen Re-start Threshold 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Shows 32 bit kW threshold for generator bus at which next generator set will re-start	Load Demand Control
42975	Next Gen Shutdown Threshold 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size (bits): 32 Sign: S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Shows 32 bit kW threshold for generator bus at which next generator set load demand stops in	Load Demand Control
42977	Genset Bus kW Overload Threshold 32bit	Read Only	Multiplier: 1.000000000000 Offset: 0 Size(bits): 32 Sign:S	Unit: kW Lower Limit: kW Upper Limit: kW Default:	Calculated kW overload threshold in 32bit based on online capacity and % setting	System Information

11. MCM3320 Modbus Fault Status Bitmaps

Note: Earlier versions of software may not support all of the Modbus registers in the following table. If a particular register is not available in your installation, it is possible that the Modbus connection is working but the controller software does not support that particular register.

Note: If an address or bit is not listed in this table it is not used.

Addr.	Bit#	System Name	Fault Code	Event Name	Response
42500	0	Fault Status Bit-map 1	1455	Utility Main Breaker Position Contact Warning	Warning
42500	1	Fault Status Bit-map 1	2396	Utility Main Breaker Fail To Close Warning	Warning
42500	2	Fault Status Bit-map 1	2397	Utility Main Breaker Fail To Open Warning	Warning
42500	3	Fault Status Bit-map 1	1219	Utility Main Breaker Tripped Warning	Warning
42500	4	Fault Status Bit-map 1	1914	Utility Bus Phase Rotation Warning	Warning
42500	5	Fault Status Bit-map 1	1912	Utility Bus Loss Of Phase Warning	Warning
42500	6	Fault Status Bit-map 1	2331	Utility Bus Undervoltage Warning	Warning
42500	7	Fault Status Bit-map 1	2358	Utility Bus Overvoltage Warning	Warning
42500	8	Fault Status Bit-map 1	1223	Utility Bus Frequency Warning	Warning
42500	21	Fault Status Bit-map 1	4137	Advanced Grid Protection Warning	Warning
42500	22	Fault Status Bit-map 1	3924	Utility Reverse kW Warning	Warning
42500	23	Fault Status Bit-map 1	2939	Modbus Communication Failure Warning	Warning
42500	24	Fault Status Bit-map 1	2648	Remote IO Communication Failure Warning	Warning
42500	25	Fault Status Bit-map 1	1689	Real Time Clock Power Interrupt Warning	Warning
42500	26	Fault Status Bit-map 1	1335	AC Metering Out Of Range Warning	Warning
42500	27	Fault Status Bit-map 1	1999	Maximum Parallel Time Warning	Warning
42500	28	Fault Status Bit-map 1	343	Hardware Failure Warning	Warning

Addr.	Bit#	System Name	Fault Code	Event Name	Response
42500	29	Fault Status Bit-map 1	1456	Synchronizer Output Limit Warning	Warning
42500	30	Fault Status Bit-map 1	2416	Calibration Checksum Warning	Warning
42500	31	Fault Status Bit-map 1	353	EEPROM Write Error Warning	Warning
42502	0	Fault Status Bit-map 2	1454	Genset Main Breaker Position Contact Warning	Warning
42502	1	Fault Status Bit-map 2	1452	Genset Main Breaker Fail To Close Warning	Warning
42502	2	Fault Status Bit-map 2	1453	Genset Main Breaker Fail To Open	Warning
42502	3	Fault Status Bit-map 2	1328	Genset Main Breaker Tripped Warning	Warning
42502	4	Fault Status Bit-map 2	1915	Genset Bus Phase Rotation Warning	Warning
42502	5	Fault Status Bit-map 2	1913	Genset Bus Loss Of Phase Warning	Warning
42502	6	Fault Status Bit-map 2	1225	Genset Bus Undervoltage Warning	Warning

THIS PAGE LEFT INTENTIONALLY BLANK

12. MCM3320 Modbus Address 42506, 42507

Metering Fault Status Bitmaps		
Bit (LSB = 0)	Parameter	Description
0	ZXA Timeout	Zero Crossing cannot be detected on L1 voltage signal
1	ZXB Timeout	Zero Crossing cannot be detected on L2 voltage signal
2	ZXC Timeout	Zero Crossing cannot be detected on L3 voltage signal
3 (See Note 1)	Voltage Out of Range	Voltage scaling error due to incompatible combination of settings for Nominal Voltage, PT Primary Voltage, and PT Secondary Voltage
4 (See Note 1)	Current Out of Range	Current Input is saturated; actual current cannot be determined
5	Frequency Out of Range	Frequency input is out of range; valid range 24–80 Hz
6	Loss Phase Out of Range	One or more zero crossings of voltage cannot be detected; loss phase cannot be determined
7	Sync Phase Out of Range	Synchronizer phase difference cannot be measured due to any of the following: genset frequency out of range, utility frequency out of range, genset L1 voltage zero crossing not detected, or utility L1 voltage zero crossing not detected
8 (See Note 1)	kW Out of Range	kW is out of range; valid range is – 2147483648 to +2147483647 kW
9 (See Note 1)	kVAR Out of Range	kVAR is out of range; valid range is – 2147483648 to +2147483647 kVAR
10 (See Note 1)	kVA Out of Range	kVA is out of range; valid range is 0 to 4294867295 kVA
11 (See Note 1)	Power Factor Out of Range	Power factor is out of range due to either kW > kVA or kVA = 0; should not normally occur
12	AC Metering Failure	Main processor is unable to communicate with metering processor
13	Not Used	
14	Not Used	
15	Not Used	

Note:

1. If any of bits are active (1), the “AC Metering Out of Range Warning” fault will be active.
2. If Bit 12 is active (1), the “Hardware Failure Warning” fault will be active.
3. Some bits do not generate warning faults because they are a normal occurrence (e.g. if a source is dead).

Last Successful Communication (Seconds, Milliseconds)	40128	U	Bitfield	See Note 5

Notes:

1. Modbus TCP can be enabled/disabled in the PC500/550 User Interface (Setup > Modbus Settings).
2. Default Modbus TCP port is 502 and is configurable in the PC500/550 User Interface (Setup > Modbus Settings). No more than 2 Modbus TCP sessions can be established at a time.
3. PC5xx provides READ ONLY access over Modbus TCP
4. PC500/550 registers return details about all configured devices in PC5xx (Generator Set, ATS AUX101/102) and can be accessed using Modbus TCP Unit ID 255 (default for PC500/550).
5. In PC500/550 registers, Devices 1 through 12 are numbered in the same order as they are arranged in the Interface Device Configuration grid. To access details of these devices over Modbus TCP, the user must use the Modbus TCP Unit ID (returned by register 4xxx3) in the query.
6. Bitmap registers indicating Last Successful Communication (4xxx6, 4xxx7, 4xxx8) are formatted as below:

7. Site IOs (sensors) and AUX101/102 data cannot be accessed over Modbus TCP.

14. AUX101/102 Modbus Register Map

Addr.	System Name	Access	Specifications		Comments
43044	Modbus De- vice ID	Read Only	As supported by Modbus protocol	Default: Modbus Ad- dress 13 Type: Trim	Changing the address causes no communication with the annun- ciator until the Modbus Master also changes its sending address.
43045	Modbus Baud Rate	Read Only	0: 2400 Baud 1: 4800 Baud 2: 9600 Baud 3: 19200 Baud 4: 38400 Baud 5: 57600 Baud	Default: 3 Type: Trim	Changing the baud rate causes no communication with the an- nunciator until the Modbus Master also changes its baud rate.
43046	Modbus Parity	Read Only	0: Even 1: Odd 2: None	Default: 2 Type: Trim	Changing the parity causes no communication with the annun- ciator until the Modbus Master also changes its parity.
43047	Modbus Stop Bits	Read Only	1 2	Default: 1 Type: Trim	Changing the stop bits causes no communication with the annun- ciator until the Modbus Master also changes its stop bits.
43048	Protocol	Read Only	0: RS485 1: Modbus	Default: 0 Type: Trim	Changes the communication pro- tocol between RS485 and Mod- bus.
43049	Software Ver- sion	Read Only		Default: NA Type: Trim	Sends AUX101 current firmware version.
43050	Device Type	Read Only		Default: 59 Type: Trim	AUX101 Device Type
43051	AUX 102 Available	Read Only	0: Not Available 1: Available	Default: 0 Type: Trim	Indicates if AUX102 expansion board is available.
43052	Save Trims	Read/ Write	0: Do Nothing 1: Save Trims	Do Nothing Type: Trim	Saves adjustments to non-vola- tile memory. Perform Save Trims after all configurations have been updated.
42001	Relay 1 Relay 2 Relay 3 Relay 4 Relay 5 Relay 6 Relay 7 Relay 8	Read/ Write	0: Inactive 1: Active	Default: 0	Parameters to allow the Relay to be turned on/off. The lower 8 bits are used to store out relay values. Relay 1 is stored in bit 0 and Relay 8 is stored in bit 7. The up- per 8 bits are 0. In the event of a power cycle or reboot, all the out- put values are reset to 0. This re- gister is used as heartbeat for AUX101 and indicates a secure communication.

Addr.	System Name	Access	Specifications		Comments
42009	Relay 9	Read/ Write	0: Inactive 1: Active	Default: 0	Parameters to allow the Relay to be turned on/off.
